NATURAL FEATURES AND RESOURCES. Australia is approximately equal in area to the United States and is more than three-fourths the size of Europe. Much of the continent is an arid plain with neither high mountains nor large forests. The coast line is unusually regular, but two great peninsulas jut out toward New Guinea in the north—Cape York Peninsula and Arnhem Land. Between them lies the Gulf of Carpentaria. A wide bay, the Great Australian Bight, cuts into the south coast. Along the east coast, ranges of mountains run from north to south, reaching their highest point in Mt. Kosciusko (7,352 ft.). West of the mountains are three plains, one drained by the Murray and Darling Rivers which flow into the sea southeast of Adelaide, the second draining into Lake Eyre, a salt lake, and the third—a tropical plain—bordering the Gulf of Carpentaria. The western half of the continent is occupied by a desert plateau which rises into barren, rolling hills near the west coast. It includes the Great Victoria Desert, to the south, and the Great Sandy Desert to the north. The island of Tasmania (26,215 sq. mi.), lying off the southeastern coast, is largely a plateau.

Australia possesses considerable mineral resources. The value of mineral output (1943-44) was £27,459,375. Most important is gold (1945 output: 635,000 ounces). Second in importance is coal, mined near Sydney, near Brisbane and in eastern Tasmania (1945 output: 14,328,000 tons). The Broken Hill mines in New South Wales are one of the most valuable silver-lead-zinc areas in the world. Silver production in 1945 was approximately 9,400,000 fine ounces; lead, 177,000 short tons; and zinc, 93,800 tons. Other important minerals include tin (1945: 2,800 tons), copper (1944: 31,360 tons) and iron ore.

Forest products include timber (rough sawn), eucalyptus oil, sandalwood oil, tan bark and yacca gum. Sea products include bêche-de-mer, oysters, pearls, pearl shell, tortoise shell and agar-agar.

CLIMATE. The northern third of the country lies within the torrid zone and the remainder within the south temperate zone. The coolest portion of the mainland (Victoria) is not unlike Spain and south Italy. The average temperature for Australia as a whole is 70°, and the northern coastal areas average 82°. Only in the center of the continent does the annual range of temperature exceed 30°. Large areas of the continent receive less than 10 inches of rain. The eastern highlands and Victoria are the best-watered regions.

PAPUA (British New Guinea)—Status: Territory under Australian administration.

Administrator: Hubert L. Murray.

Capital: Port Moresby (population 2,628).

Chief exports: rubber, gold.

Agricultural products: coconuts, rubber, copra.

Minerals: gold, silver.

Comprising the southeastern part of the island of New Guinea, with the islands of the D'Entrecasteaux, Louisiade and adjoining groups, Papua was annexed by Queensland in 1883 and by the British Crown in 1888. It came under the control of the Australian Commonwealth in 1901 and became the Territory of Papua in 1906. Japan invaded Papua in early 1942, but with the capture of Buna in December, 1942, Australian control was restored.

In 1940 there were 1,822 Europeans in the territory. About 280,000 acres of land have been leased, chiefly by planters, and more than 62,000 acres are cultivated.

OCEANIA

FIJI—Status: Colony.

Capital: Suva (population 15,522).

Foreign trade (1945): exports, \$7,892,500; imports, \$9,515,700. **Chief exports:** gold, sugar.

Agricultural products: sugar (exports 1946: 106,473 long tons), copra, bananas, molasses.

Mineral: gold (1946: 68,859 oz.).

Fiji colony consists of an archipelago of from 200 to 250 islands in the South Pacific Ocean about 1,740 miles northeast of Sydney, Australia. The larger islands, including Viti Levu (4,053 sq. mi.) and Vanua Levu (2,130 sq. mi.) are mountainous and of volcanic origin. The archipelago was ceded to Great Britain by the native ruler in 1874.

The population (1946) included 117,501 Fijians and 120,063 British Indians. Importation of the latter to work the sugar plantations has led to important social and economic changes. There has been almost no intermarriage between Fijians and Indians, and considerable ill feeling has developed between them.

During World War II, the archipelago was an important air and naval station on the route from the U. S. west coast and Hawaii to Australia and New Zealand.

Fiji has a pleasant climate, with the temperature seldom leaving the 60°-90° range; rainfall is heavy in the southeastern three quarters of the archipelago, averaging 10-12 ft. annually, but is almost nil in the northwestern quarter.

GILBERT AND ELLICE ISLANDS—Status: Colony.

The islands in these groups (including the Gilbert group; the Ellice group; Ocean Island [the seat of administration], Fanning, Washington and Christmas Islands; and the Phoenix group) were proclaimed a British protectorate in 1892 and annexed as a colony in 1915. The colony is administered by the High Commissioner for the Western Pacific through a Resident Commissioner. The most important product is high-grade phosphate, produced on Ocean Island (1941: 347,664 tons). Ownership of Canton and Enderbury islands in the Phoenix group was long disputed by Great Britain and the United States until 1938, when an agreement for "use in common" was reached by the two governments. Several of the Gilbert islands were occupied by Japanese forces in World War II, and Tarawa was the scene of one of the fiercest battles in U. S. Marine Corps history in Nov., 1943, when it was retaken from the Japanese.

NAURU—Status: Joint Mandate.

This small island (8 sq. mi.), an important source of phosphate, was annexed by Germany in 1888 and was placed under joint Australian, New Zealand and British mandate after World War I. It lies about 2,215 miles northeast of Sydney and to the northeast of the Solomon Islands.

NEW GUINEA, Territory of—Status: Under United Nations trusteeship.

Seat of administration: Port Moresby.

Administrator: J. K. Murray.

Chief export: gold.

Agricultural products: coconuts, cacao.

Minerals: gold, silver, platinum.

The northern section of eastern New Guinea (about 93,000 sq. mi.) was mandated in 1920 by the League of Nations to the government of the Commonwealth of Australia, together with the Bismarck archipelago (New Britain, New Ireland and adjacent islands), the Admiralty Islands with several outlying groups, and the northern Solomon Islands (Bougainville and Buka). It was placed under United Nations trusteeship Dec. 13, 1946, but Australia continues to be the administering power. The administrator advises the governor general of Australia, who can legislate

by ordinance. Indirect rule by native chiefs has been continued. Japanese troops occupied much of the territory 1942-45.

New Zealand (Dominion)

Area: 103,415 square miles (104,241 including outlying and annexed islands).

Population (1945): 1,746,319 (1936: European, 94.3%; Maori and half-caste, 5.2%; others [Chinese, Syrian, etc.], .5%).

Density per square mile: 16.8.

Governor General: Sir Bernard Freyberg.

Prime Minister: Peter Fraser.

Principal cities (census 1945): Auckland (greater), 256,426 (seaport and naval base); Wellington (greater), 175,189 (capital); Christchurch, 112,525 (cereals, stock raising); Dunedin City, 65,487 (textiles, meat freezing).

Monetary unit: New Zealand pound (£NZ).

Language: English.

Religions (census 1936): Church of England, 39.75%; Presbyterian, 23.44%; Roman Catholic, 13.13%; Methodist, 8.05%; Baptist, 1.57%; others, 14.06%.

HISTORY. New Zealand, about 1,250 miles east of Australia, consists of two main islands and a number of smaller outlying islands so scattered that they range from the tropical to the antarctic. The islands, which have approximately the area of Italy, were discovered and named New Zealand in 1642 by Abel Tasman, a Dutch navigator. Captain James Cook explored them in 1769 and after him came many other sailors, sealers, whalers and traders. English missionaries landed in 1814 but made slow progress. On Jan. 22, 1840, to head off a possible French move to claim New Zealand, Britain formally annexed it. The New Zealand Company was formed the same year and immediately began to send out its first colonists.

New Zealand was granted self-government in 1852, a full parliamentary system and ministries in 1856 and dominion status on Sept. 26, 1907. Meanwhile from 1861 to 1871 there was fierce intermittent fighting with the native Maoris. Gold was first discovered in 1853 and a permanent mining field established in 1861.

New Zealand's Labour Party came to power in 1935 for the first time, with Michael J. Savage as Prime Minister. The party began a program of liberal economic and social measures and it was again successful in the 1938 elections.

When Savage died in 1940, he was succeeded by Peter Fraser, who formed a special war cabinet (New Zealand had joined Britain in the war against the Axis in September, 1939). In World War II, New Zealand troops fought in Egypt, Greece, Crete, North Africa, Sicily and Italy, and the islands served as a major base for U. S. troops in the Pacific war.

GOVERNMENT. New Zealand is a self-governing dominion of the British Commonwealth of Nations. The British Crown is represented by a Governor General named by the King after consultation with the New Zealand government. Parliament has two houses—the thirty-six-member Legislative Council named for seven years by the Governor General with the advice of the Cabinet; and the eighty-member House of Representatives, popularly elected for three years. The House elected on Nov. 27, 1946, had 42 Labour members and 38 National party members. Executive power is vested in the Cabinet chosen from the members of the majority party in the House and headed by the Prime Minister.

Military service was voluntary until July 22, 1940, when compulsory service was instituted. Service outside the Dominion, hitherto voluntary, also became obligatory during World War II. At full mobilization, New Zealand had 157,000 men in the armed forces and 124,000 in the Home Guard. Almost one-third of the whole male population of military age served overseas. Naval forces include 2 cruisers, 4 corvettes and a number of mine sweepers.

SOCIAL AND ECONOMIC CONDITIONS. State education is free and compulsory between the ages of 7 and 15. More than half the Maoris attend the regular public schools; the remainder attend missionary and native village schools. In 1944, there were 2,090 state elementary schools with 204,060 students, and 172 secondary schools with 36,940 students. University students in 1946 numbered 10,700. About 6 percent of the national budget is expended on education.

New Zealand's advanced social security system, financed principally by a 5 percent tax on wages, salaries and firm incomes, gives benefits for old age, sickness, unemployment, maternity and hospitalization, widows, orphans, poor families and chronic invalids. The Dominion's death rate is among the world's lowest.

Primarily a grazing country, New Zealand is one of the world's largest exporters of mutton, lamb, wool, butter and cheese. In 1945, livestock included 33,974,612 sheep, 4,590,926 cattle (including 1,678,943 dairy cows) and 593,828 hogs. Wool production for 1944-45 was 186,000 tons (greasy). Scientific dairy management is well advanced. In 1944 New Zealand had 19,750,000 acres under cultivation, 90 percent of it in sown grasses. Outside of grass, the chief crop is wheat—5,438,000 bushels in 1946. Others are oats, barley, potatoes, onions, tobacco, fruits and vegetables.

In 1943-44 there were 6,202 factories, with 117,864 workers and output valued at £NZ175,686,689. The chief industries are freezing of meat and making of butter, cheese and condensed milk. Others of ma-

for importance are electricity generation, saw milling and clothing manufacture.

Exports (1946) totalled £99,406,366 and imports £71,634,000. Principal exports were butter (£19,841,000), greasy wool (£17,898,000), frozen lamb (£13,748,000), other wool (£8,695,000) and cheese (£8,695,000). Leading imports included cotton and linen goods, electrical equipment, machinery, drugs and chemicals, and silk and synthetic fiber goods. Chief customers were the United Kingdom (£69,156,000), U. S. (£9,700,000) and Australia (£3,627,000). Principal suppliers were United Kingdom (£34,195,000), U. S. (£11,793,000) and Australia (£10,420,000).

The merchant marine in 1944 included 455 vessels of 84,159 net tons. Railway mileage in 1945 totaled 3,684, all but 180 miles government-owned. Highway mileage in 1945 was 58,096.

Governmental revenue for 1946-47 was estimated at £100,382,000 and expenditure at £99,465,000. Revenue from the social security fund was estimated at £38,038,000 and expenditure at £35,788,000. The public debt in March, 1946, totaled £624,511,590. A member of the sterling bloc, New Zealand had overseas funds amounting to £84,938,245 on March 31, 1947.

TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE. New Zealand's two main components are North Island and South Island, separated by Cook Strait, which varies from sixteen to 190 miles in width. North Island (44,281 sq. mi.) is 515 miles long and volcanic in its south central part. It contains many hot springs and beautiful geysers. In the southern part of North Island is Lake Taupo (238 sq. mi.), in the center of a pumice-covered plateau.

South Island (58,092 sq. mi.) has the Southern Alps along its west coast, with Mt. Cook (12,349 feet) the highest point in New Zealand.

Principal minerals and 1944 production figures are: coal, 3,086,567 tons; gold, 142,287 ounces; silver, 328,281 ounces. Other minerals of importance include tungsten, pumice, silica sand, asbestos, scheelite, iron ore and phosphate. About 20 percent of the total area is forested; 324,473,000 board feet of lumber were cut in 1942.

Flounder, snapper and tarakihi account for 75 percent of New Zealand's fishery industry. There also are extensive oyster beds. The once important whaling industry declined sharply with development of pelagic whaling.

Numerous rushing streams give New Zealand a great volume of hydroelectric power. South Island has available about 4,000,000 horsepower, and North Island 800,000. About 95 percent of the population has access to power.

The ocean tempers New Zealand's cli-

mate, which otherwise might have great variation. The range of mean temperatures is small (at Auckland, 66.3° in January, 51.2° in July; at Wellington, 60.9° in January, 47.2° in July). Rainfall is moderate except on the western slope of the Southern Alps; it averages 45.3 inches annually at Auckland and 47.5 inches at Wellington and is heaviest in winter.

DEPENDENCIES. The Auckland Islands (234 sq. mi.) and Campbell Island (44 sq. mi.) are the principal outlying islands, which have a total area of 307 square miles. They are included within the geographical boundaries of New Zealand as proclaimed in 1847. The Aucklands and Campbell are uninhabited. Six hundred miles north of the Aucklands are the volcanic Kermadec Islands (13 sq. mi.), annexed in 1887.

In Polynesia a number of inhabited islands were brought under New Zealand's control in 1901. Rarotonga and Mangaia in the Cook group total 84 square miles. Niue (or Savage Island) (115 sq. mi.) is the largest island outside the Cook group. New Zealand also administers the Ross Dependency, an antarctic region claimed by Great Britain in 1923, and the Union (or Tokelau) Islands, transferred in 1925 from the Gilbert and Ellice Islands colony.

WESTERN SAMOA—Status: Under United Nations Trusteeship.

Area: 1,133 square miles.

Population (1945): 68,197.

Administrator: F. W. Voelcker.

Capital: Apia (population 1,400).

Foreign trade (1943): exports, \$282,991; imports, \$605,911.

Principal products: copra, cacao, bananas, tropical fruits, rubber.

The former German Samoan Islands were occupied by Imperial troops in the opening weeks of World War I and were mandated to New Zealand by the League of Nations in 1920 as the Territory of Western Samoa. The administrator is assisted by a Legislative Council and a consultative Native Council. There are 9 islands, of which the largest and most populous are Savaii (703 sq. mi.) and Upolu (430 sq. mi.). They are largely mountainous but fertile. The inhabitants are Polynesian Christians.

Outlying Territories

SOLOMON ISLANDS—Status: Protectorate.

This British protectorate, lying east of New Guinea, includes the islands of Guadalcanal, Malaita, San Cristobal, New Georgia, Santa Isabel, Choiseul and numerous smaller islands. Bougainville, one of the group, is under Australian mandate. The islands, which came under British protection late in the 19th century, were the scene of several important U. S. naval and military victories during World War II.

There are no native states, and administration is carried on by a Resident Commissioner assisted by a nominated Advisory Council. The most important products are copra, coconuts and rubber.

TONGA (FRIENDLY ISLANDS)—Status: Protected state.

This native Polynesian kingdom in the Pacific came under British protection through the Anglo-German agreement of November 14, 1899. The native queen is advised by a British Agent; the 22-member native Legislative Council is partly elected and partly nominated. The only important products are copra and bananas.

Bulgaria (Republic)

(Blgariya)

Area: 42,741 square miles (including Southern Dobruja).

Population (census 1946): 7,020,863 (1934: Bulgarian, 86.7%; Turkish, 10.1%; Gypsy, 1.3%; others, 1.9%).

Density per square mile: 164.2.

Chief of State: Vasil Kolarov.

Premier: Georgi Dimitrov.

Principal cities (est. 1942): Sofia, 410,000 (capital); (census 1934), Philippopolis (Plovdiv), 99,883 (commercial center); Varna, 69,944 (Black Sea port); Ruschuk, 49,447 (chief Danube port); Burgas, 36,230 (Black Sea port).

Monetary unit: Lev.

Languages: Bulgarian, Turkish.

Religions: Greek Orthodox, 84.4%; Mohammedan, 13.5%; Jewish, .8%; Roman Catholic, .8%; others, .5%.

HISTORY. Bulgaria, with a strife-ridden political past, is an agrarian country about the size of Virginia. It sided timidly with Germany in World Wars I and II, hoping to win territory. Instead it lost in both wars, and 1947 found it firmly within the Soviet sphere of influence.

The first Bulgarians, a tribe of wild horsemen akin to the Huns, crossed the Danube from the north in A.D. 679, and took the province of Moesia from the Roman Empire. They adopted a Slav dialect and Slavic customs and twice conquered most of the Balkan peninsula between 893 and 1280. After the Serbs subjected their kingdom in 1330, the Bulgars gradually fell prey to the Turks, and from 1396 to 1878, Bulgaria was a Turkish province. In 1878, after the Turks had ruthlessly suppressed a Bulgar revolt, Russia forced Turkey to give the country its independence; but the European powers, fearing that Bulgaria might become a Russian dependency, intervened. By the Treaty of Berlin (July, 1878), Bulgaria became autonomous under Turkish sovereignty, with the province of Eastern Rumelia under a Christian governor.

In 1887 Prince Ferdinand of Saxe-Coburg-Gotha was elected ruler; on Oct. 5, 1908, he declared Bulgaria (and Rumelia) an independent kingdom and was proclaimed Tsar.

In the First Balkan War (1912-13), Bulgaria joined its neighbor states and defeated Turkey; then it bickered with Serbia and Greece over division of Macedonia and was defeated by them in the Second Balkan War, which lasted one month—June-July, 1913.

Still coveting Macedonia, Bulgaria joined Germany in World War I and lost. On Oct. 3, 1918, Tsar Ferdinand abdicated in favor of his son, who became Tsar Boris III. The Treaty of Neuilly the next year disarmed Bulgaria, reduced it to its 1878 size, and levied a heavy indemnity. Internal disorder, underground intrigue and Agrarian-Communist agitation marked the next fifteen years.

Boris assumed dictatorial powers in 1934-35. When Hitler awarded his nation Southern Dobruja, taken from Rumania in 1940, the weak but land-hungry Boris joined the Nazis in the war the next year and occupied parts of Yugoslavia and Greece. Later, with the fortunes of war swinging inexorably against them, the Germans tried to force Boris to send his troops against the Russians. Boris resisted and died under mysterious circumstances on Aug. 28, 1943.

Simeon II, the infant son of Boris, became the nominal ruler under a regent, and Bulgaria began to make desperate gestures of friendship to the Allies. Three days after Russia declared war on Bulgaria on Sept. 5, 1944, Bulgaria declared war on Germany. Russian troops streamed in the next day, and under an informal armistice a coalition "Fatherland Front" cabinet was set up under Kimon Georgiev.

The Fatherland Front regime represented the Communist, Zveno, Agrarian and Social Democratic parties, but real power was in the hands of the Communists, who had active Soviet support and were ably led by Georgi Dimitrov, a veteran party leader and former secretary-general of the Comintern.

This Government initiated extensive social and economic reforms, instituted a ruthless purge of war criminals and suppressed all political groups which failed to subscribe to its policies. Despite repeated promises at Big Three conferences that democratic liberties would be safeguarded and free elections held, the elections of Nov. 18, 1945, and Oct. 27, 1946, were conducted in typical Communist manner, with the Fatherland Front securing overwhelming majorities, according to official figures.

After the plebiscite of Sept. 8, 1946, which resulted in overthrow of the monarchy, and the Oct. 27 elections, the Com-

munist quickly moved to take over the Government officially and to reduce the democratic opposition to complete impotence. Dimitrov replaced Zveno leader, Georgiev as Premier on Nov. 22, 1946.

Communist coercion and intimidation of the opposition was climaxed on June 6, 1947 by the arrest and subsequent trial for treason of Nikola Petkov, secretary general of the Agrarian Party and chief Opposition leader.

GOVERNMENT. After the plebiscite of Sept. 8, 1946, the prerogatives of the crown were assumed provisionally by the praesidium of the national assembly, whose chairman occupies temporarily the position of chief of state. The unicameral National Assembly elected Oct. 27, 1946, is to adopt a constitution for the Republic. The party standing in the Assembly is as follows: Fatherland Front 366 (including 279 Communists); Opposition 99.

PEACE TREATY OF 1947. Under the treaty signed at Paris, Feb. 10, 1947, Bulgaria's boundaries are those which existed Jan. 1, 1941, thus including Southern Dobruja. Bulgaria is to pay reparations in the amount of \$45,000,000 to Greece and \$25,000,000 to Yugoslavia and is to make compensation for damage to Allied property in Bulgaria at the rate of 75 percent of the cost of replacement. The treaty became effective upon ratification by the Soviet Union, Britain and the United States in Sept., 1947.

DEFENSE. The 1947 treaty fixed the strength of the armed forces as follows: army 55,000; anti-aircraft artillery 1,800; navy 3,500; and air force 5,200 men and 90 aircraft, none of them bombers. The army was purged of all anti-Communist officers late in 1946 and is being reorganized along Soviet lines by Red Army instructors. The treaty provided that Soviet occupation troops, estimated at 85,000 in mid-1947, were to be withdrawn not later than 90 days after the effective date of the treaty.

SOCIAL AND ECONOMIC CONDITIONS. Though elementary education is compulsory and free between 7 and 14, the census of 1934 showed 20.4 percent of the males and 42.8 percent of the females illiterate. Schools in 1939 included 252 kindergartens, 4,743 primary schools and 2,044 high schools with a total enrollment of 969,599. The only university (Sofia) had an enrollment of 6,030.

Most of the population is Greek Orthodox. Clergy of all faiths are paid by the state. The national language, Bulgarian, is closely related to Russian; both employ the Cyrillic alphabet.

Bulgaria is predominantly agrarian, with 80 percent of the population engaged in agriculture. Because of the mountainous character of the country, however, only about 43 percent of the land is tilled or

used for pasture. Most landholdings are small, and primitive methods of cultivation predominate. More than half the cultivated area is devoted to cereals, including wheat (production in 1946, about 1,600,000 tons), corn, barley, oats and rye. Other crops are tobacco (1946: 37,965 tons), alfalfa, cotton, flax, potatoes and sugar. There are extensive vineyards in the southern valleys. Production of silkwork cocoons is highly developed. In 1945 Bulgaria had 470,000 horses, 1,370,000 cattle, 7,050,000 sheep, 715,000 goats, 840,000 hogs and 6,600,000 poultry.

Industries of Bulgaria are of minor importance and with three exceptions—preparation of tobacco leaf, distillation of attar of roses, and flour milling—are confined to domestic markets. Immediately prior to World War II there were 3,400 industrial organizations with 75,000 workers.

Foreign trade necessarily consists of the exchange of agricultural products for cheap manufactures. Exports in 1939 amounted to \$73,450,000, led by leaf tobacco, 41 percent; grapes, 7.6 percent; eggs, 8.4 percent; wheat, 7.3 percent; corn; prunes; swine and attar of roses. Imports in 1939 were \$62,398,000, led by machinery and parts, wool and wool thread, automobiles and parts, cotton (raw), cotton thread and textiles, iron and manufactures, raw skins, sheet iron and drugs. Germany's prewar place in Bulgarian foreign trade has been taken by the Soviet Union, which has suppressed publication of most postwar trade statistics.

Although the Danube is navigable along the northern border, only a comparatively small percentage of prewar Danube ship tonnage was Bulgarian. Railroad mileage, all nationalized, totaled 2,211 in 1939; highway mileage was 19,638.

Government revenues and expenditures for the year 1946 were estimated to balance at 42,910,000,000 leva. The leading items of expense were defense (more than 20 percent), servicing of the public debt, and public works. The already precarious financial position of the government has been aggravated by Red Army occupation costs and reparations to Russia.

TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE. Two mountain ranges and two great valleys mark Bulgaria's topography. The Balkan belt crosses the center of the country, almost due east-west, rising to a height of 7,800 feet. The Rhodope range breaks off from the Balkans in the west, curves and then straightens out to run nearly parallel along the southern border. Between the two ranges is the valley of the Maritsa, Bulgaria's principal river. Between the Balkan range and the Danube, which forms most of the northern boundary with Rumania, is the Danubian tableland, traversed by several short rivers.

Southern Dobruja, a fertile region of 2,900 square miles below the Danube delta, is an area of low hills, fens and sandy steppes.

Soft coal is Bulgaria's only important mineral; most of the mines are state-owned. The prewar production was approximately 2,000,000 tons annually. Other mineral products include aluminum and rock salt.

About 30 percent of the country is forested, but a large part is unproductive scrub, and most of the valuable woods are virtually inaccessible. Wood imports usually exceed exports.

Bulgaria's climate is characterized by cold winters and warm summers approaching the subtropical in the south. Rain and snowfall average twenty to forty inches a year. Temperatures at Sofia average 28° in January and 69° in July.

Chile (Republic)

(República de Chile)

Area: 290,085 square miles.

Population (est. 1945): 5,389,554 (est. 1938: white, 30%; mestizo, 65%; Indian, 5%).

Density per square mile: 18.6.

President: Gabriel González Videla.

Principal cities (est. 1944): Santiago, 952,075 (capital); Valparaíso, 209,945 (chief port); Concepción, 85,813 (farming center); Viña del Mar, 65,916 (resort center); Talca, 50,964 (farming center).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Chile has had a relatively tranquil history amid South America's long record of revolution and strife. Its first contact with Europeans came in 1536, when Diego de Almagro, an associate of Pizarro, led an unsuccessful invasion from Peru. Five years later another Spaniard, Pedro de Valdivia, founded Santiago. On Sept. 18, 1810, Chile rebelled against Spanish rule, but independence was not won completely until 1818, when Bernardo O'Higgins and José de San Martín finally crushed the Spanish armies.

Chile, which has never lost a war, fought with Bolivia and Peru in 1879-83 and won the province of Antofagasta, Bolivia's only outlet to the Pacific, as well as extensive areas from Peru. In World War I, Chile was neutral. The overthrow in 1931 of Colonel Carlos Ibáñez, who had seized power in 1927, was followed by a brief chaotic period in which seven presidents tumbled in and out of office, but Dr. Arturo Alessandri (1932-38) did much to restore Chile's political and economic order.

Pedro Aguirre Cerda, victor in the 1938 elections, initiated an extensive socialist program before his death on Nov. 25, 1941. The term of Juan Antonio Ríos, elected as Radical candidate of the Popular Front in

1942, was marked by political dissension and labor difficulties. Under both external and internal pressure, the latter notably from its strong Communist party, Chile finally broke relations with the Axis on Jan. 20, 1943, but did not declare war on Japan until Feb. 14, 1945.

Meanwhile, well before he died on June 27, 1946, Ríos was forced by serious illness to turn over his powers to Alfredo Duhalde, Senate president. As a result of the special election of Sept. 4, 1946, Gabriel González Videla, candidate of a leftist-center coalition, became president, Nov. 3, 1946.

GOVERNMENT AND DEFENSE. The nation elects a president every six years, a Senate of forty-five members every eight years (one half renewable every four years) and a Chamber of Deputies of 147 members every four years. The president is assisted by a cabinet responsible to him but subject to impeachment by Congress, which also may override a presidential veto by two-thirds vote. All literate male citizens over twenty-one may vote in elections.

Military service is compulsory, beginning at twenty with an initial training period of nine months, after which a civilian is on reserve until the age of forty-five. In 1947 the army was unofficially estimated at 23,500. In 1945, about 30 percent of the Chilean budget went to the military. The navy, normally 8,000 men strong, had in 1947 one old battleship of 28,000 tons, two old cruisers, eight destroyers, nine submarines and two coast defense craft. The air force, with 200 planes and 3,000 men in 1940, expanded during World War II.

SOCIAL AND ECONOMIC CONDITIONS. Education, free and compulsory between 7 and 15, is directed by the central government. In 1943, illiteracy was estimated at 24 percent, third lowest in Latin America. School enrollment in 1946 was only slightly under 600,000. There are five universities, including the State University of Chile. About 20 percent of the budget is devoted to education.

The base of the white population is Spanish, although there are some German, English, Irish and Scotch. Roman Catholicism is the dominant religion, but church and state were separated in 1925.

Chilean agriculture is mostly confined to its temperate central valley, similar to that of California. The available productive land is extremely limited, and most of it must be irrigated. Wheat is the leading crop, followed by potatoes, oats, barley, corn, string beans and fruits. Grapes, next to wheat in acreage, produced 93,000,000 gallons of wine in 1946. Feudal-type estates, averaging 2,500 acres, predominate. Cattle in 1944 totaled 2,805,713. The livestock industry does not supply local needs, but wool is used in Chilean textile mills, and wool and hides are exported.

The volume of Chile's foreign trade, which increased sharply during World War II, continued its upward trend in 1945. Imports totaled \$155,900,000 as against exports of \$204,500,000. Copper, nitrate and iodine made up 70 percent of exports, followed by wool, rice, beans, hemp and malt barley. By value, the United States took 55.3 percent of exports, Argentina 9.2 percent, Brazil 3.5 percent and Cuba 2.5 percent. The United States supplied 42.2 percent of imports by value, followed by Argentina (20.5 percent) and Peru (15.8 percent).

Although Chile dreams of great industrial development and has all the necessary raw materials except coal and tin, progress continues slowly. Except for mineral processing, most manufacturing is of low-priced consumer's goods, particularly textiles. A large steel industry was established in 1946, however, with production expected to begin in 1949. In 1940 there were 4,034 factories with 123,091 workers.

Highway mileage totals approximately 30,000, about a third of which is improved. Rail mileage is 5,434, partly electrified. Civil aviation is highly developed in the interior, and several international lines serve the country. Regular air service to New York City was inaugurated in 1946. The 1940 merchant marine totaled 106 vessels of 160,232 gross tons.

Deficit financing continues to be a serious problem. The revised 1946 budget put revenue estimates at 5,882,900,000 pesos and expenditures at 5,878,300,000 pesos, but the actual deficit in 1945 was 210,000,000 pesos and the accumulated deficit on Jan. 1, 1946, was 586,800,000 pesos. At the beginning of 1946, the national debt was 6,665,000,000 pesos. U. S. investments in 1942, mostly in mining and manufacturing, were \$413,983,000. British investments were estimated at \$49,207,126 on Dec. 31, 1946.

The basis of the country's economy is its mineral resources in the northern desert provinces of Atacama, Antofagasta and Tarapacá, where the only natural nitrate in the world is found. Some 60 percent of the world's iodine is obtained as a by-product of nitrate processing. Chile's world monopoly in nitrate, however, declined in importance with development of the synthetic product.

The world's largest copper reserve, estimated at 134 billion pounds, is in Chile, and also more than 900 million tons of high grade iron ore. The reserve of Chilean coal, noted for quantity rather than quality, exceeds two billion tons.

Mineral production in 1945 was as follows: coal, 2,255,000 short tons; copper, 518,200 short tons; silver (1944), 1,090,000 oz.; mercury, 45 short tons; iron ore, 1,040,000 short tons; manganese ore (1944), 79,900 short tons; and gold, 180,000 oz. Nitrate production (1945-46) was 1,765,000 short

tons. Cobalt, zinc, tungsten and molybdenum also are produced. Oil was produced in Tierra del Fuego first in Dec., 1945.

Forests, estimated to cover 35 million acres in the southern provinces, yield a variety of commercial wood, including conifer, laurel and magnolia. Fishery products include cod, eel, oysters, sawfish, sardines and tuna. Whale-oil production in 1945 was 3,800 short tons.

TOPOGRAPHY AND CLIMATE. A narrow, mountainous land, Chile is 2,661 miles in length, and varies from 46 to 250 miles in width; one-third of its area is covered by the towering ranges of the Andes. In the north is the mineral-rich Atacama Desert, between the coast mountains and the Andes. In the center is a 700-mile-long valley, thickly populated, between the Andes and the coastal plateau. In the south, the Andes border on the ocean.

At the southern tip of Chile's mainland is Punta Arenas, the southernmost city in the world, and beyond that lies the Strait of Magellan and Tierra del Fuego, an island divided between Chile and Argentina. Chile's short rivers are useful only for irrigation and as sources of electric power. The country has many ports, but most of the tonnage must be handled by lighters.

In Chile's extreme north the days are hot, the nights warm on the coast and cool in the interior. Central Chile's climate is comparable to that of southern California, and southward in the lake regions the climate is similar to that of the U. S. Pacific Northwest. In the extreme south, fogs and storms keep the mean temperature low. Santiago has extreme recorded temperature ranges of 25° and 96°; only rarely does snow fall.

China (Republic)

(Chung-Hua Min-Kuo)

Area: 3,858,900 square miles.*

Population (est. 1945): 461,000,000.*

Density per square mile: 119.2.

President: Chiang Kai-shek.

Premier: Gen. Chang Chun.

Principal cities (est. 1946): Shanghai, 4,274,486† (chief port, industrial and financial center); Peiping (Peking), 1,672,438 (political, educational center); Tientsin, 1,707,670 (commercial center); Canton (1945), 1,115,000 (southern seaport); Chungking, 1,002,787 (wartime capital); Nanking, 856,364 (capital).

Monetary unit: Chinese dollar.

Language: Chinese.

Religions: Confucianism, Buddhism, Taoism, Mohammedanism, Christianity.

*Including Province of Formosa (Taiwan) and Manchuria; excluding Outer Mongolia. †Est. 1947.

HISTORY. China, second in size and first in population among the countries of the

world, was the first victim of the aggressions that led to World War II. Japan seized Manchuria in 1931-32 and invaded China proper in 1937. In the years that followed, China suffered untold destruction and lost millions of lives through military action or starvation.

China was not only fighting a powerful external enemy; it was also torn by internal dissensions between the Chiang Kai-shek government and the Communists of the north. When 1945 finally brought victory over Japan, China still suffered cruelly. The war's wake brought on new famines and a renewal of the old internal struggle. In 1947 the central government and the Communists continued a sporadic but bloody civil war, after U. S. efforts to bring the sides together had failed.

China is ancient and wise, but backward. Its recorded history is among the world's oldest. By 2000 B.C., Chinese were living in the Hwang Ho basin, and they had achieved an advanced stage of civilization by 1200 B.C. The great philosophers, Lao-tse, Confucius, Mo Ti and Mencius lived during the Chou dynasty (about 1122 to 249 B.C.). The warring feudal states were first united under Emperor Ch'in Shih Huang Ti, during whose reign (246-210 B.C.) work was begun on the Great Wall. Under the Han dynasty (206 B.C. to A.D. 220) China prospered and opened trade with the West.

The T'ang dynasty (618-907) has often been called the golden age of Chinese history. Painting, sculpture and poetry flourished under royal patronage, and printing made its earliest known appearance.

The Mings, last of the native rulers (1368-1644), overthrew the Mongol or Yuan dynasty (1280-1368) established by Kublai Khan, whose dominions extended into eastern Europe. The weakening Mings in turn were overthrown in 1644 by invaders from the north, the Manchus.

The Chinese closely restricted foreign activities, and by the end of the 18th century only Canton (and the Portuguese port of Macao) were open to European merchants. Following the Anglo-Chinese war of 1839-42, however, several treaty ports were opened and Hong Kong was ceded to Britain. Treaties signed after further hostilities (1856-60) weakened Chinese sovereignty and removed foreigners from Chinese jurisdiction. The disastrous Chinese-Japanese War of 1894-95 was followed by a scramble for Chinese leases and concessions by European powers which resulted in the nationalist Boxer Rebellion (1900), suppressed by an international force.

The death of the Empress Dowager Tzu Hsi in 1908 and the accession of the infant emperor Hsüan T'ung (Pu-Yi) were followed by a nation-wide rebellion led by Dr. Sun Yat-sen, who became first Presi-

dent of the Provisional Chinese Republic in 1911. The Manchus abdicated on Feb. 12, 1912. Dr. Sun resigned in favor of Yuan Shih-k'ai, who suppressed the republicans but was forced by a serious rising in 1915-16 to abandon his intention of declaring himself Emperor. Yuan's death in June, 1916, was followed by years of civil war between rival militarists and Dr. Sun's republicans. The death in 1925 of Dr. Sun, who had controlled only the Canton area in opposition to the recognized regime, was followed by a revival of the Kuomintang party, which practically deified him. Nationalist forces, led by Gen. Chiang Kai-shek and advised originally by Communist experts, soon occupied most of China, setting up a Kuomintang regime in 1928. Internal strife continued, however; Chiang broke with the Communists.

An alleged explosion on the South Manchurian Railway on Sept. 18, 1931, brought invasion of Manchuria by Japanese forces, who installed the last Manchu emperor, Henry Pu-Yi, as nominal ruler of the puppet state of "Manchukuo." Japanese efforts to take China's northern provinces in July, 1937, were resisted by Chiang Kai-shek, who meanwhile had succeeded in uniting most of China behind him. Within two years, however, Japan seized most of the ports and railways. The Kuomintang government retreated first to Hankow and then to Chungking, while in "Occupied China" the Japanese set up a puppet government at Nanking headed by Wang Ching-wei. In 1943 Chiang became political as well as military leader of "Free China."

When the Japanese surrendered in 1945, a treaty was signed with the Soviet Union providing for Soviet withdrawal from Manchuria, joint Chinese-Soviet control of Manchurian railways for 30 years, a joint Chinese-Soviet naval base at Port Arthur and a free port at Dairen. The surrender touched off a race between Nationalist and Communist forces for control of important centers in North China and Manchuria. Agreement was reached for the establishment of a Political Consultative Council representing all groups on Oct. 10, 1945, but fighting broke out again early in 1946 with the Communists controlling northern and central Manchuria and northern China.

The struggle continued during most of 1946 and into 1947. Meanwhile, the efforts of Gen. George C. Marshall, special U. S. envoy, to bring about agreement between the warring factions proved fruitless, and he left China Jan. 7, 1947. The last of the 1,900 U. S. Marines in China departed in June.

After trying repeatedly to secure Communist participation, President Chiang on Nov. 15, 1946, convened a National Assembly representative of all other political groups for the purpose of drafting a Constitution. This instrument, democratic in

nature, was approved Dec. 25, 1946, to take effect a year later.

Following inter-party negotiations, a new Cabinet was announced on Apr. 23, 1947, which included representatives of all parties participating in the Assembly. Earlier, on April 17, Chiang had announced the formation of a multi-party State Council, to be the policy-making body until Dec. 25, 1947; he hailed it as constituting "another step in the transition from Kuomintang tutelage to constitutional government."

GOVERNMENT. Under China's new Constitution, the highest state organ is the National Assembly, which meets once each three years and is the "sovereign organ of the people." Its members are elected for 6-year terms on the basis of territorial and professional representation. The Assembly elects the President and Vice President of the Republic for 6-year terms. The organs of government are five in number—the Executive Yüan (cabinet), whose members, headed by the Premier, are appointed by the President with the concurrence of the Legislative Yüan; the Legislative Yüan, which exercises legislative functions when the Assembly is not in session and has ultimate control over the cabinet; the Control Yüan, broadly corresponding to an "upper house," which has general supervisory and censorial functions; the Judicial Yüan, the highest court of justice; and the Examination Yüan, which controls civil service.

DEFENSE. Military service is compulsory; the initial training period is one or two years. The President is supreme commander of all forces. In mid-1947 the national army had about 250 divisions and from four to five million men, of whom only about 1,500,000 were combat effectives. The small air force had about 550 planes. With a U. S. donation of small warships, the navy on Dec. 31, 1946, had about 60 vessels with an aggregate tonnage of 38,000 and 25,000 personnel. Further expansion was planned, including the acquisition of several cruisers. In 1947 about 80 percent of the budget was tabbed for military purposes.

The separate Communist armies in Manchuria and north China were estimated in mid-1947 to number from 1,000,000 to 1,500,000 in organized units. They were equipped with considerable captured Japanese matériel.

EDUCATION. Recent years have seen marked progress toward mass education. Excluding schools in former occupied areas, there were in 1946 about 145 institutions of higher learning with an enrollment of 78,000; in 1945 there were 3,455 secondary schools with an enrollment of 1,101,087, and 265,417 primary schools with about 18,000,000 pupils. Education is nominally compulsory between the ages of 6 and 12.

The mass education and literacy movement has been accompanied by the replacement of the old classical or "dead" Chinese language with the popular vernacular (Pai-hua) of the Mandarin dialect, employing perhaps 1,000 of the most essential of the many thousands of Chinese ideographs.

POPULATION AND RELIGION. Estimates of China's population vary and are only calculated guesses. The population is quite unevenly distributed, with most of it in the following five areas: the central portion of the northern plain (Shantung); the Yangtze Kiang delta; a coastal belt extending southward from the Yangtze delta to the Canton delta; the Hupeh basin centered around Hankow; and the isolated Red basin of Szechwan, far to the west. Most Chinese who are not Christians or Moslems practice one of the three native religions—Confucianism, Buddhism or Taoism. Almost 10 percent of the population is estimated to be Moslem; there are also many Roman Catholics and Protestants.

AGRICULTURE. In China, nearly 80 percent of the population depend on the land for livelihood. Subsistence crops are necessarily emphasized, but China is still not self-sufficient in food. Cultivation is intensive, holdings are small, and irrigation is widely practiced. The three most important food crops—rice (1941-42: 2,326,840,000 bushels), wheat (1941: 720,000,000 bushels) and millet—occupy about 70 percent of the cultivated area. The range of crops is wide. In the north, wheat, barley, corn, sorghum, millet and other cereals, beans and peas predominate, whereas in the south, rice, sugar and indigo are most important. The Yangtze basin, one of the most favored agricultural regions in the world, is China's premier granary. Tea, the chief beverage, is grown mainly in the central uplands, coastal ranges and Szechwan.

Silkworm culture is practiced widely, especially in the lower Yangtze valley. Cotton, the major purely industrial crop, runs from 2,500,000 to 4,000,000 bales a year. Soybeans are of ever-increasing importance. Other crops include fibers, tobacco, vegetable oils, cane sugar and many medicinal plants and spices.

The urgent need for subsistence crops has confined grazing grounds for sheep and cattle to the dry northwest and to mountain pastures. However, such animals as goats, poultry and especially pigs are raised everywhere.

INDUSTRY. Industrially, China is still in its infancy. Development has been mainly in the erection of textile mills, silk and flour mills, match factories, tanneries and some steel and cement mills. The production of consumer's goods far exceeds that of producer's goods, which must still be imported. Much of the industry which had

been developed in the lower Yangtze valley and the Shanghai area was moved westward in 1938 and 1939 to escape Japanese capture.

Industrial rehabilitation proceeded slowly in 1947 because of the high cost of labor and materials, high interest rates, power shortages and the unsettled political situation.

TRADE. Definitive postwar foreign trade statistics were not available in 1947. The export program was seriously handicapped by disrupted transportation facilities, continued civil war and heavy currency inflation. The unfavorable balance of trade in 1946 was unprecedented.

COMMUNICATIONS. Exploitation of many of China's natural resources has been handicapped by the lack of internal communications. There is an extensive system of inland waterways and canals, however, and in central and south China most of the freight is carried by water.

The modern highway system now totals about 80,000 miles. The railway system, totaling about 13,000 miles, is concentrated in the lower Yangtze basin and in north China and Manchuria. More than one-third of the Manchurian mileage was wrecked or wholly inoperative because of Communist activity in 1947. The principal port, Shanghai, at the mouth of the Yangtze, normally accounts for about 50 percent of the total maritime customs revenue, and is the Far East's major port.

FINANCE. The national budget in 1946 was announced as 2,524,900,000 Chinese dollars and the deficit as 677,100,000,000 Chinese dollars. The actual expenditures and deficit were still greater, and inflation was widespread. From 1938 to Aug., 1945, the Soviet Union, Britain and the United States extended loans to China totaling £58,047,000 and \$870,000,000. In addition, lend-lease assistance from March 11, 1941, to Dec. 31, 1945, amounted to \$1,335,632,000. From V-J Day until Sept. 30, 1946, assistance totaled \$1,564,698,000.

TOPOGRAPHY. China has about 1¼ times the area of the continental United States. Its coast line is roughly a semi-circle, about 2,150 miles long. The greater part of the country is mountainous, and only in the lower reaches of the Hwang Ho and Yangtze Kiang are there extensive low plains. The principal mountain ranges are the Tien Shan, to the northwest; the Kunlun chain, which attains a maximum height of 23,885 feet, running south of the Takla Makan and Gobi Deserts; and the Trans-Himalaya, connecting the Kunlun with the borders of China and Tibet. Manchuria is largely an undulating plain connected with the north China plain by a narrow lowland corridor. Inner Mongolia contains the relatively fertile southern and eastern portions of the Gobi. The large

island of Hainan (13,500 sq. mi.) lies off the southern coast.

HYDROGRAPHY. China proper consists of three great river systems. The northern part of the country is drained by the Hwang Ho (Yellow), 2,700 miles long and mostly unnavigable. The central part is drained by the Yangtze Kiang, the fifth longest river in the world (3,100 mi.). The Si Kiang in the south is about 1,650 miles long and navigable for a considerable distance. In addition, the Amur forms part of the northeastern boundary.

MINERALS. Iron ore, far less plentiful than coal, is mined principally in the lower Yangtze valley and in north China. Tin, mined in Yunnan and southwest Szechwan, is the major export mineral. Of some rarer minerals, notably antimony and tungsten, China is normally the world's leading producer. Lead, zinc, silver, mercury and gold are also mined. Mineral production in 1944 in short tons was: coal, 6,020,000; antimony, 6,600; tungsten, 9,906; tin, 1,500 (1945).

FORESTS AND FISHERIES. China urgently needs reforestation. Most remaining forests are on inaccessible mountain slopes. Bamboo is cultivated in groves throughout the country south of the Tsinling mountains. Both sea and river fisheries are rich and varied, and fresh or salted fish is a staple food in many districts. The coastal fisheries of Shantung, Chekiang and Kwantung are especially valuable.

CLIMATE. There are great diversities of climate. North China has the coldest winters in the world for its latitude (23.5° average in January at Peiping). The Yangtze valley is warmer, with winter temperatures more like those of Britain, while the south has warm subtropical winters. Summer temperatures are uniformly hot throughout China (about 79° in July at Peiping and 82° at Hong Kong). South China receives regular rainfall averaging from 40 to 60 inches annually, but in the north rainfall is irregular and not as heavy; droughts and floods are common.

Manchuria includes the three north-eastern provinces of China—Fengtien, Kirin and Heilungkiang, which before the Japanese invasion of 1931 were governed apart from China proper. A separate state (Manchukuo) set up under Japanese sponsorship was never recognized by China, the United States or Britain. The regime was a transparent screen for Japanese control exercised by the Kwantung army. The Japanese hold on Manchuria was broken by the Red Army invasion of August, 1945.

The decision reached at the Cairo conference (1943) that Manchuria should revert to Chinese possession was confirmed by the Chinese-Soviet treaty signed Aug. 14, 1945. Soon after the Japanese surrender, Chinese Communist troops moved into the country and continued to control most of northern and central Manchuria after the Soviet evacuation. By early 1947, Chinese Government troops held only the southern coast line, except Port Arthur and Dairen, and a salient between Changchun and Harbin.

As a result of extensive Japanese development, Manchuria became probably the richest industrial area in China, containing about two-thirds of her heavy industry and half her railway mileage. Industrial activity in 1947, however, was still retarded by the wide-scale Soviet removal of key industrial equipment.

Manchuria is also a rich agricultural region with a cultivable area estimated at 70,000,000 acres. Lumber from the forests of the East Manchurian Highlands ordinarily supplies the needs not only of the Manchurian plain but also of North China.

FORMOSA (TAIWAN).—Status: Province (Part of Republic of China).

Area: 13,836 square miles.

Population (1946): 6,250,703.

Capital: Taihoku (pop. 1940: 326,407).

Chief exports (almost entirely to China after World War II): sugar, rice, bananas.

Agricultural products: sugar cane, rice (1946: 54,000,000 bushels), sweet potatoes, bananas, pineapples, tea.

Industries: sugar refining, canning, cement, chemicals, wood, paper.

Minerals: gold, coal (1942: 1,084,104 metric tons), petroleum, silver, sulfur.

Formosa is a large island in the western Pacific, separated from China to the west by the Taiwan straits (narrowest point, 90 mi.). The Pescadores (Bokoto) (about 77 sq. mi.) and other outlying islands became administratively a part of Formosa under Japanese rule. Formosa, ceded to Japan in 1895 after the Chinese-Japanese War, remained Japanese until restored to China in 1945. Dr. Wai Tao-ming, former Ambassador to U. S., became its first Governor when the island became a province in May, 1947.

Most of the inhabitants are of Chinese

Chinese Outer Territories

MANCHURIA.—Status: Integral part of Republic of China, partially occupied by Chinese Communist forces in 1947.

Area: 503,143 square miles.

Population (est. 1940): 43,233,954.

Chief exports: soya beans, bean cake, coal, millet, sorghum, corn.

Agricultural crops (1940, in short tons): soya beans, 4,200,000; sorghum, 4,850,000; millet, 4,300,000; maize, 3,400,000; wheat, 890,000; rice (1946) 15,000,000 bushels.

Industries: iron and steel, machinery, textiles, food processing, chemicals.

Minerals: coal, iron ore, gold, lead ore, manganese ore.

stock. There are also about 150,000 aboriginal tribesmen in the mountainous interior and (in 1940) 308,845 Japanese. Sugar cane, grown under the plantation system, is the most prosperous of the island's developments, but production in 1946 was less than 10 per cent of normal. Formosa is one of the world's chief sources of camphor, and government monopolies of camphor, salt, opium and tobacco have been established. Forest resources are enormous. Railway mileage (1939) totaled 2,503, and roads 10,000.

TIBET—Status: Under nominal Chinese suzerainty but politically independent.

Area: 469,294 square miles.

Population (est. 1946): 3,772,061.

Capital: Lhasa (est. 50,000).

Ruler: The 14th Dalai Lama (Lingerh Lamutan-chu).

Exports: wool, live animals, salt hides, borax, tea, musk.

Agricultural products: barley, fruits, pulse, vegetables.

Minerals: borax, salt, coal, gold.

Tibet, north and northwest of the Himalayas, is the highest country in the world, averaging 16,000 feet in elevation and having many peaks ranging up to more than 25,000 feet. Chinese suzerainty over Tibet was established in the 18th century. The area was invaded by a British expeditionary force in 1904, but the Anglo-Russian Convention of 1907 recognized China's influence and stipulated that neither Russia nor Britain should interfere in Tibet's affairs.

Chinese representatives were expelled in 1911-12, but in recent years Chinese-Tibetan relations have improved. The government is a theocracy, ruled by the Dalai Lama, who acts through a regent or minister appointed from among chief lamas.

The religion and the predominant factor in Tibet's social system is Lamaism, a form of Buddhism modified by animism and primitive magic. Education is in the control of the many monasteries, some of which have more than 1,000 monks. A large number of the population are lamas, mostly celibates. Both polyandry and polygyny are practiced. Some agriculture and herding is possible in the valleys.

SINKIANG (CHINESE TURKESTAN)—Status: Chinese province.

Area: 705,969 square miles.

Population (est. 1946): 3,870,954.

Capital: Urumchi (Tihwa) (50,000).

Governor: Masud Sabri.

Chief exports: wool, cotton, furs, skins, sheep, cattle, horses.

Agricultural products: wheat, corn, rice, cotton, sorghum, beans, fruit.

Minerals: jade, gold.

Largest and most remote of China's provinces, Sinkiang experienced violent Mo-

hammadan uprisings after 1932. The Chinese governor, Gen. Shen Shih-tsal, re-established order in 1937 with Soviet support. In 1943, Russian troops withdrew, taking with them all their economic installations. The province now has considerable local autonomy.

Chinese constitute about 5 percent of the population; there are 14 other ethnic groups, mostly Turki tribes of the Sunni Moslem faith. The Mongol tribes are Lama Buddhists. There are vast stretches of desert and arid land, and the limited area under cultivation is mostly in oases and river valleys. The northern slopes of the Tien Shan range, which divides the province from east to west, provide rich summer grazing lands. There were in 1943, 11,720,000 sheep, 870,000 horses, 1,500,000 cattle and 90,000 camels.

Almost all of the limited foreign trade is conducted with Russia. Some caravan trade is carried on over the high passes which separate Sinkiang from India. There are no railroads, but 2,440 miles of road were built during 1932-42. An air route from Chungking to Moscow crosses the province, with stops at Urumchi and Hami. The largest towns are Shufu (Kashgar) (80,000) and Soche (Yarkand) (75,000), both near the western border. About 84 percent of the population lives in the western side of the province, adjacent to the Soviet Union and separated from China by desert.

Colombia (Republic)

(República de Colombia)

Area: 439,714 square miles.

Population (est. 1945): 10,701,816 (mestizo, 68%; white, 20%; Indian, 7%; Negro, 5%).

Density per square mile: 24.3.

President: Mariano Ospina Pérez.

Principal cities (est. 1944): Bogotá, 425,240 (capital); Medellín, 211,560 (mining); Barranquilla, 197,830 (chief port); Cali, 130,180 (coffee, mining).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Colombia, nearly nine times the size of New York state, is the only country in South America with frontage on both the Pacific and the Caribbean. Its northern coast was one of the first parts of the Americas to be visited by Spanish explorers. Darien, the first permanent European settlement on the American mainland, was founded in 1510, Santa Marta in 1525, and Bogotá in 1538.

New Granada, as Colombia was called until 1861, was comparatively neglected during the Spanish colonial era. After winning independence from Spain during a fourteen-year struggle ending in 1824,

the country established a republic in 1831, including the area that now is Panamá. Intermittent civil war plagued Colombia until 1903, when Panamá, with United States backing, seceded from the republic. Since then, there have been no serious revolutions. The century-old boundary dispute with Peru over Leticia almost led to war in 1931, but a settlement was arranged through the League of Nations in 1934-35.

The administration of Alfonso López, Liberal president in 1934-38, introduced constitutional and labor reforms and the removal of state protection for the Roman Catholic Church. After an intervening Conservative regime, López won the presidency again in 1942 but resigned on Aug. 7, 1945, ostensibly because of Liberal party dissension. The provisional president, Alberto Lleras Camargo, was also a Liberal, but when the Liberal party split again in the elections of May 5, 1946, Mariano Ospina Pérez, a Conservative, won. The Congress remained Liberal, however.

GOVERNMENT AND DEFENSE. Colombia's president, who appoints his own cabinet, is elected every four years and is not eligible to succeed himself immediately. The Senate—the upper house of Congress—is elected for four years by direct vote. The House of Representatives is directly elected for two years. All male citizens over twenty-one may vote. The judicial power is vested in the twelve-member Supreme Court in Bogotá, and there is a Superior Court of three or more judges in each judicial district.

A term of military service is compulsory for men between twenty-one and thirty. The strength of the army in 1947 was unofficially reported at 11,000. With 1,500 personnel, the navy has two modern destroyers, three sea-going gunboats, three patrol craft, four river gunboats and several motor launches. U. S. lend-lease military goods received in 1942-45 totaled \$6,566,951, including 113 planes and various weapons and vehicles.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is free and technically compulsory in Colombia, whose last published illiteracy figure was 48.4 percent. By law, 10 percent of the national budget goes for education. In 1944, 10,788 primary schools reported enrollments totaling 698,561 students; 1,820 secondary and vocational schools, 120,570 students (128 primary and 260 intermediate schools did not report). In addition to the National University, founded at Bogotá in 1572, there are four departmental universities and several private ones.

Because of the former isolation of the interior, the language and manners in Bogotá are more purely Castilian than anywhere else in South America. The white race retains its social and economic

dominance over Indians and Negroes, but race mixture is steadily reducing its numbers. In recent years, notably since adoption of a new labor code in 1944, the working classes have made important gains, including minimum wages, vacations and holidays, accident and sickness benefits, and the protected right of union organization.

Most of the people live by farming and cattle herding, but only a small part of the land is cultivated, and that by primitive means. Colombia's coffee, by far its principal crop, is a mild variety that does not compete with Brazilian types. Production in 1945-46 was 5,478,000 bags of 132 pounds each. Other crops include bananas, coconuts, tobacco, sugar cane, corn, cotton, cacao, beans, rice, tropical fruits and, in the temperate regions on plateaus and in mountain valleys, cereals and potatoes. Cattle in 1945 were estimated at 12,334,000 head.

In 1941, textiles, tobacco products, beverages and other output of Colombia's 1,569 factories had a total value of more than 225 million pesos. To protect trade balances, exports and imports are state-controlled. Imports for 1945 were valued at 281,182,399 pesos as against exports of 246,175,441 pesos. The United States supplied about 64 percent of the imports and took 62 percent of the exports. Coffee was by far the leading export, followed by oil, platinum and gold.

Difficult terrain makes Colombia's rail and road building costly. Rail mileage, including many short feeder lines, was put at 2,056 in 1945; and highway mileage at 42,700, about 18 percent improved. Air transit, however, is well advanced, with seven lines serving the country in 1946 and with tri-weekly service to the United States. Plans were made during 1946 for unification of the national air and merchant marine services with those of Venezuela and Ecuador.

Colombia's proposed 1947 budget provided for expenditures of 291,695,159 pesos. The national debt on May 31, 1946, amounted to 420,279,960 pesos. British investments on Dec. 31, 1946, were £7,126,589 and U. S. direct investments in 1940 were \$111,616,000.

TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE. Through the western half of the country, three great Andes ranges run north and south, merging into one range at the Ecuadorean border. The eastern half is a low, jungle-covered plain, drained by spurs of the Amazon and Orinoco and inhabited mostly by uncivilized Indians.

Colombia's mountain ranges have many lofty, snow-capped peaks, including Mt. Huila, 18,700 feet, and Mt. Tolima, 18,438 feet. The fertile plateau and valley of the

eastern range is the most densely populated part of the country.

Rich in minerals, Colombia has the fifth largest oil industry in Latin America. Production in 1946 was 22,118,000 barrels. The country is also rich in platinum and has world-famous emerald mines at Muzo in the eastern Andes. Mineral production in 1945 included 35,100 fine ounces of crude platinum, 507,000 ounces of gold and 170,000 ounces of silver.

Colombian forests, covering a large part of the country from the western Andes to the eastern plain, are a great but little exploited source of wealth. Products include vanilla, quinine, ipecac, sarsaparilla, gums and balsams, tanning agents, dyewoods, hardwoods and rubber.

Alligators along many of the large rivers are hunted for hides. The rivers and lakes abound with fish and turtles, a source of commercial tortoise shell.

Although Colombia lies almost entirely in the north torrid zone, its climate is tempered by prevailing winds and high altitudes in the western, mountainous area. High temperatures and excessive moisture prevail in the lower areas, along the coast and in the larger river valleys. The dry season occurs in summer.

Costa Rica (Republic)

(República de Costa Rica)

Area: approximately 23,000 square miles.

Population (est. 1944): 725,149 (white and mestizo, 97%; Negro, 2%; Indian, 1%).

Density per square mile: 31.5.

President: Teodoro Picado Michalski.

Principal city (est. 1944): San José, 77,182 (capital and only large city).

Monetary unit: Colón.

Language: Spanish.

Religion: Roman Catholic.

HISTORY AND GOVERNMENT. Costa Rica, discovered and probably named by Columbus in 1502, is distinguished in modern times as the most orderly and democratic of all the Central American nations. A Spanish province as early as 1530, it proclaimed its independence in 1821, and was a member of the Central American Union from 1823 to 1838. Aside from boundary disputes with Panamá and Nicaragua, Costa Rica's modern history has been comparatively tranquil. President Alfredo González was forced from office by a coup d'état in 1917, and his successor, Federico Pinco, was overthrown in 1919, but since then Costa Rican internal affairs have been peaceful. President Picado's National Republican party maintained its dominance in the 1946 congressional elections.

The President is elected popularly for

four years, and is not eligible for re-election until after one term has intervened. The one-house Constitutional Congress of forty-four members is elected for four years, half the membership being renewed every two years. Military service is voluntary. There is an army of 500 men, a police force of 1,000, and 700 coast guards.

SOCIAL AND ECONOMIC CONDITIONS. Costa Rica's illiteracy rate of approximately 15 percent is the lowest in Central America, with elementary education free and compulsory. In 1944, a total of 786 primary schools had 76,727 students; 50 intermediate schools, more than 7,000 students; and the National University at San José, more than 800. Since 1944, English has been taught in all primary schools.

Coffee, bananas, abacá fiber and cacao are the basic products of Costa Rican agriculture, which is characterized by the prevalence of small land holdings. Cotton, sugar cane, tobacco, corn, beans, rice and potatoes are subsidiary crops. Cattle are raised mainly for dairying.

Manufacturing is virtually limited to locally-consumed products, chiefly furniture, fine woodwork and tobacco.

Coffee normally represents 65 percent of the country's export trade, about two-thirds of which goes to the United States. Bananas, cacao and abacá fiber are the other main exports. Principal imports are cotton, oil, machinery, rail equipment, autos and iron products. Exports in 1945 totaled \$11,611,709 (84.5 percent to the U. S.) and imports, \$26,948,122 (70.7 percent from the U. S.). In 1942 the rail system totaled approximately 450 miles; improved highways, 771 miles.

In recent years Costa Rican expenditures have exceeded revenues, and the general government financial position is unfavorable. The deficit for 1946 was 15,703,902 colones. In 1945 the public debt totaled 223,000,000 colones.

Gold (1945 exports: \$96,659) is the most valuable mineral, although silver, manganese, mercury and sulfur also exist. Oil indications have been found in the south. The mountain slopes yield such forest products as balsa, cedar, dyewood, mahogany and rosewood. The fisheries along the coast are valuable; tuna, shark-livers and live turtles are important products.

TOPOGRAPHY AND CLIMATE. Most of Costa Rica is elevated tableland, from 3,000 to 6,000 feet above sea level, with sharp slopes to the Caribbean and Pacific. Cocos Island, about 300 miles off the Pacific Coast, is under Costa Rican sovereignty; although it is mostly tropical jungle, it is of potential strategic importance in the defenses of the Panama Canal.

The weather is cool and refreshing in the Costa Rican highlands, with average

temperatures of 68°, and San José is increasing in importance as a tourist resort. Along the coasts, the mean annual temperature is about 82°. The rainy season is usually from April or May to December.

Cuba (Republic)

(República de Cuba)

Area: 44,217 square miles.

Population (est. 1946): 5,051,850 (white and mulatto, 75%; Negro, 24%; Mongoloid, 1%).

Density per square mile: 114.3.

President: Dr. Ramón Grau San Martín.

Principal cities (census 1943): Havana, 659,883 (capital, industrial center); Santiago de Cuba (1946 est.) 152,000 (seaport, mining); Marianao, 120,163 (suburb of Havana); Camagüey (1946 est.) 87,009 (cattle, sugar); Matanzas, 54,844 (seaport, sugar).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. The history of Cuba, largest of the many Caribbean islands, began for white men with discovery by Columbus on his first voyage in 1492. It was a Spanish colony until 1898, except for brief British occupancy in 1762-63. Open war raged between Cuban rebels and Spanish troops from 1867 to 1878. Fighting broke out again in 1895, and when the United States threatened to intervene, Spain felt its national dignity had been wounded. Strained relations between Spain and the U. S. led to war when the U. S. battleship *Maine* was blown up in Havana harbor in Feb., 1898. At the end of the brief Spanish-American War, Spain gave up Cuba.

Until creation of the Cuban republic in 1902, the island was ruled by United States military authorities. For the first thirty-two years of the republic's life, the United States held the right to intervene in any crisis—a right which was invoked during insurrections in 1906, 1912 and 1917.

Corruption bedeviled Cuba after World War I, particularly during the eight-year presidency of Gerardo Machado, who was ousted in a 1933 revolution. Five different presidents tried to rule in the next few months; out of this political whirligig came the dictatorship of Fulgencio Batista, who climbed almost overnight from army sergeant to army commander-in-chief. In 1940 Batista legalized his reign by being elected to a four-year presidential term. He was succeeded in 1944 by Dr. Ramón Grau San Martín, backed by the Republicans and his own Auténtico party. Batista forces kept control of Congress until 1946, when Grau, with a socialistic program, won dominance in the House of Representatives.

GOVERNMENT. Cuba's president is elected for a 4-year term by direct popular vote,

in which women take part. The Cabinet, though named by the president, is responsible to the Congress—a 54-member Senate and a 134-member House, both elected for four years. Much Cuban lawmaking is done through presidential decree, reviewable by the Supreme Court.

Compulsory military service was established in 1942. The army numbers about 15,000; the navy, 2,700, manning some twenty small coastal craft. The air force has 50 combat planes. Two U. S. air bases and one naval base built in World War II at a cost of more than \$30,000,000 were turned over to Cuba in 1946. However, the United States retained its long-held naval base at Guantánamo.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and compulsory from 7 to 14. Schools numbered about 5,400 in 1946, enrolling some 520,000 pupils. Literacy was estimated at close to 70 percent.

Recent social legislation has effected a 44-hour week, a month's vacation for each eleven months worked, and compulsory maternity and accident insurance. The proportion of unionized workers is the highest in Latin America.

Half of the employed are engaged in agriculture, which normally accounts for more than 90 percent of the exports. Often jolted by fluctuations in the price of sugar, of which it produced 4,476,000 short tons in 1946, Cuba is now seeking to vary its agricultural production. About two-thirds of the cultivated area is devoted to sugar cane, and Cuba is the second largest producer of sugar in the world. Other important crops are tobacco (1945-46: 84,700,000 lbs.); coffee (1945-46: 383,403 bags); cacao, fruits, vegetables, henequen, corn, pineapples and beans. The livestock and dairy industry has progressed greatly in the last two decades.

Manufactured products include sugar, molasses, syrup, brandy, rum, alcohol, cigars, cigarettes, cigar boxes, sponges, cement, cordage, salt, dressed hides, dairy products and canned goods. The leading industry is the processing of sugar cane and its products. Plans were announced in 1946 for plastic and rayon plants.

Exports in 1945 totaled about \$409,925,000 (\$427,058,296 in 1944), and imports in 1945 came to \$238,935,000 (\$208,643,434 in 1944). In value, sugar accounted for about 80 percent of the exports, and tobacco 8 percent. The U. S. furnished 76.8 percent of imports and absorbed 78.6 percent of exports.

Railways in 1945 were estimated at 4,880 miles, plus 7,035 miles of private lines on sugar estates. In 1942 there were 2,390 miles of improved highway, and about 2,000 miles of unimproved roads. Domestic airlines are operated by the Cuban National

Aviation Company, a Pan American subsidiary.

The preliminary estimate of the 1947 budget, regular and extraordinary, was 190,000,000 pesos, the highest in Cuban history. Actual revenue in 1945 was 177,126,189 pesos. The public debt on Aug. 31, 1944, totaled 178,547,600 pesos. Extra-budgetary expenditures have been heavy recently. American direct investments in 1940 came to \$559,797,000, and British investments on Dec. 31, 1946, £26,779,505.

TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE. Long, narrow Cuba has maximum dimensions of 730 by 160 miles, and is approximately the same size as Pennsylvania. It has mountainous areas in the southeast, central area and west, but the rest is flat or rolling. The coastline of more than 2,100 miles is indented by many large bays. Cuba's numerous short rivers are of slight importance commercially.

Rich mineral beds, mostly in the eastern province of Oriente, include iron, copper, manganese, chromium and nickel. Iron ore reserves, estimated at 3,500,000,000 tons, are 90 percent held by U. S. steel interests. Virtually all mineral exports go to the United States.

Cuba has an estimated 3,500,000 acres of wooded land, with valuable cabinet woods, such as cedar and mahogany, as well as fibers, resins and oils. Lobsters, oysters, crabs and shrimp are major sea food products. About 1,000,000 lbs. of lobster valued at \$585,811 were exported in 1945.

The tempering influence of the trade winds on the island's tropical climate makes Havana's average temperature 77°, with a range of only 10° (71° to 81°). The dry season lasts from November to April, and the warmer wet season occurs thereafter. Mean annual rainfall at Havana is about 50 inches.

Czechoslovakia (Republic)

(Československa Republika)

Area: 49,321 square miles. (Excluding Ruthenia)

Population (census 1930): 14,001,200 (Czech, 69.4%; German, 23.6%; Magyar, 5%; Ruthenian, .7%; Polish, .6%; others, .7%).

Density per square mile: 283.9.

President: Eduard Beneš.

Premier: Klement Gottwald.

Principal cities (census 1930): Prague (Praha), 848,823 (capital, industrial center); Brunn (Brno), 264,925 (textiles); Ostrava (formerly Moravská Ostrava), 125,347 (iron and steel); Bratislava, 123,852 (Danube port); Pilsen (Plzeň), 114,704 (Skoda steel works).

Monetary unit: Koruna.

Religions (1930): Roman Catholic, 73.54%; Protestant, 7.67%; Czechoslovak Church, 5.39%; Greek Catholic, 3.97%; Jewish, 2.42%; others, 7.01%.

HISTORY. Born as a nation out of World War I, Czechoslovakia was among the first to be hit by the German aggressions that led to World War II. The country, about the size of Louisiana, was wiped off the map by appeasement and partition in 1938-39, and at its rebirth in 1945 was well under the shadow of Russia, with Communists strong in the government. By 1947, however, Czechoslovakia had made by far the greatest progress in economic reconstruction of all Soviet satellites, preserving at the same time most of the democratic liberties which are an integral part of Czechoslovak tradition. The Soviet influence on its foreign policy was demonstrated by its failure to join preliminary discussions for the "Marshall Plan."

It was probably about the 5th century A.D., that the ancestors of the Czechs and Slovaks settled in the region of modern Czechoslovakia. Slovakia passed under Magyar domination, but the Czechs founded the kingdom of Bohemia, which was among the most powerful in Europe for centuries. German encroachment began in the 12th century and was furthered by the election in 1526 of a Hapsburg as Bohemian king. After the Czechs rebelled in 1618 and were defeated at the Battle of White Mountain in 1620, they were ruled for the next 300 years by the Hapsburgs as part of the Austro-Hungarian Empire. In World War I, Czech patriots, notably Thomas G. Masaryk, went abroad to promote sympathy for Czech independence, while Czech legions fought against the Central Powers. On Oct. 28, 1918, Czechoslovakia proclaimed itself a republic; shortly thereafter Masaryk was unanimously elected first president.

Between World Wars I and II, Czechoslovakia supported the League of Nations, formed the Little Entente with Yugoslavia and Rumania, and cooperated closely with France. President Masaryk resigned in 1935, two years before his death at the age of eighty-seven, and was succeeded by Dr. Eduard Beneš.

Meanwhile, the German plan of aggression was under way. Czechoslovakia's German minority, led by Konrad Henlein, began demanding autonomy. The government granted many concessions which, of course, were not enough to suit the Germans. The beginning of the end came at the Munich conference on Sept. 30, 1938, when France and Britain agreed that the Nazis could take the Czech Sudetenland on the German border. Dr. Beneš resigned on October 5, and Czechoslovakia became a federal union in the German orbit. The Poles, in the meantime, had grabbed Czechoslovakia's Teschen area, and Hungary had taken areas in Slovakia and Ruthenia. In March, 1939, the Nazis set up Slovakia as a puppet state, declared Bohemia and Moravia to be Nazi protector-

ates, and gave Hungary the remainder of Ruthenia. Both Slovakia and Bohemia-Moravia were occupied by German troops.

Czechoslovakia suffered cruelly under Nazi occupation. By sabotage and slowdowns, the Czech patriots and workers hindered the Germans, and on May 27, 1942, the German administrator, Reinhard Heydrich ("The Hangman") was fatally wounded. The Nazis responded savagely. The village of Lidice was destroyed completely, and all its men were shot.

Meanwhile, Dr. Beneš had organized a government-in-exile in London in 1940, with Jan Srámek as Premier and himself as President. It was recognized by France, Britain and the U. S. Soon after the government returned to Czechoslovakia in April, 1945, Ruthenia, the easternmost province, was ceded to Russia. A 300-member constituent assembly elected May 26, 1946, began to draft a new constitution.

GOVERNMENT AND DEFENSE. Of Bohemia-Moravia's 231 seats in the Constituent Assembly, the Communists hold 93, National Socialists 55, Christian Democrats 46 and Social Democrats 37. Slovakia's 69 seats are divided as follows: Christian Democrats 43, Communists 21, Freedom party 3 and Labor party 2.

On July 3, 1946, Communist Premier Klement Gottwald formed a 26-member coalition cabinet in which Communists held nine places, with representation also going to the National Socialists, Slovak Christian Democrats, Czech Christian Democrats and Social Democrats.

The new army, based on a cadre of Czech units which fought with the Red Army during World War II, is being trained and equipped by the Soviet Union with organization and armament on the Russian pattern. Its estimated strength is 160,000, including police units.

SOCIAL AND ECONOMIC CONDITIONS. Illiteracy is extremely low in Bohemia, higher in Slovakia. In 1946, there were 14,817 elementary schools with 1,528,081 students; 261 secondary schools with 101,730 students; 1,205 vocational schools with 284,122 students; and 15 universities with 56,631 students.

One of the country's greatest problems is the ethnic variety of its population. In view of the traitorous role played by German and Hungarian minorities in the disintegration of Czechoslovakia, the government decided to remove them from the country. In sharp contrast to its prewar policy, the government determined to make Czechoslovakia an exclusive national state for Czechs and Slovaks. Each race is to have local autonomy, and no national minorities will be tolerated.

Economic nationalization is progressing rapidly. Decrees issued on Oct. 24, 1945, ordered the nationalization of nearly all

industrial corporations with more than 500 employees. All national resources, public utilities, transport, commercial banks and insurance companies became state property. About 2,000 industrial concerns had been nationalized by mid-1947, and organized into 250 national corporations. Redistribution of large estates had already been accomplished following World War I by the 1919 Land Reform Law, which made it illegal for one person to own more than 370 acres of arable land. The social insurance system covers accident, sickness, disability, old age and death.

According to the last census, 34.64 percent of the employable population was engaged in agriculture, 34.94 percent in industry, 7.43 percent in commerce, 5.53 percent in transportation and 4.86 percent in public service and the professions.

In 1945 about 41 percent of the total area was arable, 31 percent forest, and 15 percent meadows and pastures. Sugar beets (1945: 3,657,479 tons), wheat (1945: 1,121,726 tons), corn and high-grade barley and hops for beer-brewing are cultivated in the low-lying areas. In more elevated regions the cultivation of potatoes (1945: 6,747,140 tons), rye (1945: 1,032,728 tons) and oats predominates. Higher lands are also used for growing fodder crops or for grazing. Livestock in 1945 included 3,933,024 cattle, 2,181,284 hogs, 1,306,929 goats and 13,785,076 poultry.

The highly developed position of Czech industry is important in foreign trade, since production far exceeds domestic needs. Agricultural products, led by sugar, provide raw materials for important industries. The beer industry has attained world-wide repute, and there are also spirits, malt and foodstuffs industries. Abundance of coal and presence of iron ore give the country a big metallurgical industry. Output of steel in 1946 was estimated at 1,850,000 short tons; of pig iron, 1,050,000 short tons. The Skoda steel works at Pilsen are one of the largest in Europe. Other industries are glass, porcelain and pottery making, while large forest areas provide raw material for the timber, paper and cellulose industries. Also highly developed are the textile industries, including cotton, wool, flax and jute production, and the shoe industry. The famous Bat'a shoe factories are at Zlín.

Exports in 1946 were valued at 14,345,000,000 koruny and imports at 10,239,000,000 koruny (excluding UNRRA shipments). Leading exports were finished products (62%) and foodstuffs and beverages (21%). The chief customers were Switzerland (14.7%), U.S.S.R. (11.9%), Sweden (8.0%) and the United States (7.5%). The chief suppliers were Switzerland (10.6%), U.S.S.R. (9.5%), Sweden (8.9%) and Britain (8.8%).

The disadvantages of Czechoslovakia's landlocked position are offset somewhat by a well-developed system of internal communications. Czech railroads, totaling 8,197 miles in 1945, form a direct connection between the systems of eastern and western Europe, making the country an important communications center. Highway mileage in 1945 totaled 43,623.

Navigable streams in 1946 totaled 1,156 miles in Bohemia-Moravia, and 111 miles in Slovakia. Internal waterways and rivers connect Czechoslovakia with the Black Sea and the North Sea.

Government expenditures in 1947 were estimated at 76,300,000,000 koruny as against revenues of 48,200,000,000 koruny, thus leaving a heavy deficit, ascribed in official circles to large-scale rehabilitation requirements. About 16.5 percent of the revenue was expected to come from nationalized enterprises. The national debt on Dec. 31, 1945, was 97,641,000,000 koruny.

Most important of Czechoslovakia's varied minerals are pit coal and lignite, with the principal coal fields in the Ostrava-Karvinná area, connected with the Polish fields of Upper Silesia. Production in 1946 was 15,585,000 short tons of hard coal and 21,460,000 short tons of lignite. Other minerals are antimony, gold, magnesite, oil, silver and zinc.

The estimated production of iron ore in 1945 was 307,897 tons, but much ore is imported to meet the demands of Czechoslovakia's flourishing iron and steel industry. Excellent porcelain raw materials, particularly kaolin, are obtained in western Bohemia and southern Moravia, with an annual yield of about 400,000 tons.

Czechoslovakia is one-third wooded and is one of the richest forest lands in Europe, with a high production of lumber.

TOPOGRAPHY AND CLIMATE. A long and narrow country, with a length of 594 miles from east to west and a width varying from 45 to 175 miles, Czechoslovakia lies athwart the great central European watershed between the Baltic, Black and North Seas. Mountains make several of its boundaries—the Carpathians by Poland on the northeast, the Bohmerwald by Austria on the southwest, and the Erzgebirge and the Sudetens by Germany on the northwest and north. Many of the valleys are made fertile by the Danube, Elbe and Vltava (Moldau) rivers and their tributaries. Navigation on the Elbe and Danube is usually stopped by ice for six to eight weeks each year.

At Prague, in Bohemia, the average annual temperature is 48.2° (29.6° in January; 66.2° in July) and the average annual rainfall is 19.6 inches. The corresponding figures for Presov, in eastern Slovakia, are 46.8° and 25.6 inches. Heavy winter snowfall is common in the highlands.

Denmark (Kingdom)

(Kongeriget Danmark)

Area: 16,575 square miles.

Population (est. 1945): 4,024,000 (almost entirely Danish).

Density per square mile: 242.7.

Sovereign: King Frederick IX.

Prime Minister: Knud Kristensen.

Principal cities (est. 1945): Copenhagen, 731,707 (capital); Aarhus, 107,393 (shipping, commercial center); Odense, 92,436 (meat, dairy products); Aalborg, 60,880 (seaport).

Monetary unit: Krone.

Language: Danish.

Religion: Evangelical Lutheran (state).

HISTORY. Denmark—comprising a peninsula and 500 islands in the Baltic Sea—is a vast produce farm, less than half the size of Indiana. Because of its rich production of meat, butter and eggs, it suffered almost no material damage from German occupation in World War II. Needing the Danish food, the Nazis permitted the Danish farmers to continue producing, and when the war was over and much of Europe was a starving ruin, Denmark emerged as a land of comparative plenty, although plagued in 1947 by lack of foreign exchange.

A tiny nation today, Denmark once was powerful and feared. After conversion of the Danes to Christianity in the 9th and 10th centuries, Canute the Great, king of Denmark, conquered England in 1015. In the 12th and 13th centuries, under Kings Valdemar I and II, Denmark reached the zenith of its power. By the terms of the Union of Kalmar in 1397, the nation was united with Norway and Sweden. Sweden left the Union in 1520, but Denmark and Norway remained united until 1814. In the Napoleonic Wars Denmark picked the wrong side; when Napoleon was defeated, Norway was given to Sweden and Helgoland to Britain in 1814. Denmark lost again in 1864 when, after a war with Austria and Prussia, it lost Holstein, Schleswig and Lauenburg to Prussia.

The country, which had become a liberal constitutional monarchy in 1849, stayed neutral in World War I, after which a plebiscite returned to it a part of North Schleswig. In 1917 Denmark sold the Virgin Islands to the United States for \$25,000,000.

The Social Democrats, moderately socialistic, dominated Danish politics in 1924-26 and 1929-40 during an era marked by active participation in the League of Nations and close harmony with Norway and Sweden.

On May 31, 1939, eager for peace, Denmark signed a ten-year non-aggression pact with Germany. Less than a year later, on April 9, 1940, Germany invaded neutral Denmark. The British countered by occupying the Faeroe Islands and Iceland. Iceland

declared its complete independence from Denmark in 1944, thus breaking a union which had existed since 1280.

To save the country from destruction, King Christian X accepted the German occupation without armed resistance, and the Danish policy became one of passive resistance against Hitler's attempts to form a "model protectorate." During 1944-45, the Danish underground became increasingly active and effective. The cabinet and parliament (Rigsdag) were considered suspended after Aug. 29, 1943, when the Danes refused to accede to German demands that saboteurs be tried in German courts.

Following the German surrender in 1945, the Danes quickly took over their government again with Social Democrat Vilhelm Buhl as premier. Buhl resigned when his party lost ground in the national elections of Oct. 30, 1945, and the King designated Liberal leader Knud Kristensen to form a new all-Liberal cabinet in Nov., 1945.

King Christian X—revered symbol of Danish resistance in World War II—died April 20, 1947, and was succeeded by his elder son, Frederick.

Frederick IX, of the house of Schleswig-Holstein-Sonderburg-Glücksburg, Denmark's 49th king, was born March 11, 1899, son of the late King and of Princess Alexandrine of Mecklenburg. In 1935 he married Princess Ingrid of Sweden, by whom he has three daughters. Succession is limited to the male line, and the heir presumptive is his brother, Prince Knud, born in 1900. The King's uncle is King Haakon VII of Norway.

GOVERNMENT AND DEFENSE. Under the constitutional act of 1915, amended in 1920, Denmark is a constitutional hereditary monarchy. Legislative authority rests jointly with the king and the two-house Rigsdag. The 149-member Folketing (lower house) is popularly elected every four years but can be dissolved by the king at will. Members of the Landsting (upper house) are elected for eight years—56 by popular vote and 19 by the outgoing Landsting. The cabinet, presided over by the king, who designates the premier, is the highest executive power, dealing with all new bills and important measures.

The party lineup in the Folketing is Social Democrat 48, Liberal 38, Conservative 26, Communist 18, Radical Liberal 11, others 8.

Military service is compulsory. The army, numbering about 10,000, is being re-equipped with British assistance. One infantry brigade of 4,000 men is stationed in the British zone of Germany. At the beginning of 1947, the navy had two destroyers nearing completion, three torpedo boats and six under construction, two submarines, two frigates, a corvette and other smaller craft. Personnel numbers 4,000.

SOCIAL AND ECONOMIC CONDITIONS. Under the Danish system, schooling is compulsory from 7 to 14 and, for the most part, free. The famous popular high schools (*folkehøjskoler*) for adults number about 55, all private but assisted by the state. The Royal University of Copenhagen, founded in 1479, has about 6,000 students and that of Aarhus about 500. Elementary schools in 1944 had about 450,000; middle and secondary schools in 1940 had 67,064.

Almost the entire population belongs to the Lutheran Church, which is the established religion of the state, but there is complete religious toleration.

Social legislation is well advanced and provides for medical aid, poor relief, child welfare and workmen's compensation. The National Insurance Act requires everyone from 21 to 60 to belong to an approved sickness benefit society, to which the state also contributes. The cooperative movement is also well organized.

Approximately ninety percent of the land is productive and about three-quarters is actually farmed. Agrarian reform laws have operated to bring about a large number of small holdings. About two-fifths of the cultivated area is devoted to cereals, led by barley, mixed grain, oats, rye and wheat. Root crops (fodder), potatoes and sugar beets also are important. The principal source of exports and of the nation's wealth is dairy farming and the production of bacon, milk (1946: 5,043,000 short tons), butter (1946: 155,314 tons), pork (1945: 293,000 tons), beef and veal (1945: 127,000 tons) and eggs (1945: 55,000 tons). Livestock in 1944 included 3,185,823 cattle, 1,555,176 milk cows and 2,032,623 pigs. Farming keeps pace with scientific advances.

Denmark produces primarily for home consumption, though some industrial products, such as Diesel motors, are large exports. In 1944 there were 6,717 industrial establishments with 195,097 workers and an output valued at 4,791,711,000 kr. The largest industries were food-processing and iron and metal. Others were chemical and pharmaceutical, wood and paper, clothing, textiles, machinery, beverages and leather.

The per capita rate of Denmark's foreign commerce is exceptionally high. Exports in 1946 totaled 1,611,000,000 kr. (1945: 904,000,000 kr.) and imports, 2,836,000,000 kr. (1945: 696,000,000 kr.). Leading exports were industrial products (26.8%), butter (21.8%), bacon (10.7%), fish (9.6%) and meat (9.1%). Leading imports are coal and coke, oilcake (for fodder) and petroleum. Britain is Denmark's leading customer and source of imports. The unfavorable balance of trade in 1946 forced the nation to curtail needed imports in 1947 and to concentrate upon new export markets to obtain foreign exchange abroad.

Before World War II the Danish merchant marine, fourth largest in the world on a per capita basis, totaled 2,705 vessels of 1,175,000 tons. Wartime losses were estimated at 518,000 tons. Regular communications with foreign countries are mainly westward by sea. There are Swedish ferry services from Copenhagen to Malmö and from Helsingör (Elsinore) to Helsingborg. The main land route to the rest of the continent is the railway via Padborg and Schleswig to Hamburg. Railway mileage totals about 3,050, nearly half nationalized. Train-ferry services for inter-island communication are highly organized. Motor transport also is well advanced, with about 35,000 miles of roads.

Ordinary government expenditures for 1946-47 were estimated at 1,570,400,000 kr. and receipts at 1,230,500,000 kr. The capital account was estimated to balance at 1,481,000,000 kr. The public debt on Sept. 30, 1946, totaled 4,442,400,000 kr.

Mineral resources are negligible, although some coal, granite and kaolin are found on the island of Bornholm. Large quantities of coal and coke must be imported; industrial production was retarded by shortages in late 1946 and early 1947. Peat bogs supply an important source of fuel. Forest resources are unimportant.

The fishing industry, centered at Copenhagen but carried on also in the shallow fiords and in the deeper waters of the Baltic, North Sea and Skagerrak, is a basic part of the Danish economy. The 1944 catch of 165,000 tons was valued at 150,000,000 kr. Normally, about two-thirds of the catch is exported, usually fresh, ice-packed, or live.

TOPOGRAPHY AND CLIMATE. Denmark, only three miles from Sweden at the closest point, consists of the Jutland peninsula and the islands in the Baltic. The largest islands are Zealand, the site of Copenhagen; Fünen; and far to the east, Bornholm. The narrow waters to the north are called Skagerrak; and to the east, Kattegat.

The terrain of the whole kingdom is low but not flat. Its highest point is about 500 feet, and there are many lakes, ponds and short rivers. Sand dunes line the western Jutland coast almost without a break.

Denmark's climate is like that of eastern England, but with colder winters and warmer summers. The average annual temperature is 45.2° (61° in July; 32° in January). Average rainfall is 24 inches; thunderstorms are frequent in summer.

Outlying Territories

FAEROE ISLANDS—Status: Administratively a county of Denmark, represented in the Rigsdag. Area: 540 square miles.

Population (1938): 26,000.

Capital: Thorshavn (population 3,611).

Government: Danish-appointed governor and locally elected assembly.

Principal products: cod, whale oil, cod liver oil, wool, fertilizers, skins and leather.

This group of 21 islands, lying in the North Atlantic about 200 miles northwest of the Shetland Islands, joined Denmark in 1386 and has since been part of the Danish kingdom. The islands were occupied by British troops during World War II, after the German occupation of Denmark. The principal pursuits are fishing and sheep grazing. The predominant *Sjálvstýrisflokkur*, or Home Rule party, heads a movement seeking autonomy. Those favoring independence won a slight majority in a plebiscite held Sept. 14, 1946, but subsequent elections gave pro-Danes a majority. Hence, negotiations were begun in April, 1947, to work out a system of local autonomy under continued Danish rule.

GREENLAND—Status: Colony.

Area: 839,782 square miles. (almost 85 percent glacier).

Population: Natives, 17,600; Danes, 600.

Government: Two inspectorates (Godthaab and Godhavn) supervised by the director for Greenland in Copenhagen; no self-government.

Principal products: cryolite (1944: 17,562 tons; 1945 exports to U. S.: 20,106 tons), fish, hides and skins, whale and fish oil, marble.

Greenland, the world's largest island, was colonized in 985-86 by Eric the Red. Danish sovereignty, which covered only the west coast, was extended over the whole island in 1917. In 1941 the United States signed an agreement with the Danish minister in Washington, placing it under U. S. protection during World War II but maintaining Danish sovereignty. U. S. weather stations were built on the island during the war. Greenland is the only source of natural cryolite, important in the manufacture of aluminum. Trade (except cryolite) is a Crown monopoly.

Dominican Republic

(República Dominicana)

Area: 19,327 square miles.

Population (est. 1946): 2,089,448 (mestizo and mulatto, 70%; white, 15%; Negro, 15%).

Density per square mile: 108.1.

President: Rafael Leónidas Trujillo y Molina.

Principal cities (est. 1946): Ciudad Trujillo, 131,271 (capital; sugar); (est. 1945): Santiago de los Caballeros, 54,113 (tobacco); San Pedro de Macoris, 22,728 (sugar port); Puerto Plata, 15,610 (seaport).

Monetary unit: Dominican peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY AND GOVERNMENT. The Dominican Republic (formerly Santo Do-

mingo) occupies the eastern two-thirds of the island which Columbus named La Española (now Hispaniola) when he discovered it on his first voyage in 1492. The other third is occupied by the republic of Haiti. The capital, Ciudad Trujillo, founded in 1496, is the oldest white settlement in the Western Hemisphere.

The Dominican Republic was variously under Spanish, French and Haitian domination until it established its independence in 1865 and then plunged into a notoriously unstable political history. U. S. Marines occupied it from 1916 to 1924, when a new constitution was adopted. Since 1930 the constitution has meant little. In that year Rafael Leónidas Trujillo y Molina, an army general, was elected president. He swiftly put down all opposition and became a virtual dictator. President most of the time since 1930, Trujillo has given his country an "orderly" regime with improved irrigation, roads, sanitation and schools, but the people have a minimum of personal liberty. Trujillo was elected with little opposition for another term in May, 1947.

The president is supposed to be elected every five years by popular vote, in which women take part, and he is eligible to be re-elected indefinitely. The 19-member Senate and the 40-member Chamber of Deputies are also elected for five years. Each of the eighteen provinces has an appointed governor. There is a 4,000-man army, a small air force and several coast patrol craft.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and compulsory from 7 to 14. However, the illiteracy rate was at least 60 percent in 1946, when there were approximately 2,000 schools, with enrollment of more than 210,000. The government began construction of a university city in 1946.

Primarily agricultural, the country produces sugar (1946: 505,709 short tons), coffee (1944-45: 56,100,000 lb.), tobacco (1946: 31,060 short tons), cacao, bananas, rice, corn, cassava, beans and sweet potatoes. The raising of hogs and cattle has been expanded recently, and the government is attempting to diversify crops to lessen the republic's dependence on sugar exports. Sugar refining, largely U. S. controlled, is the only important manufacture.

Exports, mostly sugar, were valued at 43,564,113 pesos in 1945; imports in 1945 were valued at 18,125,622 pesos. Cacao, coffee, molasses and tobacco are other chief exports. The main imports, mostly from the U. S., are cotton goods, iron and steel products, chemicals and machinery.

Transit facilities include about 170 miles of public railway, more than 600 miles of sugar plantation railway, and more than 2,000 miles of highway.

The 1946 budget estimated expenditures at \$22,598,644 and revenues at \$26,333,644.

Mineral resources are limited and production is negligible. Exports in 1945 included 20,000 grams in gold, and 3,585 short tons of gypsum. The more readily accessible timberland has been thoroughly exploited, producing mahogany, *lignum vitae* and pine.

TOPOGRAPHY AND CLIMATE. Crossed from northwest to southeast by a mountain range with maximum elevations exceeding 10,000 feet, the country has fertile, well-watered land on the northeast side, where nearly two-thirds of the population lives. The southwest part is arid and with poor soil except around Ciudad Trujillo. The country has many good harbors.

There is little range in temperature, with mean January average of 74°, and August average of 81°. The elevated interior is cooler than the coastlands. Rainfall occurs mostly from May to November.

Ecuador (Republic)

(República del Ecuador)

Area: 104,510 square miles.

Population (est. 1945): 3,241,311 (60% pure Indian, 25% mestizo, 15% white).

Density per square mile: 31.0.

President: Carlos Julio Arosemena.

Principal cities (est. 1944): Quito,* 211,174 (capital); Guayaquil, 172,948 (chief port); Cuenca, 52,519 (trading center); Riobamba, 27,459 (sugar, cereals).

Monetary unit: Sucre.

Language: Spanish.

Religion: Roman Catholic.

*1947 census.

HISTORY. Mostly forested and mountainous and a little larger than Colorado, Ecuador has a long history replete with the forceful rule of dictators. The Spanish under Francisco Pizarro conquered the land in 1532 by defeating the Inca Atahualpa. The first revolt against Spain occurred in 1809, but the victory was not complete until the Battle of Pichincha on May 24, 1822. Ecuador then joined Venezuela and Colombia in a confederacy founded by Simón Bolívar and known as Colombia, but withdrew amicably and became independent in 1830. The country's subsequent history has been largely one of dictatorships, notably under Juan José Flores, Gabriel García Moreno and Eloy Alfaro. Since 1900, administrations have fallen, usually by force, on the average of every two years. Shortly before the 1944 elections, President Carlos Arroyo del Río was forcibly replaced by José Velasco Ibarra, recalled from exile in Argentina. Velasco Ibarra, confirmed in office by the voters later in the same year, followed the

old pattern by assuming the role of dictator in 1946 and suppressing opposition. In Aug., 1947, Col. Carlos Mancheno seized control of the government in a bloodless revolution and deposed Ibarra. Mancheno, in turn, was replaced by Ventimiglia, when opposing forces began to make headway ten days later. Arosemena took over for a one-year term when conditions became settled.

For more than a hundred years, Ecuador disputed its boundary with Peru, frequently resorting to arms. After hostilities started again in 1941, both nations submitted to mediation, and when the decision was made final in 1944, Ecuador lost most of the disputed area.

GOVERNMENT AND DEFENSE. Under the 1945 constitution, Ecuador elects a president for four years by direct vote, and he is ineligible for further service until at least one term intervenes. The congress is unicameral, elected for two years. There are 17 provinces and one territory, the Galápagos Islands, 650 miles off the coast.

Military service is compulsory at eighteen. The army numbers 10,000 and 40,000 reserves. A 1,030-ton training ship and several smaller craft make up the navy. There is an aviation school at Guayaquil and a naval school at Salinas. To strengthen defenses of the Panama Canal, the U. S. built a base on Galápagos during World War II; it reverted to Ecuador in 1946.

SOCIAL AND ECONOMIC CONDITIONS. Education is free, compulsory and under state control, but illiteracy is very high—an estimated 62 percent in 1945. School enrollment in 1944 was put at less than 300,000 in about 2,700 primary and 40 secondary schools. Ecuador has universities at Quito, Guayaquil and Cuenca.

Although agriculture is the basis of Ecuador's economy, less than 12,000,000 acres are devoted to it. Cacao, the chief crop (1945: 86,000 short tons) is grown in the coastal regions and lower river valleys, along with coffee, bananas, rice, sugar cane, tobacco and cotton. The plateaus and mountain valleys are used for grazing and dairying, and raising cereals and potatoes. Ecuador's main manufactured product is the Panama hat, made of Toquilla straw; 1946 exports were valued at \$4,861,000.

Total imports in 1946 were \$31,538,640, of which about 60 percent was supplied by the U. S.; exports were valued at \$36,003,800, of which the U. S. took 37 percent. Chief exports were rice (41%), cacao (14.4%), straw hats (13.5%), metals, coffee and petroleum.

Railway mileage in 1945 was 765, all nationalized. The principal road connects the chief port, Guayaquil, with Quito. Highway mileage was 4,280, of which 2,730 were termed all-weather.

The 1946 budget was estimated at \$21,170,000. American direct investments in 1940 were \$5,107,000; British investments on Dec. 31, 1946, were \$3,807,340. U. S. Export-Import bank loans totaled \$16,800,000 as of June 30, 1946, with \$5,800,000 outstanding. The national debt on Dec. 31, 1945, was \$45,534,000.

Ecuador mined 70,280 troy oz. of gold and 220,878 oz. of silver in 1945. Copper and lead also are mined. In 1945, 2,622,724 barrels of petroleum were produced; average production in 1946 was 6,485 barrels daily. The country is the world's chief source of light, strong balsa wood, and exported 8,100 short tons in 1945, but exports have declined steadily since 1943. In the same year 2,170 short tons of rubber were produced. Dye wood, cinchona bark, kapok and vegetable ivory are other forest products.

TOPOGRAPHY AND CLIMATE. Two high and parallel ranges of the Andes, traversing Ecuador from north to south, are topped by tall volcanic peaks including Chimborazo (20,702 feet) and Cotopaxi (19,498). The region between the mountains and the coast is rich but extremely hot and swampy; beyond the mountains to the east is the rainy, forested and tropical Amazon plain, largely uninhabited.

Though Ecuador, as its name implies, lies on the equator, its climate ranges from tropical and temperate to the Arctic conditions of its snow-capped peaks. Temperatures on the coast average 83°; on the Andean plateau, about 46° to 70°. The rainy season extends from December through April or May.

Egypt (Kingdom)

(Misr)

Area: approximately 383,000 square miles.

Population (est. 1944): 17,620,000 (Egyptian, 95.4%; Arabian, 1.7%; Greek, .6%; others, 2.3%).

Density per square mile: 46.0.

Sovereign: King Farouk I.

Premier: Mahmoud Fahmy el-Nokrashy Pasha.

Principal cities (est. 1944): Cairo, 1,455,400 (capital); Alexandria, 756,000 (chief port); Port Said, 132,000 (Suez Canal terminus); Tanta, 105,000 (railroad center, Nile delta); Mansûra, 79,000 (cotton).

Monetary unit: Egyptian pound (£E).

Language: Arabic.

Religions: Mohammedan, 91%; Christian (mostly Copt and Greek Orthodox), 7%; others, 2%.

HISTORY. Egypt, half again the size of Texas, and the largest and most influential of the Arab states, has been an object of big-power controversy for centuries. In modern times its ambitions for complete

and unfettered independence have been frustrated by the British, who were forced to use Egyptian bases to protect their Suez Canal lifeline. British troops were evacuated from Cairo and Alexandria in 1946, but Anglo-Egyptian negotiations for revision of the 1936 treaty broke down late in 1946 after British refusal to recognize Egyptian sovereignty over Anglo-Egyptian Sudan. Egypt brought the problem before the United Nations Security Council in 1947.

Egyptian history dates back to about 4000 B.C., when the kingdoms of upper and lower Egypt, already highly civilized, were united. Egypt's "Golden Age" coincided with the 18th and 19th dynasties (16th to 13th centuries B.C.), during which the empire was established. Persia conquered Egypt in 525 B.C.; Alexander the Great subdued it in 332 B.C., and then the dynasty of the Ptolemies ruled the land until 30 B.C., when Cleopatra, last of the line, committed suicide and Egypt became a Roman province. From 641 to 1517 the Arab caliphs ruled Egypt, and then the Turks took it and made it part of their Ottoman Empire. Napoleon's armies occupied the country from 1798 to 1801. In 1805, Mohammed Ali, leader of a band of Albanian soldiers, became Pasha of Egypt, founding the present line of rulers. After completion of the Suez Canal in 1869, the French and British took increasing interest in Egyptian affairs.

British troops occupied Egypt in 1882, and British resident agents became its actual administrators, though it remained under nominal Turkish sovereignty. On Dec. 18, 1914, this fiction was ended and Egypt became a British protectorate.

Pressure by Egyptian nationalists forced Britain to declare Egypt an independent, sovereign state on Feb. 28, 1922, although the British reserved rights for the protection of the Suez Canal and the defense of Egypt. On Aug. 26, 1936, by an Anglo-Egyptian treaty of alliance, all British troops and officials were to be withdrawn, except from the Suez Canal zone. When World War II started, Egypt remained neutral. But it early became a strategic base for allied forces, both because of its key location for countering German offenses in North Africa and because of the vital importance of the Suez Canal. British imperial troops finally ended the Nazi threat to Suez in 1942 in a decisive battle at El Alamein, west of Alexandria.

In March, 1942, the Wafd (Nationalist) party won the elections and controlled the government until its cabinet was dismissed by the king in October, 1944. Ahmed Maher Pasha, leader of the Saadist party (an offshoot of the Wafdists), formed a coalition cabinet of all parties except the Wafd. He was assassinated on Feb. 24, 1945, while reading a declaration of

war against the Axis. Mahmoud Fahmy el-Nokrashy Pasha, the Saadist foreign minister, succeeded him. He gave way to Ismail Sidky Pasha on Feb. 15, 1946, but returned to power with a Saadist-Liberal cabinet on Dec. 10, 1946.

Egypt's ruler, King Farouk I, born Feb. 11, 1920, succeeded his father, Fuad I, on April 28, 1936. He was married on Jan. 20, 1938, to Farida Zulfikar, granddaughter of a former prime minister. Their children are Princess Ferial, born in 1938; Princess Fawzieh, 1940, and Princess Fadia, 1943. Since succession is limited to the male line, the heir presumptive is Prince Mohammed Ali, born in 1875, a first cousin to the king.

GOVERNMENT AND DEFENSE. Egypt is a constitutional hereditary monarchy. The bicameral Parliament has a Senate of 147 members, two-fifths of whom are appointed by the king and the rest popularly elected for 10 years (half renewable every five years); and a Chamber of Deputies of 264 members popularly elected by universal male suffrage for five years unless sooner dissolved by the king. The king acts through a cabinet appointed by him but responsible to Parliament.

Elections for the Chamber of Deputies held Jan. 10, 1945 (boycotted by the Wafd party) gave the Saadists 125 seats, Liberals 74, Wafdist Bloc (dissident Wafdist group) 29, National Party 7 and Independents 29.

The judicial system comprises religious, national and consular courts. Criminal jurisdiction of the consular courts was abolished by the Convention of Montreux (October 15, 1937), but mixed courts, composed of Egyptian and foreign judges, will continue to judge civil cases involving foreigners until October 14, 1949.

Under the Anglo-Egyptian Treaty of 1936 the peacetime strength of British troops in the Suez Canal zone is set at 10,000, with 400 air force personnel, but no limit is set in time of war or international emergency. Military service for Egyptians is compulsory. The Egyptian army, strengthened and modernized during World War II, has about 160,000 men, including police units under military control. The air force has about 150 combat planes, and the navy has several small vessels.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory between the ages of 7 and 12. In 1943 there were 7,415 elementary and secondary schools with attendance of 1,358,453. The University Mosque of el-Azhar in Cairo (founded A.D. 972) is the chief theological seminary of the Moslem world. The University of Fuad I in Cairo (founded 1908) had 9,109 students in 1943 while the University of Farouk I in Alexandria (founded 1943) had 2,071 students.

The majority of the people are Sunni

Moslems. The Christians are mainly Copts with an admixture of Armenian, Syrian and Maronite sects. The population divides generally into fellahin (peasantry) and townspeople of the same blood, the Bedouin or nomad Arabs of the desert, and the Berbers, who occupy the Nile valley between Aswan and Dongola. The foreigners are chiefly Greeks (whose main center is Alexandria), French, British and Italians.

Egypt has one of the highest birth rates in the world (38.1 per 1,000 population in 1942) and one of the highest death rates. The density of the population in the small inhabited area in the Nile valley and delta is far greater than that of Belgium or Bengal.

Agriculture is the chief industry, engaging more than half the population. Only about 3.5 percent (3,620,850 acres) of the total area is arable, and only about 5,350,000 acres are actually under cultivation, almost entirely in the Nile valley and delta. Irrigation is indispensable to agriculture; the Aswan reservoir above the first cataract of the Nile holds up to 5,500,000,000 cubic meters of water and that of Gebel Aulia, in the Anglo-Egyptian Sudan, 2,000,000,000 cubic meters. In the delta and in middle Egypt, where perennial or canal irrigation is possible, two or three crops a year can be grown. The chief cash crop is cotton, of which Egypt is a leading producer. Other crops include fruit, vegetables, dates and grapes. The pastoral industry is relatively unimportant except to the Bedouins in the eastern desert. Buffalo are used to turn water wheels for irrigation.

MAJOR AGRICULTURAL CROPS, 1945

Crop	Acres	Tons
Maize	2,018,053	1,861,895
Wheat	1,774,550	1,300,365
Barley	372,000	287,760
Rice	664,320	917,300
Sugar cane		
(sugar content)	99,648	183,755
Cotton (ginned)	1,019,316	263,250

Industry includes sugar refining, cotton ginning, cement manufacture, milling and pottery, soap and perfume making. The French-controlled Sugar Company of Egypt holds a monopoly on sugar refining.

Imports in 1945 were \$247,000,000, with Britain the biggest supplier. Exports came to \$187,000,000, with Britain the largest customer. Major exports were cotton and other textiles, vegetable products, food, beverages and tobacco products.

Navigable throughout its course in Egypt, the Nile is used largely as a means of cheap transport for heavy goods. The principal port is Alexandria. Railway mileage in 1943 totaled 4,899. Branch lines link Cairo and Alexandria with Suez and nearly every town in the delta. Highway mileage

is 5,890. Cairo is a major international airport.

The 1945-46 state budget estimate was \$372,330,000, excluding expenditure of about \$257,000,000 for a five-year public works plan, hydroelectric development and a cotton purchase program. The public debt on Jan. 31, 1945, was \$380,870,000, and the foreign assets reserve on June 30, 1946, was \$620,700,000. A member of the sterling bloc, Egypt had a sterling balance on June 30, 1945, of £350,000,000.

The most important minerals are manganese ore and oil (1946: 9,406,041 barrels). Phosphate rock, gold, iron ochres, nickel, sodium carbonate, sulfate talc and tungsten also are mined.

Egypt has no forests. The total value of fishery products in 1944 was £1,772,000, representing a catch of 22,800 short tons. The chief fishing ground is Lake Menzala in the delta, but fish are also caught along the coast of the delta and in the Nile.

TOPOGRAPHY AND CLIMATE. Egypt, at the northeast corner of Africa, is a very rough square, with the historic Nile flowing northward through its eastern third. On either side of the Nile valley are desert plateaus, spotted with fertile oases. In the north, toward the Mediterranean, these plateaus are low, while south of Cairo they rise to a maximum of 1,015 feet above sea level. At the head of the Red Sea, off the northeast corner of Egypt, is the triangular Sinai peninsula, lying between the Suez Canal and Palestine.

The Nile delta starts 100 miles south of the Mediterranean and fans out to a sea front of 155 miles between Alexandria and Port Said. From Cairo north, the Nile branches into many streams, the principal of which are the Damietta and the Rosetta, joined by a network of canals.

Except for a narrow belt on the Mediterranean, Egypt lies in an almost rainless area, in which high daytime temperatures fall quickly at night. The mean temperature at Cairo varies between 53° in January and 84° in July; at Alexandria, between 57° in January and 81° in July. South of Cairo, pure desert conditions prevail; at Aswan the mean maximum temperature is 118°.

SUEZ CANAL. The Suez Canal, in Egyptian territory between the Arabian Desert and the Sinai peninsula, is an artificial waterway about 100 miles long between Port Said on the Mediterranean and Suez on the Red Sea. Construction work, directed by the French engineer Ferdinand de Lesseps, was begun April 25, 1859, and the canal was opened Nov. 17, 1869. The cost was 432,807,382 francs. The concession is held by a French company, *Compagnie Universelle du Canal Maritime de Suez*, in which the British government holds 295,026 out of a total of 652,932 shares. The

concession expires Nov. 17, 1968, when it will revert to the Egyptian government. On the board of management are one Dutch, 2 Egyptian, 19 French and 10 British directors. In the last normal pre-war year (1938), 6,127 vessels with a net tonnage of 34,249,745 passed through the canal; toll receipts were 1,784,278,091 francs. In 1945, 4,206 vessels with a tonnage of 25,064,966 passed through the canal; toll receipts were £9,911,500.

ANGLO-EGYPTIAN SUDAN—Status: Anglo-Egyptian condominium.

Area: 967,500 square miles.
Population (1942): 6,590,996.
Capital: Khartoum (pop. 1944: 46,311).
Governor general: Sir Robert Howe.
Foreign trade (first half, 1946): imports, £5,787,000; exports, £5,118,000.
Agricultural products: cottonseed, ginned cotton, millet, sesame, wheat, groundnuts.
Minerals: gold, salt.
Forest product: gum arabic.

About one-fourth the size of Europe, Anglo-Egyptian Sudan extends from north to south about 1,200 miles and west to east about 1,000 miles. Before the revolt against Egyptian rule by the Arabized tribes under Mohammed Ahmed (the Mahdi) in 1882–84, the region was known as Egyptian Sudan. Since its reconquest by the Anglo-Egyptian expeditions of 1896–98, it has been known by its present name. A governor general, appointed by the king of Egypt on British recommendation, is assisted by a council of 6 to 8 members.

During the 1946 treaty negotiations, Egypt demanded union of the area with the Egyptian crown, but important Sudanese groups favored complete independence. The aim of the British administration in Sudan was described as the establishment of self-government as a first step toward eventual independence.

The northern region is a continuation of the Libyan Desert. The southern region is fertile, abundantly watered and, in places, heavily forested. It is traversed from north to south by the Nile, all of whose great tributaries are partly or entirely within its borders. The highest elevation is a mountain range parallel to the Red Sea, with heights of 4,000 to over 7,000 feet. The Sudanese tribes, both Arabs and Negroes are, as a general rule, indolent. Sudan is the chief source of gum arabic; the southern forests also are rich in fibers and tannins.

There are two trunk railways, one connecting Sudan with Egypt and the other affording access to the chief port, Port Sudan, on the Red Sea.

The whole country lies within the tropics and has an exceedingly hot climate—greatest in the central area and least in the

desert zone, where the temperature range is large. At Khartoum the mean annual temperature is 80°, with January the coldest and June the hottest month.

Eire (Republic)

Area: 26,601 square miles (not including larger water bodies).

Population (census 1946): 2,953,452 (almost entirely Irish).

Density per square mile: 111.0.

President: Séan T. O'Kelly.

Prime Minister: Éamon de Valera.

Principal cities: Dublin (Baile Atha Cliath) (est. 1945) 502,600 (capital); (est. 1943): Cork, 75,484 (seaport); Kingstown (Dun Laoghaire), 42,105 (seaport); Limerick (Luimneach), 42,070 (seaport).

Monetary unit: Irish pound.

Languages: Gaelic, English.

Religions (1936): Roman Catholic, 93.4%; Protestant Episcopal, 4.8%; Presbyterian, 1%; others, .8%.

HISTORY. Eire—formerly the Irish Free State—is an agrarian state that occupies five-sixths of the island of Ireland west of England, across the Irish Sea. It is one-tenth the size of Texas but has four times as many head of livestock per acre. It is a moist, mild land of lovely lakes, no snakes and rich greenery, and is the country of origin of several million Americans. Eire's fiercely independent people are still subject to some of the tensions tracing back to their revolt against British rule in 1919–21.

About the beginning of the Christian era, Ireland was divided into five kingdoms—Ulster, North Leinster, South Leinster, Munster and Connaught—each with its own ruler, but each subject to the overlord of all Ireland who dwelt at Tara. St. Patrick introduced Christianity in A.D. 432 and became the country's patron saint.

Norse depredations along the coasts, starting in 795, ended in 1014 with Norse defeat at the Battle of Clontarf by forces under Brian. In the middle of the 12th century, the Pope gave all Ireland to the English crown as a papal fief. In 1171 Henry II of England was acknowledged "Lord of Ireland," but native sectional rule continued for centuries, and English control over the whole island was not reasonably absolute until the 17th century. By the Act of Union (1800), England and Ireland became politically united in the "United Kingdom of Great Britain and Ireland."

The great potato famine of 1846–48 took many lives and drove millions to emigrate to America.

Several home-rule bills were introduced in the English Parliament in the 19th century, but failed of passage. One was finally approved in 1914, but enforcement

was suspended by the outbreak of World War I. During the war, agitation for freedom was carried on by the nationalist party—Sinn Féin (Ourselves). In 1916 the British quickly suppressed the famous Easter Week rebellion and executed its leaders.

After the 1918 elections, seventy-three of the Sinn Féiners elected to the English Parliament met in Dublin, proclaimed themselves an Irish Parliament, and passed a declaration of independence. The result was war between Irish nationalists and British troops from January, 1919, to May, 1921. A treaty ratified in December, 1921, gave Ireland political status equal to that of Canada. Six Ulster counties, largely Protestant, formed a separate government as Northern Ireland, closely bound to England; the other twenty-six became the Irish Free State. Republican extremists, headed by Eamon de Valera, refused for several years to recognize the treaty.

William Cosgrave, leader of the Sinn Féin's right wing, was president from 1922 to 1932. In the latter year, De Valera's party, Fianna Fáil, won control of the government. Under De Valera's leadership a new constitution was adopted in 1937 making the nation, in effect, a republic with a president replacing the British governor general. The country's former name of "Eire" was restored by the constitution.

The first president of Eire was Dr. Douglas Hyde, with De Valera as prime minister. Throughout World War II, Eire maintained strict neutrality. In the elections of June, 1945, the government candidate, Séan T. O'Kelly, defeated General Séan McKeon and Dr. Patrick McCartan for the presidency.

GOVERNMENT AND DEFENSE. Eire is a sovereign, independent, democratic state. The oath of allegiance to England's king was abolished in 1933, and in 1945 De Valera described Eire as a republic linked with the British Commonwealth only by the External Relations Act of 1936. The president, directly elected for seven years, names the prime minister on the nomination of the chamber of deputies. Parliament (Oireachtas) has two houses. The chamber of deputies (Dáil Eireann) has 138 members elected by proportional representation for a five-year term. The senate (Seanad Eireann) has 60 members, of whom 11 are named by the prime minister, 6 by the universities, and 43 from vocational panels.

Party representation in Dáil Eireann (elections of May 30, 1944) is as follows: Fianna Fáil 78, Fine Gael 28, Farmer 12, other parties 20.

Military service is voluntary. The army had 11,397 men in 1947, and the air force 62 combat planes. In 1938 Britain gave up its last defense posts in Eire, including

those at Cobh, Berehaven and Lough Swilly.

SOCIAL AND ECONOMIC CONDITIONS. Elementary education is free and is provided in state schools; secondary education is under private control, notably the religious orders. Technical and agricultural education is under local control, aided by state subsidies. The 5,032 elementary schools in 1943-44 had 464,738 students; 377 secondary schools had 40,040 students. University education is available at the University of Dublin (Trinity College) founded in 1591, with a 1945-46 enrollment of 1,484, and at the National University of Ireland (constituent colleges at Cork, Galway and Dublin), with 4,896.

The majority of the people are English-speaking, although the government has attempted to promote the traditional Gaelic language, which is an essential part of the curriculum for all state schools.

Eire is predominantly an agricultural country, with about 70 percent of the total land area (17,000,000 acres) devoted to crops and pasture. The pastoral industry is the basis of the nation's economy, but recent years have brought a greater diversity in agriculture, marked by large increases in sugar beet and wheat production. Principal crops in 1945 (in U. S. bushels) were wheat 21,394,000, rye 283,000, barley 6,995,000, oats 50,803,000; (in short tons) potatoes 3,343,000, beet sugar 824,000, flax 6,000. Other staple crops are turnips, cabbage, flax and hay. Livestock in 1946 included 4,139,000 cattle, 272,600 sheep and 477,000 hogs. Wool output in 1944 was 7,929 short tons, and butter output in 1946 was 30,868 tons.

The government's self-sufficiency policy, plus financial and tariff inducements, have promoted considerable industrial development since 1928. The leading manufactures, in order of value, are ordinarily beverages, tobacco, wood, paper, clothing, textiles and metals. The hydroelectric plant erected on the Shannon River in County Limerick provides cheap electricity and power for homes and factories.

Exports in 1946 totaled £38,361,000 (1945: £35,236,622), of which 74.2 percent went to Britain; imports were valued at £71,833,912, of which 49.9 percent came from Britain. The major export is cattle; others are bacon, beer, butter, horses, eggs and textiles. The major imports are textiles, coal, wheat, iron, steel, corn, tea, petroleum, clothing and tobacco.

The merchant marine in 1944 had 466 vessels with a net tonnage of 44,650. Almost all transport facilities are nationalized. Railway mileage in 1944 was about 2,500. Main roads in 1945 totaled 9,798 miles, and secondary roads 39,191 miles. Shannon is rapidly developing into a key international airport.

The monetary unit is the Irish pound, which has the same value as the British pound sterling. Eire is part of the sterling bloc; sterling balances outstanding to her on June 30, 1945, amounted to £170,000,000.

Government expenditures for 1947-48 were estimated at £61,119,000, and revenue at £61,131,000. The public debt on March 31, 1945, was £79,541,000, and the gold reserve on June 30, 1946, was £2,600,000.

In 1944 Eire mined 226,600 short tons of coal, some gypsum, and considerable peat from its bogs, but otherwise the mineral resources are negligible, as are those of the forests. In 1946, 1,200,000 tons of coal were imported from Britain. The fishing industry employs about 10,000 men. The 1944 catch, including mackerel, herring, whiting, cod, plaice and shellfish, was valued at \$2,356,000.

TOPOGRAPHY AND CLIMATE. Occupying the entire island except for the six northern counties of Ulster, Eire resembles a basin—a central plain rimmed with mountains, except in the Dublin region. The mountains are low, with the highest peak, Carrantuohill in Kerry County, rising 3,415 feet. Eire's principal river is the Shannon, which begins in the north central area, flows south and southwest for about 240 miles and empties into the Atlantic. About 20 percent of the country is covered by bogs. Among Eire's many lakes are the famous Lakes of Killarney in the southwest county of Kerry.

Eire's moist and mild climate, with annual rainfall running between thirty and forty inches fairly evenly distributed throughout the year, is influenced by the Gulf Stream, which makes the winters warmer than in other places in the same latitude. The mean temperature at Dublin is 41.7° in January and 60.5° in July.

Ethiopia (Kingdom)

(Abyssinia)

Area: 350,000 square miles.

Population (est. 1939): 9,500,000 (Abyssinian, 20%; Galla, 50%; others, 30%).

Density per square mile: 27.

Ruler: Emperor Haile Selassie I.

Prime Minister: Bitwoded Makonnen Endalkatchau.

Principal cities (est. 1939): Addis Ababa, 150,000 (capital); Dire Dawa, 30,000; Harar, 25,000.

Monetary unit: Ethiopian paper dollar.

Languages: Amharic, Arabic.

Religions: Copt (Christian), Mohammedan.

HISTORY. Ethiopia, a land-locked African kingdom more than twice the size of California, was one of the first victims of the Axis aggression that culminated in World

War II. Italy, after creating fake border incidents, invaded the country on Oct. 3, 1935, and Addis Ababa fell on May 5, 1936. Haile Selassie, the emperor, fled the country, and the Italians welded Ethiopia, Italian Somaliland and Eritrea into the colony of Italian East Africa.

World War II brought early liberation; Ethiopia, in fact, was the first of the axis-occupied nations to be retaken by the Allies. British and Ethiopian troops reconquered the country in 1941, with the final Italian surrender occurring on Nov. 27. During a transition period thereafter, the nation was under dual Anglo-Ethiopian control. Under an agreement signed on Jan. 31, 1942, British troops quit the country except for stipulated border areas, but a good deal of British supervision continued for several years thereafter.

With the end of World War II, this supervision ceased, and the country launched a modernization program in agriculture, industry and education. Irredentist claims to the ex-Italian colonies and former Ethiopian provinces, Eritrea and Somaliland, began to be voiced in 1946.

The Ethiopian royal family claims descent from the Queen of Sheba and from Menelek, a son of King Solomon. Christianity was introduced about A.D. 330, and after the Arab conquest of northern Africa in the 7th century, Ethiopia was more or less cut off from the outside world for a thousand years. When Theodore III proclaimed himself emperor in 1853, the country was a conglomeration of autonomous provinces under hereditary chiefs who were usually at war with one another. Menelek II, who ascended the throne in 1889, brought Ethiopia under single rule, and his forces finished off a five-year Italian attempt at invasion with a great massacre at Aduwa on March 1, 1896. Revenge for this massacre was one of Mussolini's great war cries in the 1935-36 invasion.

GOVERNMENT. Ethiopia's ruler, Haile Selassie I, was born on July 17, 1891, crowned king on Oct. 7, 1928, and became emperor on Nov. 2, 1930. His son, the crown prince and heir apparent, is Asfa Wassan, born on July 27, 1916. The emperor directly controls the government, though there now is a Council of Ministers, a Senate and a Chamber of Deputies. All members are appointed by the monarch, however. In wartime, military service is compulsory. The small Ethiopian standing army is being equipped and trained by a British military mission.

SOCIAL AND ECONOMIC CONDITIONS. The education system is extremely backward. Foreign missions or the government maintain schools in the principal towns, and several secondary schools recently have been set up. The Coptic Church (Christian), with its numerous priests, exercises

a powerful position and owns much Ethiopian land. It became independent of the Coptic Archbishop of Alexandria in 1946. Moslems, numerous in frontier regions, have their religious center at Harar. The towns of Ethiopia are scattered and crudely built.

Ethiopia is generally fertile, predominantly agricultural and pastoral, with many regions yielding two crops a year. The chief crops are maize, wheat, barley, rye, cotton, sugar cane, millet, hemp, vegetables, coffee and teff (the common bread grain). The country's inadequate transport system, however, makes crop growing largely a local industry.

The country grazes several million cattle, and many goats and sheep. Horses and mules are bred extensively as pack animals and mounts. More than 5,000 tons of hides valued at \$6,471,238 were exported during the trade year 1945-46. Exports of sheep and goat skins had a value of \$2,029,313 and \$1,853,059 respectively. There is little manufacturing except for small native industry, although the Italians built some industrial plants during their five-year occupation.

Ethiopia is primarily an importer of consumer's goods and an exporter of raw or semiprocessed materials. For the trade year ended Sept. 10, 1946, exports were valued at U. S. \$29,857,762 (1945: \$14,090,215) and imports at \$21,782,375 (1945: \$15,439,916). The leading exports, aside from bullion and currency, were coffee, cereals, pulse, hides, wheat, flour and sheep skins.

The 486-mile track from Addis Ababa to Djibouti in French Somaliland is Ethiopia's only rail outlet and its principal trade route. Motorable roads, non-existent until about 1925, now include about 1,000 miles built by the government, and 4,340 miles built during the Italian occupation. The long rainy season makes road maintenance difficult, and air traffic has become increasingly important, especially as a means of communication with foreign commercial centers.

Government expenditures in 1943-44 were \$12,622,343, while all revenues totaled about \$11,462,850.

Gold, produced from placer mines worked by natives in the south and west, is Ethiopia's main mineral. Platinum also is mined in fair commercial quantities. Other minerals are rock salt, cinnabar, copper, iron, mercury, mica, potash and sulfur. Oil is believed to exist under Ethiopia's surface, and in 1945 all oil rights were sold to the Sinclair Refining Company of the United States.

Vegetation is dense in the valleys and lowlands, but the plateau is comparatively bare, especially in the north. The forests contain many valuable trees, including the Natal yellow pine.

TOPOGRAPHY AND CLIMATE. Over its main plateau-land, Ethiopia has several high mountains; Dashan, the tallest peak, towers to 14,760 feet northeast of Lake Tana. Most of the many rivers are rapid, not navigable, and flow into the Nile. The Blue Nile, or Abbai, rises in the northwest and flows in a great semicircle east, south and northwest before entering Sudan. Its chief reservoir, Lake Tana, lies in the northwestern part of the plateau.

Ethiopia, lying wholly within the tropics, escapes a torrid climate because of its elevation, although the lowlands are hot. The mean annual range of temperature is between 60° and 80°, although Alpine conditions prevail in the higher mountains. The dry season lasts generally from October to June, the wet season from June to September.

Finland (Republic)

(Suomen Tasavalta)

Area: 130,160 square miles.

Population (est. 1945): 3,947,702 (Finnish, 88.7%; Swedish, 11%; others [Russian, German, Lapponic], .3%).

Density per square mile: 30.3.

President: Juho K. Paasikivi.

Prime Minister: Mauno Pekkala.

Principal cities (est. 1945): Helsinki, 331,192 (capital); (est. 1939): Tampere, 76,730 (textiles, paper); Turku (Abo), 74,351 (seaport, shipbuilding); Vaasa, 32,695 (seaport).

Monetary unit: Markka (FM).

Languages: Finnish, Swedish.

Religions (1937): Evangelical Lutheran, 97%; Greek Orthodox, 1.7%; Roman Catholic, .02%; others, 1.28%.

HISTORY. Finland is a nation of forests, lakes and fisheries and, most recently, of misfortune in unwanted war. In Nov., 1939, the Russians attacked Finland to enforce territorial demands. Although the sturdy Finns stood off large-scale Red Army assaults for 105 days, they finally lost and ceded to Russia 10 percent of the nation's area, including the Karelian isthmus. Under German pressure and somewhat in a spirit of revenge, the Finns joined the Nazis against Russia in 1941—and lost again. This time Russia took Finland's ice-free Arctic port of Petsamo, nearby nickel mines, and levied a \$300,000,000 indemnity to be paid in goods.

The Finns, a distinctive people of possibly Mongolian origin, first settled their Montana-sized area about A.D. 100. King Eric IX of Sweden conquered them about 1155 and introduced Christianity. Under Swedish rule, which lasted for 650 years, the Finns retained considerable autonomy and were given their own parliament in the 17th century.

Political pressure growing out of the Napoleonic Wars forced Sweden in 1809 to cede Finland to Russia, which gave the Finns a constitution and set them up as a grand duchy. Out of the chaos and complexities of World War I, the Russian revolution of 1917 and a Finnish civil war in 1918 between "Reds" and "Whites" led by Baron Carl G. Mannerheim, Finland emerged as a republic in 1919. A year later Russia ceded to Finland the Petsamo area which it reclaimed in 1944.

For the next twenty years Finland was generally orderly and prosperous except for vigorous suppression of Communists and a bloodless rightist uprising in 1932. The national presidents were K. J. Stahlberg, 1919-25; Lauri Relander, 1925-31; P. E. Svinhufvud, 1931-37; K. Kallio, 1937-40; Risto Ryti, 1940-44; Carl G. Mannerheim, 1944-46 and Juho K. Paasikivi thereafter.

Ryti and Premier Edwin Linkomies, pro-Germans, were forced to resign on Aug. 1, 1944, and were replaced by Mannerheim (who had led Finnish forces in both wars with the U. S. S. R.) and Antti Hackzell, respectively. Finland severed relations with Germany on Sept. 2, signed an armistice and concluded a provisional peace treaty with Britain and Russia on Sept. 19. The United States had not declared war on Finland.

Pro-Russian Juho K. Paasikivi became premier on Nov. 11, 1944, and when Mannerheim resigned because of illness on March 4, 1946, Paasikivi was elected by the Diet to fill the unexpired presidential term. The premiership went to Mauno Pekkala, leader of the new Socialist Unity Party, made up of dissident and left-wing groups advocating cooperation with Communists in a popular democratic bloc.

Since then the Finns, burdened by the heavy reparations load, have made good progress in rehabilitating their war-torn areas and industrial plants. Politically they have steered a cautious but realistic course acceptable to the Soviet Union, in whose orbit the country now must turn. Political liberty has been preserved to a surprising extent despite widely differing factions ranging from extreme left to far right.

GOVERNMENT. Under the 1919 constitution, the 200 Diet members are popularly elected by a proportional representation system for three-year terms. The president, normally chosen for six years by an electoral college of 300 members nominated by the people, acts through his Cabinet headed by the prime minister. Suffrage is universal. Because of the many political parties, government usually is carried on by a coalition, with frequent cabinet changes.

Party standing in the parliamentary elections held in March, 1945, was as follows: Democratic Union (Communists and So-

cialist Unity) 50 seats, Social Democrats 49, Agrarian 49, Conservatives 28, Swedish People's 14, others 10.

PEACE TREATY OF 1947. The final peace treaty signed in Paris on Feb. 10, 1947, confirmed the de facto cession to the U. S. S. R. of the Petsamo area, Viipuri and the Karelian region and also of the Porkkala-Udd area west of Helsinki for use as a Soviet naval base. Finland is to pay reparations of \$300,000,000 in kind over a period of eight years from Sept. 19, 1944, and is to make two-thirds compensation to United Nations nationals for wartime property loss.

The treaty limits Finnish defense forces to the following strengths: army, 34,400 personnel; navy, 4,500 personnel and a tonnage of 10,000; and air force, 3,000 personnel and 60 aircraft. The possession of bombers, submarines, atomic weapons and motor torpedo boats is prohibited.

SOCIAL AND ECONOMIC CONDITIONS. Illiteracy is very low (.9% beyond the age of 15). Education is compulsory from 7 to 15. In 1944 there were some 10,700 elementary schools with 326,000 students. In 1945 there were 78 middle schools with 20,700 students, and 163 lyceums with 57,500 students. There were three regular universities, of which Helsinki has the largest enrollment (8,348 in 1945).

About 60 percent of the total population is engaged in agriculture, 17 percent in mining and industry, 3.8 percent in transport, 4.3 percent in commerce, 2 percent in professions and 11 percent in miscellaneous occupations. Considerable progress has been made in social legislation, including workmen's compensation. The cooperative movement is extensive. By a 1927 law, expropriation of large estates was carried out, with compensation to their owners.

Only about 3 percent of the land is under cultivation, and about 5 percent in grass-land. The chief crops (with 1944 production in tons) are oats 346,000, rye 167,000, barley 150,000 and potatoes 640,000. Grazing lands are extensive. Livestock in 1941 included 1,590,000 cattle, 725,000 sheep and 260,000 hogs. In 1946, the yield of cereals was 468,000 metric tons and potatoes 935,000 metric tons.

Before World War II there were 4,422 larger manufacturing establishments with 214,387 workers and an output valued at \$454,955,590. The leading manufactures were wood and paper (about one third the total value), food, luxury items, machinery and textiles. Following the cession of the Karelian isthmus and the city of Viipuri to the U. S. S. R., there remained 3,896 plants whose industrial production was valued at about \$398,000,000.

Finnish exports in 1946 were valued at 23,051,000,000 FM and imports at 24,286,000,000 FM. Principal suppliers by percent-

age, were the U. S. 19.3, Britain 18.1, U.S.S.R. 13.7, and Denmark 10.1. Chief customers were Britain 24.9, U.S.S.R. 20.0, Denmark 11.0 and Sweden 7.2. Leading exports were wood and wood manufactures 42.2, cardboard and paper 29.9, wood pulp 18.5 and textiles 2.8.

The merchant marine in 1946 totaled 513 vessels of 290,445 gross tons. The numerous lakes, many of them joined by canals, are busy transport routes. About 40,000 vessels and 18,000 timber rafts use the canals annually. There were approximately 20,000 miles of highway in 1944 and 17,000 miles of secondary roads. Railway mileage in 1941 totaled approximately 3,000, almost entirely nationalized.

Revenue in 1947 was estimated at 62,-558,000 FM (1946: 55,529,000,000 FM) and expenditures at 62,532,000,000 FM (1946: 55,526,000,000 FM). The consolidated debt in 1946 was 99,436,000,000 FM as compared to 4,074,200,000 FM in Sept., 1939. A U. S. credit of \$35,000,000 was allowed in 1946 by the Export-Import Bank.

Finland has no coal or oil, and many of its ore deposits are remote from transportation. Finland's sulfide ore, with yearly production of about 300,000 tons, is 4 percent copper, 26 percent sulfur and 27 percent iron, with some zinc, cobalt, gold and silver. Limestone, soapstone and red granite deposits are extensive. Wood and peat are the only natural fuels.

More than a third of Finland is covered with high quality timber, the nation's richest natural resource. The value of lumber, pulp and paper exports in 1946 was 10,700,000,000 FM. Sawed timber production totaled 650,000 standards, cellulose 739,000 metric tons and paper 407,000 metric tons.

Fins have fished for centuries, not commercially, but for domestic consumption. The 1938 catch was 24,647 tons, 60 percent Baltic herring.

TOPOGRAPHY AND CLIMATE. Finland stretches 700 miles from the Gulf of Finland on the south to Soviet Petsamo, north of the Arctic Circle. Off the southwest coast are the Aland Islands (approximately 300), controlling the entrance to the Gulf of Bothnia. Finland has more than 60,000 lakes. Of the 1939 area, 11 percent was lake and 48 percent swampland. Of the few rivers, only the Oulu (Uleå) is navigable to any important extent. Most of the country is tableland 400 to 600 feet above sea level, with a rise to 4,115 feet in the Hailtjokko region of the northwest.

Finland's long severe winters are moderated somewhat along the coast by prevailing southwest winds, but the summer lasts only about two and a half months. Southern Finnish ports are icebound part of the year. Rainfall is light, with the driest months from May to September.

France (Republic)

(République Française)

Area: 212,741 square miles.

Population (census 1946): 40,517,923 (French 94.2%; others, 5.8%).

Density per square mile: 190.4.

President: Vincent Auriol.

Premier: Paul Ramadier.

Principal cities (census 1946): Paris, 2,725,374 (capital); Marseille, 636,264 (chief port); Lyon, 460,748 (silk, metal manufacture); Toulouse, 264,411 (tobacco; commercial center); Bordeaux, 253,751 (seaport; wine); Nice, 211,165 (resort center); Nantes, 200,265 (manufacturing).

Monetary unit: Franc.

Religion (est.): Roman Catholic, 97.5%; Protestant and others, 2.5%.

HISTORY. One of the world's great nations in culture, art and learning, France was bled and devastated in World Wars I and II and emerged in mid-1944 after more than four years of Nazi occupation as a shattered nation. Since then the country has been beset by political instability centering around the three parties of Communists, Socialists and Popular Republicans. Nevertheless, a new constitution was finally adopted by a narrow majority in 1946, and substantial economic progress has been made, although inflation still is rampant and the financial situation is serious. Internationally, France has persevered in its traditional repressive policy towards Germany and has resumed its place in world councils.

France was ancient Gaul when Julius Caesar conquered a part of it in 57-52 B.C.; for several centuries thereafter it was bound to the Roman Empire. In the 5th century A.D., it was overrun by the Franks and other Barbarian tribes. Between 768 and 814, Charlemagne created a Frankish empire covering most of Western Europe, but by the time Hugh Capet came to the throne in 987, his kingdom comprised only the region around Paris. For more than 300 years the Capets struggled to unify the many feudal fiefs.

Philip VI, cousin of the last Capet and first of the House of Valois, took the throne in 1328. Soon thereafter began the Hundred Years' War (1338-1453), the struggle over England's bid to seize the French crown. The English won at Crécy in 1346 and at Agincourt in 1415, but were defeated at Orléans in 1429 by the French forces led by Joan of Arc. Cruel persecution of French Protestants, the Huguenots, was followed by civil war and then the Edict of Nantes in 1598, by which the Huguenots received complete religious freedom from Henry IV, first of the Bourbons.

Splendor, wealth and the establishment of a colonial empire marked the long reign of Louis XIV from 1643 to 1715. Extravagance, however, forced Louis XVI to strug-

gle with the problem of taxation at a time when the forces of revolution were boiling to a head among France's lower and intellectual classes. The French Revolution, of world significance for its impact on absolute rule, broke out in 1789. Louis XVI was deposed in 1792 and executed the next year. Then came the Reign of Terror as the revolution swung to excess, the Directory from 1795 to 1799, and the Consulate from 1799 to 1804, after which Napoleon was proclaimed emperor. Meanwhile, French armies were engaged on all sides, spreading French hegemony over most of western and central Europe. The final downfall came at Waterloo on June 18, 1815.

The restored Bourbon, Louis XVIII, reigned until 1824 and was succeeded by his reactionary brother, Charles X, who was overthrown in the revolution of 1830. His successor, Louis Philippe, was unseated in 1848, and succeeded by Napoleon's nephew, Louis. Inaugurated president of the Second Republic in 1848, Louis Napoleon became emperor as Napoleon III in 1852 but abdicated after France's defeat in the Franco-Prussian War of 1870-71. The resultant conflict between republicans and monarchists was resolved by the adoption of a republican constitution in 1875, which established the Third Republic to replace the provisional Republic set up in 1871.

Victorious with the Allies in World War I under Premier Georges Clemenceau, France emerged as the dominant power on the continent. From 1919 on, its aim was to keep Germany weak through a system of military alliances and by maintaining a strong French army.

The effort was a dismal failure. At home France was weakened by economic and political instability, with many short-lived cabinets. Germany became a dictatorship, with the full national energy bent toward war. The Third French Republic, permitting political freedom, bickered and argued away its years. The leftist "Popular Front" coalition cabinets of Léon Blum (1936-37) and Camille Chautemps (1937-38) were succeeded by the Radical and Socialist-Radical cabinet under Edouard Daladier, one of the men of Munich.

Paul Reynaud took Daladier's place on March 21, 1940, less than seven months after the start of World War II. In May, 1940, Hitler's armies finally poured into France and on June 16, the reins of government fell to Marshal Henri Philippe Pétain, who opposed continuation of the war. An armistice with Germany was signed June 22, dividing France into occupied and unoccupied zones. The Third Republic was voted out of existence on July 10 by the National Assembly at Vichy, and Unoccupied France became totalitarian, with Pétain as chief of state.

Meanwhile, in London, General Charles de Gaulle had formed on June 18, 1940, a provisional French National Committee which received British recognition and represented the interests of free Frenchmen. De Gaulle's government-in-exile was moved to Algiers in June, 1943, as the French Committee for National Liberation.

After the liberation of Paris, De Gaulle formed a provisional government in the capital on Sept. 10, 1944. It remained in power as a theoretically non-political régime until the elections of Oct. 21, 1945, when a National Assembly was selected to draw up a new constitution and serve as an interim legislative body. De Gaulle was named provisional president on Nov. 13 but resigned soon after and was succeeded by Félix Gouin, a Socialist, on Jan. 23, 1946. A women's suffrage law was passed on April 26, 1944, and women voted for the first time in France in April, 1945.

A proposed constitution providing for a strong legislature and weak executive was rejected by the electorate on May 5, 1946. The new National Assembly, elected June 2, named Popular Republican Georges Bidault as interim President. France's new constitution was approved by a narrow margin on Oct. 13, and the Fourth Republic formally took shape early in 1947 with the election of Socialist Vincent Auriol as President, Jan. 16, and the confirmation of Socialist Paul Ramadier as Premier, Jan. 22.

GOVERNMENT. Under the constitution approved Oct. 13, 1946, France is a secular, democratic and social republic. The dominant power in the new Republic is the National Assembly, whose members (618 in 1947) are elected by universal direct suffrage. There is also a Council of the Republic of 315 members elected by a complicated indirect procedure requiring 8 different elections. This house has only advisory and delaying powers and is definitely subordinate to the Assembly. The two Houses together elect the President of the Republic for a 7-year term, but his choice of a Premier and the latter's choice of cabinet ministers require Assembly ratification. All ministers are collectively responsible to the Assembly for the general policy of the Cabinet and are individually responsible for their personal actions.

The National Assembly elections of Nov. 10, 1946, resulted in a considerable gain for the Communists; they and their affiliated groups secured 182 seats, the Popular Republicans (MRP) and their affiliated groups, 166; Socialists, 102; others, 168.

The Cabinet, as reconstituted after the exclusion of the Communist ministers on Apr. 30, 1947, contained 12 Socialists, 6 Popular Republicans, 5 members of the *Rassemblement des Gauches*, and 2 Independent Republicans.

DEFENSE. France's 1947 army, riddled by equipment shortages, political factionalism and poor morale, comprised about 430,000 men recruited under a conscription system. Forces outside France included about 60,000 in Germany, 7,000 in Austria, several thousand in Madagascar, 100,000 in North Africa and another 100,000 in Indo-China. The projected strength of the air force was stabilized at 100,000 and that of the navy at about 135,000. The navy, decimated by wartime losses and scuttlings, had 3 battle-ships (one nearing completion, one in commission and one in use as a gunnery training ship), one fleet carrier (formerly H.M.S. *Colossus*, 14,000 tons), one escort carrier, 9 cruisers, 12 submarines (four more being built), 28 destroyers and large torpedo boats, and several hundred smaller craft to equal about 250,000 tons. The budget allocation for defense is 33 percent.

EDUCATION. State elementary schools in 1944 numbered approximately 66,000, with more than 3,600,000 students enrolled. There were also 11,700 private elementary schools with approximately 1,050,000 students. Secondary education for boys—comprising a 7-year course—is provided in *lycées*, classical and modern schools maintained by the state (527 in 1944 with 205,000 students), communal colleges and free schools. Girl students enrolled in *lycées* and classical and modern schools in 1944 numbered 141,000 in 388 institutions.

Higher education is provided chiefly in the universities, of which there are 17 in

France with total enrollment slightly exceeding 100,000 in 1943. The largest, the University of Paris, had an enrollment of 40,200 in that year. Toulouse had the second largest enrollment—8,000.

RELIGION. The predominant faith is Roman Catholicism, but Church and State were separated in 1905. Diplomatic relations with the Vatican were resumed in 1921, and lesser church property was returned to diocesan associations in 1924.

POPULATION. The people are not homogeneous, varying from section to section. During the inter-bellum period, the population remained almost static, with an increase of only 72,133 from 1931 to 1936 and a decrease of 3.3 percent from 1936 to 1946. The birth rate also fell sharply (1925: 19.6; 1936-38 annual average: 14.8), but the end of World War II saw a slight uptrend, with an estimated rate of 16.2 in 1945. In 1946, for the first time in 11 years, births (835,000) exceeded deaths (542,000).

AGRICULTURE. The national economy of France is predominantly agricultural. Of the total area, approximately 40 percent is ordinarily devoted to crops, 20 percent to forests, 3 percent to vines and two percent to market and other gardening. The vast majority of holdings are small farms worked by the owners. France normally is almost self-sufficient in basic foodstuffs and leads the world in wine production.

Production of major crops in 1946, in metric tons (1938 production in parentheses), was as follows: wheat 6,674,000 (9,801,000); rye 438,000 (811,131); barley 1,029,000 (1,290,780); oats 3,734,000 (5,457,438); potatoes 12,167,000 (17,314,529), and sugar beets 6,517,000 (7,894,873).

Other important crops are artichokes, berries, fodder beets, fruits, hay, nuts and turnips. Silk culture once thrived in the lower Rhône valley, but production fell sharply between wars. Milk, butter, cheese, eggs and poultry have become increasingly important as exports. Livestock in 1943 included 14,500,000 cattle, 6,600,000 sheep and 3,700,000 hogs. Wine production in 1946 was 830,080,600 American gallons.

INDUSTRY. Principal industrial areas are Paris, Artois, Lower Seine and Lyon; the textile industry is concentrated in the north. Leading manufactures are iron, steel, chemicals, textiles, automobiles, machinery and beet sugar. Industrial activity made rapid advances in 1946, with production estimated at 89 percent of prewar totals. The coal shortage was still serious, however, and augmented production in 1946-47 was accompanied by disproportionately higher prices and living costs.

TRADE. Imports in 1946 totaled 30,420,787 tons, valued at 234,041,646,000 fr., and exports, 9,987,909 tons, valued at 101,405,649,000 fr., leaving a trade deficit of 132,636,007,000 fr. The principal suppliers were the

U. S. 27.8 percent, Algeria 10.2, Britain 5.8; the leading customers were Belgium 20.3 percent, Algeria 13.2 and Switzerland 9.4.

COMMUNICATIONS. The French merchant marine in 1939 had 11,282 ships and a gross tonnage of 2,952,975. World War II losses amounted to 1,814,000 tons; the deadweight tonnage on March 31, 1946, was 1,300,000. Marseille, the chief port, ordinarily clears more than 25 percent of it.

In 1943 there were 5,435 miles of navigable waterways, including canals with a traffic of 22,900,000 tons (1938: 49,610,000 tons). There are about 550 inland navigation ports, of which Paris, Rouen and Strasbourg each normally handle more than one million tons annually (Paris, more than ten million tons). Railway mileage in 1944 totaled 24,400; destruction by Allied bombing and by military operations after the Normandy landings was enormous. Restoration of railway traffic facilities made good progress in 1946 and 1947, but water traffic, particularly international merchant marine, still lagged, largely because of heavy war damage. Railroads were merged in 1938 into the *Société Nationale des Chemins de Fer Français*, of which the government acquired controlling interest. Highway mileage in 1939 was 393,761.

Air France, nationalized on Jan. 1, 1946, operates on a world-wide basis, using U. S.-built aircraft for the most part. Miles scheduled per week by regular air services on April 1, 1947, totaled 71,624 on domestic routes and 222,412 on international routes.

FINANCE. The 1946 budget estimated revenues at 289,500,000,000 fr. and expenditures at 271,000,000,000 fr. The internal debt on May 31, 1946, was 1,999,441,000,000 fr. French investments in the U. S. (1941) totaled \$747,000,000. U. S. lend-lease assistance received by France and her possessions (\$2,377,072,000, or 4.8% of the total) was surpassed only by that received by the British Empire and the U. S. S. R. On Dec. 2, 1945, the Bank of France (capital: 182,500,000 fr.) and four large private banks were nationalized, and commercial credit came under government supervision.

TOPOGRAPHY. With a maximum length of about 600 miles and a width of 550 miles, France is second in size to Russia among Europe's nations. Its coastline is about 1,950 miles. In the Alps near the Italian and Swiss borders is France's highest point—Mont Blanc, 15,781 feet. The forest-covered Vosges Mountains are in the north-east and the Pyrenees are along the Spanish border. Except for extreme northern France, which is part of the Flanders plain, the country may be described as four river basins and a plateau. Three of the streams flow west—the Seine into the English Channel, the Loire into the Atlantic, and the Garonne into the Bay of

Biscay. The Rhône flows south into the Mediterranean. For about a hundred miles, the Rhine is France's eastern border. West of the Rhône and northeast of the Garonne lies the Central Plateau, covering about 15 percent of France's area, and rising to a maximum elevation of 6,188 feet. In the Mediterranean, 115 miles east-southeast of Nice, is Corsica, the island of Napoleon's birth, with an area of 3,367 square miles. **MINERALS.** French coalfields, most extensive in the northeast, ordinarily supply about 70 percent of domestic needs. Lorraine, Anjou and Normandy have valuable iron ore deposits. Provence has bauxite. Alsace has potash and oil. Limousin has kaolin, zinc, lead and tar.

MINERALS, 1938 and 1946

(in metric tons)

Mineral	1938	1946
Coal	46,502,000	47,205,600*
Iron ore	33,062,400	16,214,400
Bauxite	684,960	451,860
Lead ore	5,736	11,664
Potash salts	3,310,800	3,286,572

*Approximate.

FORESTS AND FISHERIES. France, with over 26,000,000 wooded acres, produces well over \$100,000,000 worth of forest products in a normal year, including resin, turpentine, timber and nuts. The annual fish catch is normally second only to that of Britain among the nations of Europe. Cod and sardines are usually the biggest items; others are coalfish, herring, whiting, mackerel, tunny, lobster, rays, flounder, sole.

CLIMATE. France's climate is temperate but varies from long cold winters and hot summers in the northeast, to the sub-tropical temperature of the Mediterranean coast with very mild winters. With no high western elevations to block moisture-laden winds from the Atlantic, all France has adequate rainfall of 20 to 30 inches a year. The mean annual temperature at Paris is 50.5° (36.5° in January and 65.5° in July). The rainiest months are June and October, with February usually the driest.

Andorra

This 191-square mile autonomous and semi-independent state on the Franco-Spanish border has been under the joint suzerainty of the French State and the Spanish bishops of Urgel since 1278. It is a cluster of mountain valleys inhabited by about 5,200 stubborn and traditionally independent people whose principal pursuit is the tending of flocks. Catalán is the language spoken, and both French and Spanish currency are in use. Andorra is governed by a Council General of 24 members, elected for four years by the heads of families. A First Syndic, chosen by the Council, constitutes the supreme executive authority.

French Colonial Empire

AFRICA

Algeria (Colony)

(L'Algérie)

Governor General: Yves Chataigneau.

Principal cities (census 1936): Algiers, 252,321 (capital); Oran, 194,746 (seaport); Constantine, 106,830 (trading center); Bône, 83,275 (seaport; phosphates).

Monetary unit: French franc.

Languages: Arabic, French.

Religions: Mohammedan (natives), Roman Catholic, Jewish.

HISTORY. Algeria, more than three times the size of Texas and situated on the northern bulge of Africa, was of great strategic importance during World War II. After U. S. and British troops occupied it following the landings of Nov. 8, 1942, it became the headquarters of the provisional French government of General Charles de Gaulle until the summer of 1944. For many months during that period it was the headquarters of the Allied Expeditionary Force.

Algeria became a Roman colony after the fall of Carthage in 146 B.C. and was overrun by the Arabs in the 7th, 11th and 12th centuries. In the 13th century it became one of the three kingdoms founded on the ruins of the old Almohade Empire. Following a brief Spanish occupation, it went under Turkish suzerainty in 1518. For 300 years thereafter Algiers was the headquarters of the notorious Barbary pirates who preyed on Mediterranean shipping. The French ended Turkish rule by taking Algiers in 1830, but it was not until 1847 that they were able to suppress a holy war instigated in 1839 by Abd-el-Kader.

French policy for a time vacillated between complete assimilation of Algeria as part of France, and a decentralized administration under a governor general. In 1896 the idea of assimilation was abandoned for a number of years. After France fell in 1940, Algerian government officials were loyal to Vichy, but their control was ended by the Allied invasion of the African coast in 1942.

Arab Nationalist demands for greater autonomy have been intensified recently; a statute approved in 1946 but not yet effective provides for a highly decentralized government with a locally elected assembly.

GOVERNMENT. In effect, Algeria is part of France. It is represented in the National Assembly by 15 deputies, and it is one of the ten military districts of France, with both French and natives subject to military service. The governor general is responsible to the Interior, rather than Colonial, Ministry in the French Cabinet.

SOCIAL AND ECONOMIC CONDITIONS.

Primary and secondary schools for Europeans are on French lines. Most natives do not go beyond the primary grades. The knowledge and use of French has spread widely among the natives, but the teaching of Arabic in all schools was made compulsory in 1946. There is a university at Algiers, with faculties of science, arts, law, medicine and pharmacy.

Approximately 86 percent of the population is native, 12 percent French and 2 percent other European. The native population is Berber, with Arab admixture physically assimilated.

The area under cultivation is about 25,000,000 acres, more than 20 percent of which is owned by European farmers, chiefly in the fertile coastlands. The principal crops are wheat, barley and oats. Algeria is a leading wine producer, with almost 4 percent of the cultivated area devoted to vines. Both 1945 and 1946 were disastrous years for wine production. Output in the latter year, 237,000,000 gallons, was less than 50 percent of normal. Olive trees are widespread; the average annual yield of oil is about 2,500,000 gallons. Tobacco, corn, vegetables, flax, silk, figs and dates are also produced. Much of the area is more adapted to grazing than to agriculture.

European industries include those dependent on crops, such as distilling and oil and flour milling, as well as the making of leather, tobacco and matches. There are also small native industries, particularly the traditional carpet weaving.

Exports in 1938 (latest data available in 1947) totaled \$162,290,000, of which 83.5 percent went to France. Imports were \$143,766,000, of which 75.1 percent came from France. Wines comprised 50.6 percent of the exports (441,356,000 gallons, almost all to France). Others were fruits, iron ore, meal and olive oil. The chief imports were cotton cloth, sugar, machinery, metal manufactures and vehicles.

Algeria has 2,734 miles of railway. A central line runs from the Moroccan to the Tunisian frontier with branches north to all the ports and south into the Southern Territories. There is an excellent network of roads of more than 30,000 miles, and motor transport is well developed, including regular passenger and freight lines across the Sahara. Only French ships may normally trade between France and Algeria.

Revenue in 1946 was estimated at 14,269,-147,449 fr. and expenditures at 14,258,906,-954 fr.

Algeria is a leading producer of phosphates (1944: 242,893 tons). Iron ore of good quality is found near the Tunisian frontier and on the Oran coast. Zinc, lead and salt are also important minerals; and

small amounts of oil and coal are produced.

Forests, mostly scrub, cover about 6,000,000 acres; cork is the leading product. Fish products include anchovies, sardines, shellfish, spray and tuna.

TOPOGRAPHY AND CLIMATE. Algeria fronts on the Mediterranean for more than 700 miles. Northern Algeria extends inland for 185 to more than 200 miles. South of it is the big, economically unimportant Southern Territories. Low plains cover small areas near the coast, but 68 percent of Algeria is a plateau between 2,625 and 5,250 feet above sea level. The region between the Sahara and the Mediterranean reaches a high point of 7,641 feet.

Most of the streams are periodic with the rains. The Chélif is the principal river, over 435 miles long. On the Saharan slopes, the oases or the hot sands absorb the streams as soon as they leave the mountain ridges.

Rainfall averages 20 to 40 inches on the coast, and decreases to virtually none in the Sahara. On the coast, temperatures average about 52° in winter, 77° in summer. Inland, the winter average is about 40° and summer about 81°, although the Sahara summer average is from 95° to 105°.

CAMEROUN (FRENCH CAMEROONS)—Status: Under United Nations trusteeship.

Capital: Yaoundé (pop. 1944: 18,754).

High Commissioner: René Hoffer.

Foreign trade (1944): exports, \$7,261,000 (71% to Britain); imports, \$6,199,000 (50% from Britain, 22% from U. S.).

Chief exports: cacao, palm kernels and oil, coffee.

Agricultural products: sweet potatoes, millet, cacao, bananas, palm kernels and oil.

Minerals: diamonds, gold, tin.

Forest product: timber.

Cameroun is bounded principally by French Equatorial Africa, except for the Atlantic Ocean on the west, the British Cameroons mandate on the northwest, and Río Muni on part of its southern boundary. In 1884 the Cameroons became a German colony (Kamerun), and after the conclusion of World War I the region was divided as a League mandate between Britain and France, four-fifths of the area going to France. The new U. N. trusteeship area has political and financial autonomy under a French High Commissioner, responsible to the French government and to the administrative council of French Equatorial Africa. Cameroun joined the Free French movement in 1940. The chief port and commercial center is Douala (pop. 1944: 36,040); the administrative center, Yaoundé, is located on the central plateau.

The climate is tropical and unhealthful for Europeans; not even in the cool months

does the temperature generally fall below 70°. Rainfall is heavy on the coast and is fairly evenly distributed throughout the year.

FRENCH EQUATORIAL AFRICA—Status: Colony.

Governor General: (Vacant).

Capital: Brazzaville (pop. 24,941).

Foreign trade (1944): exports, \$15,292,800 (27% to U. S., 18% to Britain); imports, \$15,147,000 (30% from Britain, 23% from U. S.).

Chief exports: gold, wood, cotton, wool, palm kernels and oil.

Agricultural products: cotton (1945: 45,000 tons), wool, palm kernels and oil, coffee.

Minerals: gold (1944: 2,561 kg.), zinc ore.

Forest products: timber, rubber, copal gum, wax.

The colony lies in west central Africa, bordered on the west by the Atlantic, Cameroun, Nigeria and French West Africa; on the north by Libya; on the east by Anglo-Egyptian Sudan; and on the southeast and south by Belgian Congo. The coast, an early slaving center, was first settled by the French in 1839; French hegemony was subsequently extended by exploration and conquest of the native tribes. The territory declared for Free France following the armistice of June, 1940, and Brazzaville became capital of De Gaulle's Free French movement.

The governor general, responsible to the Minister of Colonies in the French Cabinet, administers the whole area as an administrative unit with the aid of an administrative council; each of the four territorial regions (Gabon [Gabun], Middle Congo, Ubangi-Shari, Chad) has a governor responsible to him. There were, in 1944, 6,923 Europeans; most of the Africans are Negroes. There are Arab and Fulani settlements in the Chad region, and several Moslem sultanates. Natural resources, both forest and mineral, are vast but relatively unexploited. The country's economic life depends primarily on the forest products. Timber exports from an estimated 300,000 square miles of forest were 440,000 tons in 1937, and postwar exports are expected to exceed that figure. The colony is capable of exporting large quantities of hard okoumé wood, either in logs or in veneer form.

The climate is tropical—hot and humid—and the average temperature is about 80° (78° at Brazzaville), varying only slightly throughout the year. Rainfall averages about 60 inches annually, with no marked wet or dry seasons.

FRENCH SOMALILAND—Status: Colony.

Capital: Djibouti (population 20,000).

Governor: Paul H. Siriex.

Chief exports: coffee, hides, salt.

Mineral: salt.

French Somaliland, at the southern entrance to the Red Sea, was acquired by France between 1883 and 1887 by treaties with the Somali sultans, although posts on the coast had been acquired in 1856. This small, largely arid and sparsely populated region is important chiefly because of the port of Djibouti, the main artery of Ethiopia's trade via the Djibouti-Addis Ababa railway. The colony is administered by a governor, responsible to the French government and assisted by an advisory council. It adhered to the Free French movement by an agreement initiated in December, 1942. In 1944 there were 629 Europeans.

French West Africa (Colony)

(L'Afrique Occidentale Française)

Governor General: René Barthès.

Principal cities (est. 1943): Dakar, 98,700 (capital, chief port); St. Louis, 43,200.

Monetary unit: French franc.

Languages: French, colonial tongues.

Religions: Mohammedan, Pagan.

HISTORY AND GOVERNMENT. The St. Louis Colony, founded in 1626 at the mouth of the Sénégal River, was probably the first permanent white settlement in French West Africa in which the French established themselves, largely for the purpose of pursuing the slave trade. Little progress inland was made until after 1854, when a scheme was conceived to link the upper Sénégal with the upper Niger. After 1876 the coast settlements were extended steadily into the interior through a series of missionary and economic campaigns. In 1895 the colony of French West Africa was formed under one governor general by the unification of its various components.

The governor general of the colony is appointed by the French government and is assisted by a legislative council. Governors responsible to him administer the eight constituent colonies—Sénégal, French Guinea, the Ivory Coast, Dahomey, Dakar, French Sudan, Mauritania and Niger. Each of these has considerable autonomy, with the central colonial government supervising services common to all. The area is represented in the French National Assembly.

SOCIAL AND ECONOMIC CONDITIONS. Attendance at elementary schools in 1945 was approximately 75,000, including 1,100 European children. There were 15 higher primary schools with 2,450 students, and three secondary schools, with 700 students. Private schools enrolled approximately 31,000.

No racial unity exists in French West

Africa, and there is great variation of physique, manner, custom and language. The population is native except for approximately 28,000 French (1943) and 9,000 other Europeans. Non-Negroid tribes include the Saharans, Moors, Tuaregs and Fulbé. About half the population normally is Mohammedan, but a number of tribes have remained spirit worshippers.

Agriculture has expanded rapidly in recent years. Millet, rice and maize are the principal food crops, and vegetable oils are a leading commercial product. Groundnuts are cultivated in Sénégal, and palm kernels and oil are produced in Dahomey and the Ivory Coast. Other products are coffee, cotton, cacao and bananas. Stock raising is important in French Sudan and Mauritania, relatively dry districts in the northern part of the colony. Manufacturing is undeveloped except for small native industries.

Imports in 1946 totaled 5,990,770,000 fr., including cotton cloth, metal products, vehicles, machinery, beverages, foodstuffs and petroleum. Sénégal and the Ivory Coast account for over half the exports, which totaled 4,120,592,000 fr. in 1946 and included groundnuts, coffee, bananas, cotton, cacao, palm kernels and vegetable oil.

The middle Niger and lower Sénégal Rivers are navigable, but French West Africa's railways (1945: 2,700 mi.) are more important as interior communications. Dakar, with the best harbor on the west African coast, is the principal port and also an important stop on international air routes between South America and Europe. There are several other good ports.

The estimated budget for 1946 balanced at 6,157,000,000 fr., about a third of which was the total local budget of the eight component colonies.

Gold, found in alluvial deposits in Sénégal and in veins in the Ivory Coast, is the only important mineral. Timber and precious woods are important, especially in the Ivory Coast. Forest products include timber, mahogany logs, gum arabic, shea butter (a solid, white fat obtained from the seeds of the shea tree) and nuts, kapok and beeswax. Some rubber is exported.

TOPOGRAPHY AND CLIMATE. The colony, comprising a sixth of Africa, is half as big as Europe; it is generally a plateau broken by two mountain ranges. The Futa Jallon, from 2,300 to 4,900 feet in elevation, parallels the coast for about 430 miles, and Mount Nimba, on the Liberian border, rises 5,250 feet. There are also mountainous regions in the Sahara districts to the north. The Niger, 2,600 miles long, is the principal river.

The central and northern parts of the colony have two seasons, rainy and dry. In the southernmost regions there are two

rainy seasons, separated by a short dry season. Average annual rainfall at St. Louis is 16.7 inches; at Dakar, 20.2 inches. Temperatures on the west coast average about 70° in winter and 82° in summer, with daily variation of about 20°.

MADAGASCAR AND DEPENDENCIES—Status: Colony.

Capital: Tananarive (Antananarivo) (est. pop. 1946: 170,000).

Governor General: Marcel de Coppet.

Foreign trade (1946): exports, \$39,671,000 (58% to France, 19% to U. S.); imports, \$31,023,000 (30% from France, 23% from U. S.). **Chief exports:** vanilla 21%, coffee 15%, meat, honey, manioc.

Agricultural products (1945): rice (770,000 metric tons), coffee (28,000 tons), sugar cane (230,000 tons), vanilla (653 tons), manioc, bananas, corn, coconuts, sweet potatoes.

Minerals: gold, graphite (1946 exports: 8,875 metric tons), mica, phosphates.

Forest products: gum, medicinal plants, rubber, tannins, dyewoods.

Madagascar, lying off the southeast coast of Africa, is the fourth largest island in the world, with a length of 995 miles and an average width of 250 miles. It remained independent under native rulers until 1885, when it came under French protection. French troops conquered the island in 1895 and it became a French colony the following year. The last native ruler, Queen Rānavàlona III, was exiled.

British troops landed on the island May 5, 1942, during World War II, and an armistice with Vichy French forces was signed November 5, 1942. The island is administered by a governor general responsible to the minister of colonies in Paris, assisted by a recently created General Assembly. Native nationalist outbreaks occurred in 1947, and French troops maintained order with difficulty.

The chief occupations are cattle raising (1943: 6,000,000 cattle) and agriculture; there are several food-processing and textile plants. The chief port is Tamatave on the east coast; the capital, Tananarive, is located on the central plateau. In 1941 there were 52,383 French and other non-native residents, including Hindus, Arabs and other Asiatics. The natives, collectively known as Malagasy, are divided into several tribes. Outlying dependencies include the islands of Europa, Juan da Nova, Bassas da India and Glorieuses.

The Comoro Islands, formerly a dependency, were formed as an autonomous territory in 1946, under the direct administration of the colonial ministry in Paris.

The climate of Madagascar is generally tropical, with a warm and wet season from November to April and a cool, dry season the rest of the year. Temperatures vary between 55.5° and 95° (at Tamatave, 80° in February, 68° in July).

Morocco (Protectorate) (Maroc)

Area: 161,459 square miles. (French 153,870; Spanish 7,589).

Population: French Morocco 8,597,551 (1944); Spanish Morocco 991,954 (1940).

Sultan: Sidi Mohammed ben Youssef.

French Resident General: Alphonse Juin.

Spanish High Commissioner: Juan Varela.

Principal cities (est. 1944): Casablanca, 524,985 (chief seaport); Marrakech, 230,835 (trading center); Fez, 222,748 (commercial center); Rabat, 154,839 (French administrative center).

Monetary units: French franc, Spanish peseta.

Languages: Arabic, French, Spanish.

Religions: Chiefly Mohammedan.

HISTORY. Morocco, about the size of California, is just south of Spain across the Strait of Gibraltar and looks out on the Atlantic from the northwest shoulder of Africa. It was once the home of the Berbers, who helped the Arabs invade Spain in A.D. 711 and then revolted against them and gradually won control of large areas of Spain for a time after 739.

The country was ruled successively by various native dynasties and maintained regular commercial relations with Europe, even during the 17th and 18th centuries when it was the headquarters of the famous Sallu pirates. In the 19th century, clashes with the French and Spanish became frequent. Finally, in 1904, France and Spain divided Morocco into zones of French and Spanish influence, and these were established as formal protectorates in 1912. In the same year a revolt at Fez was followed by the appointment of General (later Marshal) Louis Lyautey as governor general. His administration, lasting until 1925 except for a brief period during World War I, was remarkable for its efficiency and far-sighted policies.

Meanwhile, Morocco had become the object of big-power rivalry, which almost led to a European war in 1905 when Germany attempted to gain a foothold in the rich mineral country. By terms of the Algeiras Conference (1906), Morocco was internationalized economically and France's privileges were limited. War again seemed imminent in 1911, when Germany dispatched a warship to Agadir in an evident attempt to intimidate France. Again the dispute was settled, however, and this time Germany recognized France's right to establish a protectorate over Morocco.

The Tangier Statute, concluded by Britain, France and Spain in 1923, created an international zone at the port of Tangier, permanently neutralized and demilitarized. In World War II Spain occupied the zone, ostensibly to insure order, but she had to withdraw in 1945, and the international rule was reestablished.

The French zone in Morocco was under the Vichy government of France during

part of World War II, but three days after the Allied landing in North Africa in 1942 it came under Allied control.

GOVERNMENT. Morocco nominally is an absolute monarchy under a sultan, but actually the French resident general at Rabat and the Spanish high commissioner at Tetuan direct Moroccan policies to a large extent. The sultan lives in the French zone, and delegates authority to representatives in the Spanish zone and Tangier.

SOCIAL AND ECONOMIC CONDITIONS. Most of the natives are illiterate; some get rudimentary education in Koranic schools or state-maintained institutions. Education is provided in both zones for Europeans.

The natives are Berbers, roughly divided by customs and way of life into three groups—the Riff group along the coast, the central or Berber group in the mid-Atlas Mountains, and the southern or Chleuh in the high Atlas and the Sus. There is a large Jewish population. Most of the Europeans live in the cities.

Morocco is essentially agricultural. In the French zone, about 25,000,000 acres are cultivated, with 1945 production of wheat coming to 170,000 long tons; of barley, 230,000 tons. Corn, beans, peas, hemp, sorghum, citrus fruit and dates also are raised. The olive oil yield in 1943 was 8,000 tons. In 1943 the native stock raisers kept 13,000,000 sheep and 2,800,000 cattle.

In the Spanish zone, agriculture is largely undeveloped, but it has potential importance. In 1943, 154,739 tons of barley were produced; wheat, maize and sorghum crops were also important.

Manufacturing industries introduced by Europeans, mostly small, produce chemicals, flour, leather, stone and textiles. Native industries include carpet weaving and the making of Turkish slippers.

Exports from the French zone in 1944 totaled 2,700,000,000 fr., and imports 3,600,000,000 fr. Chief exports are phosphates, wheat, fish, wool and eggs. Imports include sugar, mineral oil, cotton and rayon cloth and machinery. Exports from the Spanish zone in 1944 totaled about \$9,834,700, and imports \$45,054,200. A large proportion of the trade is carried on with Spain. Major exports are cattle, eggs and iron ore; imports include flour, sugar, tea, wine and textiles.

Railroads in 1946 totaled 860 miles of standard gauge in the French zone and 73 in the Spanish zone. Highway mileage in 1940 was approximately 5,000 in the French zone, about 600 in the Spanish zone and 65 in Tangier. Casablanca, which handles 80 percent of the French zone trade, has perhaps the world's largest artificial port.

The importance of Tangier, once Morocco's first port, has declined under the

international regime, and its harbor works are obsolete.

Revenues in the French zone in 1944 were estimated at 2,604,982,000 fr.; expenditures at 2,604,658,000 fr. The budget for the Spanish zone in 1938 balanced at 111,785,-245 pesetas. The 1946 budget of the international administration at Tangier provided for receipts of 360,000,000 fr. and expenditures of 351,000,000 fr. Custom receipts provide most of the revenue.

Exploitation of French Morocco's almost inexhaustible deposits of phosphate is a state monopoly and produced a total of 2,783,636 metric tons in 1946. Other major minerals are coal, cobalt, iron ore, manganese ore, molybdenum, tin, zinc and lead. Iron ore (1945: 830,000 tons) is the chief mineral of the Spanish zone; others are antimony and manganese.

Cork, gums and tannins are the principal forest products in the French zone, mostly from the northern Atlas slopes; in the Spanish zone, cork, wax and charcoal are leading products. Waters off both coasts are rich fisheries.

TOPOGRAPHY AND CLIMATE. On the Atlantic coast, there is a fertile plain; the Mediterranean coast is mountainous, making most of the Spanish zone a rugged area. The Atlas Mountains, running northeastward from the southern part of the country to the Algerian frontier, average 11,000 feet in elevation.

Morocco's climate is essentially Mediterranean, modified by the Atlantic. On the Atlantic coast the temperatures are relatively cool (at Mogador, 61.5° in January and 72.3° in August). Inland the climate is more continental, with colder winters and hotter summers (at Fez, 50° in January and 80.6° in August). The rainy season is in October-November and April-May. Snow falls at altitudes above 3,000 feet.

RÉUNION (Bourbon)—Status: Département of Metropolitan France.

Capital: St. Denis (pop. 1941: 32,637).

Prefect: Paul Demange.

Foreign trade (1945): exports, 458,729,000 fr.; imports, 275,282,000 fr. Chief exports: sugar, essential oils (geranium oil, oil of vetiver, oil of ilang-ilang).

Agricultural products: sugar, vanilla, coffee, maize.

Discovered by Portuguese navigators in the 16th century, the island, then uninhabited, was taken as a French possession in 1638. It is located about 450 miles east of Madagascar, in the Indian Ocean.

There is no indigenous population. About three-quarters of the inhabitants are of European origin; the remainder are Creoles, mulattoes, Negroes, Indians and other Asiatics. Tropical cyclones of hurricane variety are frequent during the change of seasons; one of the most recent (Jan., 1945)

caused damage of over \$1,000,000. Occasionally a *raz de marée* (tidal wave) does great damage. Sugar-cane cultivation and the production of rum are the principal occupations.

TOGO—Status: Under United Nations Trusteeship.

Capital: Lomé (pop. 1945: 27,928).

Commissioner: Jean Noutary.

Chief exports: cacao, palm kernels, corn, cotton, copra.

Agricultural products: cacao, palm kernels and oil, cotton, copra, coffee.

Mineral: iron ore.

Forest products: dye woods, oil palms.

Togo, a part of the former Slave Coast, lies between the British Gold Coast colony and French West Africa. Established as a German colony in 1884, the area was divided as a League mandate by France and Britain at the end of World War I, with France obtaining two-thirds of the total area. It was placed under U. N. trusteeship in Dec., 1946.

Togo is administered by a commissioner responsible to the French government, assisted by an economic and financial council composed of officials, merchants and nine elected native delegates. Agriculture and grazing are the chief industries. In 1945, there were 638 Europeans. The coastline, only 32 miles long, is low, sandy and without harbors.

The coastland climate is hot, humid and unhealthful, with wet seasons lasting from March to June and from September to November.

Tunisia (Protectorate)

Ruler (Bey): Sidi Mohammed al-Amin.

French Resident General: Jean Mons.

Prime Minister: Mustapha Saak.

Principal cities (census 1936): Tunis, 219,578 (capital); Sfax, 43,333 (phosphate port); Bizerte, 28,468 (seaport and naval base); Sousse, 28,465 (seaport).

Monetary unit: French franc.

Languages: Arabic, French, Italian.

Religion: Predominantly Mohammedan.

HISTORY. Tunisia was settled by the Phoenicians and Carthaginians in ancient times. Except for an interval of Vandal conquest in A.D. 439-533, it was part of the Roman Empire until the Arab conquest of 648-69. Then it was ruled by various Arab and Berber dynasties until the Turks took it in 1570-74. The founder of the present dynasty, Hussein ben 'All, was proclaimed sovereign by the occupation troops in 1705 and later succeeded in making the office hereditary, although subject to nominal Turkish sovereignty.

Throughout much of its history, Tunisia was essentially a pirate state, preying on

Mediterranean shipping. In modern times, Italy became predominant economically in the area, but after French troops occupied the area in 1881, the reigning Bey signed a treaty acknowledging a French protectorate.

Following the Allied landings in North Africa in 1942, Tunisia became a battleground with the Axis forces pinched between the British 8th Army advancing from Libya and the U. S., British and French forces from Algeria. The Axis units surrendered in May, 1943, and Tunisia was turned over to the De Gaulle government. On May 15, 1943, the reigning Bey, Sidi Mohammed al-Mounsaf, was removed and replaced by his cousin, the present ruler.

Fanned by Arab nationalist agitation elsewhere, the Tunisian nationalist party, *Destour*, although banned by the French, intensified its activity in 1946-47. Its aim was the complete independence of Tunisia and its adherence to the Arab League.

GOVERNMENT. Although the Bey is theoretically sovereign, a French resident general actually controls all military and civil affairs, assisted by a cabinet. Local administration is conducted by native officials under the close supervision of the French. The Southern Territory is subject to military administration.

SOCIAL AND ECONOMIC CONDITIONS. In 1937 (latest data available in 1947), Tunisia's 492 public and 35 private schools had 96,520 pupils, about a third of them French and Italian. The Great Mosque at Tunis is a Moslem University, and there are 1,332 Moslem private schools.

Tunisia's population (by the 1936 census it was 89.6 percent Arab and Bedouin, 5.4 percent French, 4.6 percent Italian and .4 percent other) is concentrated in the cities and on the coast. There are about 100,000 nomads.

Agriculture is the chief industry. Over a quarter of the arable land is in wheat. Other important crops are barley, oats, corn, sorghum, beans and peas. Average annual wine production is about 38,000,000 gallons (1946: 14,494,540). Average olive oil production is about 50,000 short tons annually. The Cape Bon region is largely devoted to citrus fruits, the southern oases to dates. Tunisia exports ordinarily more than 50,000 sheep and 4,000 tons of wool a year.

Leading industries include flour milling, oil refining, lead smelting and distilling. Native industries flourish, including the spinning and weaving of wool, and the making of pottery and leather goods.

Tunisia, Algeria and France are under a single customs union for a number of products. Exports in 1946 were valued at 4,034,819,000 fr., of which 58 percent went to France. They included olive oil, wine, wheat, phosphates, iron ore, lead and

esparto grass. Imports were 10,014,563,000 fr., of which 70 percent came from France. The leading items were cotton cloth, machinery, metal products, autos, rice, sugar and coal.

There were 4,800 miles of roads and 1,310 miles of railway in 1938. Tunis, Bizerte, Sousse and Sfax are the principal ports.

Ordinary revenue for 1946 was estimated at 4,201,760,000 fr., and expenditures about the same. There was an extraordinary budget balanced at 6,475,420,000 fr. for public works, education and agricultural research. State monopolies, including tobacco, provide about 25 percent of the revenue and indirect taxes about half.

Tunisia's extremely rich deposits of phosphates are mined principally in the Gafsa and Kef regions. Production in 1946 was approximately 1,540,000 short tons. Its iron ore is of good quality. Other minerals are lead, zinc, mercury, manganese, copper, salt and poor-grade lignite.

Products derived from Tunisia's 2,500,000 acres of forests include lumber, mine props and cork. Alfa—127,000 tons in 1938 but only 6,000 tons in 1945—is exported, mainly to England, for the making of paper pulp. About 15,000 Tunisians work at fishing. Annual sponge production averages 125,000 tons.

TOPOGRAPHY AND CLIMATE. Tunisia, at the northernmost bulge of Africa, thrusts out toward Sicily to mark the division between the eastern and western Mediterranean. It is mountainous in the north, covered by plains in the east, and projects southward to the Sahara area. Its principal river, the Medjerda, in the north, is 228 miles long. The climate is Mediterranean with mean temperature extremes at Tunis of 52.7° and 79.2°. Annual rainfall ranges from 24 inches in the north to less than five inches in the south.

WESTERN HEMISPHERE

FRENCH GUIANA (including ININI)—Status: Département of Metropolitan France.

Capital: Cayenne (population 11,704).

Prefect: Robert Vignon.

Foreign trade (1945): exports, 45,400,000 fr.; imports, 126,800,000 fr.

Agricultural products: bananas, cacao, corn, manioc, rice, sugar cane.

Mineral: gold (1946: 19,749 oz.).

French Guiana, lying north of Brazil and east of Surinam (Dutch Guiana) on the northeast coast of South America, was first settled in 1626. Penal settlements, embracing the area around the mouth of the Maroni River and the Iles du Salut (including Devil's Island), were founded in 1852. During World War II the colony at first adhered to the Vichy government, but the Free French took over in March, 1943. The large and scantily populated territory

of Inini in the hinterland is administered separately. Economic development is extremely backward; transportation is almost entirely by water, conditions are unsanitary and large quantities of foodstuffs must be imported. Gold is by far the chief export.

January temperatures average 79°, September and October temperatures 82°. Rainfall is heavy.

GUADELOUPE—Status: *Département* of Metropolitan France.

Capital: Basse-Terre (population 13,638).

Prefect: Jean Pougnat.

Foreign trade (1946): exports, 1,495,000,000 fr.; imports, 1,115,000,000 fr. Chief exports: sugar, bananas, rum.

Agricultural products (est. 1946): sugar (44,-800 metric tons), bananas (30,000 tons), coffee, cacao, manioc, tobacco, vanilla.

Guadeloupe, lying in the West Indies about 300 miles southeast of Puerto Rico, was discovered by Columbus in 1493. French colonization began in 1635. It consists of two large islands, separated by a narrow arm of the sea, and several outlying smaller islands. Most of the population is Negro and mulatto. The largest city and chief port is Pointe-à-Pitre (population 44,551). About half the cultivated area is devoted to sugar cane. The manufacturing of rum and spirits is the principal industry. Mean annual temperature is 78°.

MARTINIQUE—Status: *Département* of Metropolitan France.

Capital: Fort-de-France (pop. 1944: 64,525).

Prefect: Pierre Trouillé.

Foreign trade (1945): exports, 450,700,000 fr.; imports, 461,300,000 fr. Chief exports: sugar, rum, bananas.

Agricultural products (1946): sugar (25,900 short tons), bananas, pineapples, cacao, coffee. Manufactures: rum, sugar.

Martinique, lying in the Lesser Antilles about 300 miles northeast of Venezuela, was probably discovered by Columbus in 1502 and was taken for France in 1635. Following the Franco-German armistice of 1940 it had a semi-autonomous status under the High Commissioner, Admiral Georges Robert, until 1943, when he relinquished his authority to the Free French. The colony, administered by a governor assisted by an elected council, is represented in the French legislature. The population is mainly Negro and mulatto. Most of the arable land is devoted to sugar cultivation. Fort-de-France, the capital and chief commercial center, has an excellent harbor. Mean annual temperature of the coast region is 80° (77° in January, 83° in June).

ST. PIERRE AND MIQUELON—Status: Colony.

Capital: St. Pierre.

Administrator: René Marchand.

Foreign trade (1945): exports, 49,900,000 fr.; imports, 44,500,000 fr. Chief exports: cod and other fish products.

The sole remnant of the French colonial empire in North America, these islands were first occupied by the French in 1660. Their only importance arises from their proximity to the Grand Banks (they lie 10 mi. south of Newfoundland) which makes them the center of the French Atlantic cod fisheries.

ASIA

FRENCH INDIA—Status: Colony.

Capital: Pondichéry (pop. 1941: 53,101).

Governor: Charles Baron.

Chief exports: groundnuts, cotton textiles.

Agricultural products: groundnuts, manioc, rice, onions.

French India is a collective name for the scattered French possessions in India—on the Coromandel coast are Pondichéry, Karikal and Yanam; on the Malabar coast, Mahé; and in Bengal, Chandernagor. The chief possession is Pondichéry, founded by the French in 1674. The governor, responsible to the minister of colonies in Paris, is assisted by a representative assembly. More than 90 percent of the population of French India is Hindu.

Indo-Chinese Union

High Commissioner: Emile Bollaert.

Principal cities (census 1936): Hanoi, 149,000 (capital); Cholon, 145,000 (commercial center); Saigon, 111,000 (chief port; rice); Phnom Penh, 103,000 (capital, Cambodia).

Monetary unit: Piaster.

Languages: Annamese, Cambodian, French.

Religions: Buddhism, Christianity (4%).

HISTORY AND GOVERNMENT. The Indo-Chinese Union (French Indo-China), at the southeast corner of Asia, first met the West in the 16th century, when Portuguese traders and missionaries arrived. French influence dates from 1787, and in the 19th century France received preferential treatment for helping the emperor of Annam recover his throne. During the last half of the century, France gradually extended influence over the whole area as it exists today.

After France fell in 1940, Vichy authorized the entry of Japanese troops, and the country became one of the springboards for the Japanese campaign against Singapore. When, in March, 1945, the Japanese seized control of the whole country, Annam and Cambodia declared their independence. After the Japanese surrender, British and Chinese troops occupied Indo-China in the face of a growing nationalist movement, and restored order for the French authorities, who assumed control officially on March 4, 1946.

Until the beginning of World War II, Indo-China was an administrative federa-

tion of one colony—Cochin-China; four protectorates—Annam, Tongking, Cambodia and Laos; and a special territory—Kwangchowan. These had various degrees of native rule, but the real administrator of each unit was the French chief resident.

Early in 1945, France announced its intention of organizing the area into five states constituting a federal union, with the components enjoying limited self-government under a French governor general. Under this plan, Cambodia received internal autonomy on Jan. 6, 1946. The Republic of Viet Nam—comprising Tongking and the northern part of Annam—was recognized on March 6, 1946, as a free state within the Indo-Chinese Union and the French Union. Viet Nam leaders, however, demanded cession of the rich rice area of Cochin-China as well as southern Annam. The French steadfastly refused to accede to this demand, and fighting broke out again on Dec. 19, 1946.

On Dec. 23, French Premier Blum sent Major General Jacques-Philippe Leclerc to Saigon to effect a settlement. Ho Chi Minh, President of Viet Nam, declared that the fighting had been precipitated by a French ultimatum. By Feb. 7, the French forces admitted they had suffered 1,855 casualties, and Viet Nam admitted to 1,500. Emile Edouard Bollaert, a civilian, was appointed High Commissioner on March 5 to succeed Admiral Georges Thierry d'Argenlieu. On Sept. 10, the French made a final appeal to the Viet Name to accept independence within the French Union, leaving France in control of defense and foreign policy. Fighting continued, with many reports of Ho Chi Minh's death.

SOCIAL AND ECONOMIC CONDITIONS. In 1939 there were 33 elementary and 6 high schools for French children, with attendance of over 6,000. For natives there were 7,141 primary schools with 519,000 students, 19 middle schools with 5,640 students, and 4 high schools with 550 students. Attendance at the 47 professional schools and at the University of Hanoi was mostly native.

The Annamese, strongly influenced by contact with China, make up 80 percent of the Union's population. Next in importance are the Cambodians, about 3,000,000 strong. There are several other racial groups, some very primitive. The Chinese, concentrated in the cities, are the merchant class and own 90 percent of the rice mills. Most of the population lives on plains near the sea.

Rice, grown on five-sixths of the cultivated land, employs and feeds most of the population, and is the leading export and chief source of wealth. Production, centered in Cochin-China, averages up to 4,500,000 tons annually. Other crops include sugar, copper, cotton, tobacco, tea, coffee, groundnuts, sweet potatoes and beans.

The Union is largely an exporter of raw materials. Its factories are small and process goods for local consumption or agricultural and forest products for export. Most important are the rice and saw mills. There are also cotton and silk textile factories, sugar refineries, match and paper factories.

Exports in 1946 (excluding Annam and Tongking) were 10,817,111,000 fr. and imports, 4,942,121,000 fr. Chief exports were rubber (70%), rice and pepper. Industrial activity and trade continued to be hampered in 1947 by unsettled political conditions.

Indo-China has several thousand miles of waterways, including the Mekong River, which is navigable for two-thirds of its course. In 1939 there were 2,093 miles of railways, 75 percent state-owned. An excellent highway system includes 5,563 miles of improved road, and 11,477 miles of local road.

Mining is most developed in the north. Output in 1944 included: coal, 591,935 tons; tin, 401 tons; tungsten, 110,230 lbs.; and zinc, 1,549 tons. Iron ore, gold, phosphate, manganese, bauxite and lead are mined.

Forests cover 76,570,000 acres of Indo-China. The high mountain ranges of the north supply valuable tropical hardwood, bamboo, lacs and vegetable oil. Laos has rich teak forests. Indo-China's fishing industry provides a major staple food to go with rice. Rubber exports (1946) were 136,376 metric tons.

TOPOGRAPHY AND CLIMATE. Extending about a thousand miles from north to south, Indo-China has two great delta regions—the Mekong in the south and the Song Koi in the north. These are separated by the Annam Mountains, and to the west of them are the mountainous continental regions of Laos. The climate is monsoonal, with nearly all of the very heavy rainfall between May and October; April and May are the hottest months (86° to 93.2°). Laos, in the interior, is cooler and drier than most of Indo-China.

OCEANIA

FRENCH PACIFIC SETTLEMENTS—Status: Colony.

Governor: Pierre Maestracchi.

Capital: Papeete, on Tahiti (pop. 1941: 11,614).

Foreign trade (1945): exports, 185,392,000 fr.; imports, 196,493,000 fr. Chief exports: vanilla, phosphate, copra.

Agricultural products: coconuts, sugar, vanilla, tobacco.

Mineral: phosphate.

The term French Pacific Settlements is applied to the scattered French possessions in the eastern Pacific—Mangareva (Gambier), Makatea, Marquesas Islands, Rapa,

Rurutu, Rimatara, Society Islands, Tuamotu Archipelago, Tubuai and Raivavae—which were organized into a single colony in 1903. The appointed governor is assisted by an administrative council. The principal and most populous island—Tahiti, in the Society group (pop. 1941: 23,133)—was claimed as French in 1768. Plebiscites conducted in September, 1940, gave support to the Free French movement of Gen. de Gaulle. The natives are mostly Polynesians. The climate of Tahiti is hot and humid, but not unhealthful. There is no clear division of seasons.

NEW CALEDONIA AND DEPENDENCIES— **Status:** Caledonia.

Capital: Nouméa (population 11,108).

Governor: Georges Parisot (also French Commissioner General in the Pacific).

Foreign trade (1944): exports, 227,000,000 fr.; imports, 405,000,000 fr. **Chief exports:** nickel, chrome ore, coffee, copra, shells.

Agricultural products: coffee, copra, corn, cotton, manioc, rice, tobacco.

Minerals: nickel, chromite.

Sea product: mother-of-pearl.

New Caledonia (6,533 sq. mi.), lying about 1,070 miles northeast of Sydney, Australia, was discovered by Captain James Cook in 1774 and annexed by France in 1853. The government, in the hands of an appointed governor and an elective council, also administers the Isle of Pines, the Wallis Archipelago, the Loyalty Islands, the Chesterfield Islands, Walpole, the Huon Islands, Futuna and Alofi, with a total area of 1,121 square miles. The colony—taken over in the summer of 1940 by the Free French after a bloodless revolution—is one of the richest of the Pacific islands in mineral resources, particularly nickel and chrome ore. The natives are Melanesians; about one-third of the population is white. A French penal colony was established in the 19th century. Average temperature on New Caledonia varies between 65° and 72°.

NEW HEBRIDES—Status: Anglo-French condominium.

Capital: Vila (population 1,200).

Foreign trade (1941): exports, £107,688; imports, £88,800. **Chief exports:** copra, cacao.

Agricultural products: coconuts, cacao, coffee.

Sea products: trochus and burghaus shell.

The New Hebrides, under joint Anglo-French administration since 1914, lie northeast of New Caledonia. The islands, about 40 in number, joined the Free French movement after a plebiscite in July, 1940. Most of the natives are Melanesians of mixed blood; there were 212 British and 792 French in 1944. The largest island is Espiritu Santo (875 sq. mi.). The French and British high commissioners in the Pacific are represented by resident commissioners.

Germany

Area (est.): 143,243 square miles.

Population (census 1946): 65,910,999 (predominantly German).

Density per square mile: 460.1.

Allied Control Council: Gen. Lucius Clay (U. S. A.); Marshal Vassily D. Sokolovsky (U. S. S. R.); Lt. Gen. Sir Brian H. Robertson (United Kingdom); General Joseph Koenig (France).

Principal cities (census 1939): Berlin, 4,332,242 (capital); Hamburg*, 1,682,220 (chief port); Munich†, 828,235 (Bavarian capital); Cologne*, 768,426 (transportation center); Leipzig†, 701,606 (trading, publishing center); Essen*, 659,871 (steel works); Dresden†, 625,174 (railway center, Elbe port); Frankfurt on Main†, 546,649 (manufacturing).

Monetary unit: German mark.

Language: German.

Religions (1933): Protestant, 62.7%; Roman Catholic, 32.5%; Jewish, 0.7%; others, 4.1%.

*British occupation zone. †U. S. zone. ‡Soviet zone.

HISTORY. Germany, utterly defeated in World War II, was partitioned into four national zones, and although the Allies in 1945 had declared their intention of treating the country as an economic whole, 1947 found a Germany still divided and in economic chaos. At the Moscow Conference (Mar. 10–Apr. 24, 1947) it was evident that the occupying powers were in disagreement on every fundamental issue concerning Germany—the character and extent of reparations, postwar boundaries, the drafting of a final treaty, the level of industrial production and the form which a central German government was to take. Perhaps the only bright part of this dismal picture was the Anglo-American agreement for economic merger of the U. S. and British zones which promised to bring some measure of economic recovery.

In the days of Julius Caesar the territory that is now Germany was inhabited by barbarous tribes that came originally perhaps from Central Asia. One of these Germanic tribes, the Franks, attained supremacy in western Europe under Charlemagne, who was crowned Holy Roman Emperor in A. D. 800. By the Treaty of Verdun (843), Charlemagne's lands east of the Rhine were ceded to the German prince Louis. Additional territory acquired by the Treaty of Mersen (870) gave Germany approximately the area she maintained throughout the Middle Ages. For several centuries after Otto the Great was crowned king in 936, the German rulers were also usually heads of the Holy Roman Empire.

Relations between State and Church were changed by the Reformation, which began with Martin Luther's 95 theses, and came to a head in 1547, when Charles V scattered the forces of the Protestant League at Mühlberg. Freedom of worship was obtained by the Peace of Augsburg (1555), but a Counter Reformation took place later, and a dispute over the succession to

Germany, the land was held mostly by peasant proprietors. About 20 percent of the total area was unfit for cultivation, and of the remaining area only about half was under the plow. The great northern plain is fertile in some areas, but it consists elsewhere of thin, sandy soils fit only to grow potatoes and rye. The rich lands of central Germany, especially Saxony, produce sugar beets containing a high percentage of sugar. Outside of a few grazing districts, mixed farming is done.

Germany continued to suffer from food shortages in 1947, and recovery was further retarded by a severe drought. The loss of rich agricultural lands beyond the Oder-Neisse and the crowding of a larger population into a smaller area aggravated the situation.

Crop production in the U. S. zone in 1946 (in thousands of metric tons with 1936 production in parentheses) was as follows: bread grains 1,567 (2,705), feed grains 1,120 (2,127), oilseed 23 (23), sugar beets 814 (1,137) and potatoes 5,380 (9,066).

INDUSTRY. Prewar Germany was one of the world's greatest industrial nations, with more than 41 percent of her employed population engaged in industry. In the prewar years the handicraft system was gradually replaced by large industrial establishments. Of the 1,917,793 industrial establishments listed in the 1933 census, more than 90 percent were small establishments, and only one percent employed more than 50 persons, but over two-fifths of all industrial workers were concentrated in this one percent. Iron and steel production was concentrated in the Ruhr and Saarland. The industry suffered from a great lack of domestic iron ore, which was largely offset by imports. The electrical industry was concentrated in Berlin, the chemical industry in Bavaria, Rhenish Prussia and Prussian Saxony, and textiles in Saxony.

GERMAN INDUSTRIAL PRODUCTION

1933 AND 1937

(in tons)

Industry	1933	1937
Pig iron	5,247,000	15,960,000
Raw steel	7,492,000	19,387,000
Rolling mill production	5,558,000	14,179,000
Sulfuric acid	1,206,000	2,050,000
Coal-tar distillations	208,000	464,000
Woolens	138,000	170,000
Cottons	350,000	369,000
Rayon	28,800	57,200
Passenger cars	92,200*	264,600*
Trucks, buses	13,300*	64,404*
Beetroot sugar	1,428,000	2,210,000
Cement	3,820,000	12,605,000
Electricity	25,654,000†	48,969,000†
Ships	73,723‡	435,606§

*Units. †Million kwh. ‡1934 tonnage. §Tonnage.

REPARATIONS. By the Potsdam declaration and subsequent enactments, the Allies specified that Germany was to pay reparations, not in long-term payments reckoned in cash as after World War I, but in the delivery of gold, assets held abroad, and—most important—all machinery and equipment of plants making arms and munitions, ocean shipping, synthetic ammonia, gasoline, minerals, aircraft, etc., all to be removed from Germany by 1951. The three major purposes of reparations were to deprive Germany of all war production facilities, to assist the recovery of nations conquered by Germany, and to see that Germany's standard of living did not exceed that of other European nations.

TRADE. Germany's prewar trade follows:

IMPORTS, EXPORTS AND BALANCE OF

TRADE 1932-1939

(in millions of marks)

Year	Imports	Exports	Balance
1932	4,667	5,739	+1,072
1933	4,204	4,871	+667
1934	4,451	4,167	-284
1935	4,159	4,270	+111
1936	4,218	4,768	+550
1937	5,468	5,911	+443
1938*	5,348	5,236	-112
1939†	2,755	2,814	+59

*Excluding Austria and Sudetenland.

†Six months only; including Austria and Sudetenland but not Bohemia-Moravia.

In 1938 Germany's principal customers were the Netherlands 8.7 percent, Britain 7.1 percent, Italy 6.6 percent, Sweden 5.2 percent and France 4.4 percent. Her major suppliers were the U. S. 8.3 percent, Britain 5.7 percent, Italy 5.2 percent, Sweden 4.9 percent and Argentina 4.4 percent. Major German exports were machinery 14.4 percent, ironware 9.2 percent, coal and coke 9.1 percent (39,753,000 tons), chemicals 7.3 percent and electrical machinery and appliances 6.0 percent. Major imports were manufactured goods 7.3 percent, beverages and tobacco 6.4 percent, fruits 5.5 percent, iron ore 5.2 percent (24,171,000 tons).

Trade, both interzonal and foreign, made some progress in 1947. The foreign export target for the Anglo-U. S. zones for 1947 was set at \$350,000,000, an increase of 350 percent over actual 1946 exports (\$100,000,000). It was hoped that the raising of the industrial level in the two zones would balance imports and exports by 1949.

COMMUNICATIONS. German railway trackage and rolling stock, as well as the canal system, were largely destroyed during World War II, and the lack of adequate transportation seriously hindered German economic recovery. Less than 30 percent of the prewar merchant marine (1939: 4,482,682 gross tons) was still afloat, and about 1,200,000 tons of this were distributed

among the United Nations in the spring of 1946, leaving only a tiny merchant fleet for essential coastal shipping and fishing. Navigable waterways (1939: 7,930 miles) carried 153,219,700 tons of freight in 1938, of which the Rhine accounted for about half. The German river fleet (1938) comprised 17,757 vessels of 6,468,568 tons. Shipping on the Rhine is now controlled by the Central Commission of the Rhine—an international body composed provisionally of U. S., British, French, Swiss, Dutch and Belgian representatives—which was reconvened in October, 1945.

FINANCE. The monetary unit is the German mark, nominally equivalent to 40.3325 U. S. cents, but severely reduced in value by printing of new currency. The exchange value of the mark has been pegged at 10 U. S. cents by American occupation authorities. The Allies seized or compelled the delivery of all monetary gold and paper money in the banks. In January, 1945, the Reich debt was 315,000,000,000 marks; the note circulation had risen to 47,000,000,000 marks, as compared with 3,000,000,000 marks in 1939.

NATURAL RESOURCES. Aside from rich deposits of coal and potash, Germany's mineral wealth is not considerable. The Ruhr, Krefeld and Aachen districts of western Germany (mostly in the British zone) constitute one of the world's greatest coal mining regions, with prewar reserves estimated at 65,520,000,000 tons. Production in this area (about 78 percent of total prewar production) is handicapped by the prevalence of thin seams, but distribution is favored by easily accessible natural waterways and efficient canals. Most of the Silesian reserves, estimated at 5,240,000,000 tons, are in the area under *de facto* Polish administration. Production in the Ruhr area reached a daily average of 240,000 tons in August, 1947, a little over half the prewar average, but production in the Saar in the French zone was exceeding prewar levels. About 25 percent of Ruhr coal was being exported. Efforts were being made to raise the level of production and thus speed Western European economic recovery, in which German coal is a key factor. Potash reserves, estimated at 15,300,000,000 tons, are located in the Harz, Saale and Halberstadt districts and in Saxony.

MINERAL PRODUCTION, 1933 AND 1939 (in short tons)

Mineral	1933	1939
Coal	120,737,785	220,460,000
Lignite	139,723,785	253,529,000
Iron ore	2,857,162	12,057,674*
Lead	100,309	200,001
Zinc	178,573	234,002†
Potash	8,116,014	18,124,315*

*1938. †Including Czechoslovakia.

Slightly over a quarter (27.5%) of prewar Germany was covered by forests, which yielded timber (1935: 1,193,462,652 cu. ft.) as well as material for paper, wood-fiber, cellulose and other products. Despite a highly advanced system of reforestation, Germany's prewar wood supply was insufficient for her needs.

Fisheries are an essential part of the German economy. The catch (1937) amounted to 740,205 tons (excluding plaice, whales and whale oil) valued at \$41,256,139. In 1946, fishing fleets operating under the supervision of the joint Anglo-American Fishery Control Board landed 85,000 metric tons of fish at the Bremen enclave.

TOPOGRAPHY. Germany lies in north central Europe, bounded on the west by the Netherlands, Belgium, Luxemburg and France; on the south by Switzerland, Austria and Czechoslovakia; on the east by Poland; and on the north by the Baltic Sea, Denmark and the North Sea. The northern plain, the central hill country and the southern mountain district constitute the main physical divisions. The Bavarian plateau in the southwest averages 1,600 feet above sea level, but to the west, in the Black Forest, it reaches 9,721 feet in the Zugspitze, the highest point in Germany. Other mountain ranges are the Böhmerwald, the Erzgebirge and the Riesengebirge on the Czechoslovak border, and the Harz Mountains in central Germany.

There are several important navigable rivers. In the south the Danube, rising in the Black Forest, flows east across Bavaria into Austria. The other important rivers flow north. The Rhine, which rises in Switzerland and flows across the Netherlands in two channels to the North Sea, is navigable by smaller ocean-going vessels as far as Cologne. The Rhine and the Elbe, which also empties into the North Sea, and the Oder, emptying into the Baltic, are all navigable within Germany for ships of 400 tons. The Weser, flowing into the North Sea, and the Main and Mosel (Moselle), both tributaries of the Rhine, are also important.

CLIMATE. The climate of Germany is intermediate between the oceanic climate of western Europe and the continental climate farther east. The generally equable climate of the north grades into pronounced extremes toward the eastern border, where the winters are long and cold and the summers short and hot. The average summer temperature in Germany is 60° to 62°. The sheltered mountain valleys of the south enjoyed a more temperate climate, especially the valley of the Rhine above Mainz. Rainfall is heaviest in the south and west (over 30 inches) but all of Germany is well watered.

Greece (Kingdom)

(Hellas)

Area: 51,304 square miles.*

Population (est. 1940)*: 7,458,000 (Excluding Dodecanese: Greek, 92.8%; Turkish, 3.8%; Macedonian, 1.3%; Spanish, 1%; others, 1.1%).

Density per square mile: 145.3.

Sovereign: King Paul I.

Premier: Themistocles Sophoulis.

Principal cities (est. 1940): Athens (Athenai), 392,781 (capital); Piraeus (Peiraievs), 284,079 (port of Athens); Salonika (Thessalonike), 236,524 (seaport); Patras (Patrai), 61,278 (seaport); Kavalla, 49,980 (seaport; tobacco).

Monetary unit: Drachma.

Languages: Greek, Turkish.

Religions: Greek Orthodox, 96%; Mohammedan, 2%; Jewish, 1.1%; others, .9%.

*Including Dodecanese.

HISTORY. Rugged, mountainous Greece—ancient cradle of one of the world's great civilizations—suffered cruelly in World War II and emerged as a land torn by civil war between its right and left political elements, while complete economic chaos reigned. Alone among the Balkan states, it remained outside the Russian "iron curtain" in 1947. World attention was focused on the little country (about the size of North Carolina) as it became a center of political struggle between the Soviet Union and the bloc of nations which opposed further Russian expansion.

Ancient Greece, with a recorded history going back to 776 B.C., reached the peak of its glory in the 5th century B.C.; and by the middle of the 2nd century B.C., it had declined to the status of a Roman province. It remained within the Eastern Roman Empire until Constantinople fell to the Crusaders in 1204. In 1453, the Turks took Constantinople, and by 1460 Greece was a Turkish province. The insurrection made famous by the poet Lord Byron broke out in 1821, and in 1827 Greece was set up an independent nation, with sovereignty guaranteed by Britain, France and Russia. Prince Otto of Bavaria was recognized as king five years later, but he was ousted by a revolution in 1862. Prince William of Denmark, as George I, succeeded him.

Up to this time Greece consisted only of the Peloponnesus and the lower part of the peninsula north of the Gulf of Corinth. Britain gave Greece the Ionian Islands in 1864, and Thessaly was added in 1881. Greek success in the Balkan Wars of 1912-13 brought the addition of Macedonia, Epirus, Crete and many Aegean Islands. In World War I, Greece kept a precarious neutrality until June, 1917, when King Constantine (who had succeeded George I in 1913) was forced to abdicate in favor of his second son, Alexander. Greece then entered the war on the Allied side. By the Treaty of Sévres, Greece was awarded Thrace and part of Asia Minor. Turkey,

however, drove the Greeks out of Smyrna in 1922.

Greece was proclaimed a republic on March 25, 1924, and there followed strife and dissension between Royalists and Republicans, although fair order was maintained during the premierships of Eleutherios Venizelos from 1928 to 1933.

In 1935, the people voted for the return of King George II, who had abdicated in 1924 after a short rule. In April, 1936, General John Metaxas became premier and by August he had abolished parliament and set up a dictatorship.

Greece was invaded by the Italians in 1940. By April, 1941, the Greeks not only had driven the Italians out of Greece but were well into Albania. The Germans came to Mussolini's rescue, invaded Greece from Bulgaria, and took Athens on April 27, 1941. Starvation and harsh persecution of the Greeks were common during the Axis occupation. After liberation, Greece became a land of conflict with armed bands of Royalists and Communists terrorizing the nation. The government, which had fled the country, returned in Oct., 1944, following Greece's liberation by British forces. In less than two months, all the EAM (National Liberation Front) ministers, decided leftists, resigned from the government, setting up a crisis which brought on months of fighting between British troops and leftist resistance forces.

Peace was not restored until Feb. 12, 1945. Three short-lived premierships followed until the elections of March 31, 1946, gave a majority of Assembly seats to the Populist (Royalist) Party. Its leader, Konstantinos Tsaldaris, became premier on April 18, 1946. However, all the leftist groups boycotted the March elections, and the depredations of armed bands of Communists and Royalists continued.

Tsaldaris' rightwing cabinet yielded in January, 1947, to a coalition headed by Demetrios Maximos. In Sept., Tsaldaris agreed to serve as Deputy Premier under the leadership of Sophoulis, who had the approval of the U. S. Meanwhile, the country, ruled by a regency since 1944, overwhelmingly approved the return of George II in a plebiscite held Sept. 1, 1946. The King returned Sept. 28 but died April 1, 1947, and was succeeded by his brother Paul I.

Recurring clashes on the northern border with Yugoslavia and Bulgaria created a serious international situation which led the United Nations Security Council to appoint a commission of inquiry early in 1947. In July, bands of Albanian guerrillas invaded northwest Greece, and a small-scale war raged in the frontier region.

On May 22, 1947, President Truman approved a Congressional bill making avail-

able to Greece the sum of \$300,000,000, half of which was to be used for re-equipment of Greek armed forces and the remainder for agricultural, industrial and financial rehabilitation. Early in Sept., soon after the arrival of a U. S. supervisory mission, the new Sophoulis cabinet was formed.

GOVERNMENT AND DEFENSE. Greece is a constitutional hereditary monarchy. A Constituent Assembly of 354 members was elected March 31, 1946, to revise the 1911 constitution. Nominal executive power is vested in the king, but the government is administered by a Council of Ministers, headed by the premier, which must enjoy the Assembly's confidence. Under the terms of the 1947 U. S. loan, U. S. officials are advising various departments of the government, which is noted for its inefficiency.

The sovereign, Paul I, was born Dec. 14, 1901, and was married Jan. 9, 1938, to Princess Frederika Louise of Brunswick. They have one son, Prince Constantine, born June 2, 1940 (the heir apparent), and two daughters.

Military service is compulsory. The army's strength in 1947 was estimated at 117,000, organized into seven poorly equipped divisions. About 30,000 gendarmerie were under military control, and the British garrison numbered almost 10,000. In the Royal Hellenic Navy were 7 destroyers, 6 submarines, 4 corvettes and various smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory for all children between the ages of 7 and 12. In 1938 (latest statistics available in 1947) Greece had 743 kindergartens with 38,338 pupils, 8,339 primary schools with 985,018 pupils and 407 high schools with 92,687 students. There are three universities (two at Athens and one at Salonika).

The predominant religion is Greek Orthodox, the religion of the state, but all faiths are tolerated.

From 1922 to 1924, more than 1,350,000 Greek refugees were repatriated from Asia Minor. Many were settled in Greek Macedonia and Greek Thrace, from which many Turks were removed to Anatolia.

About three-quarters of the population engages in agricultural pursuits, although only one-fifth of the land is arable. Agricultural production in 1947 was nearer to prewar levels than any other phase of the economy, but the country was still dependent on food imports. The greater part of the cultivated area is devoted to cereals: wheat (1945: 385,000 tons), barley and corn. There are also olive trees, vines, tobacco and currants. Olive oil production in 1945 was 111,200 short tons. The principal fruits are oranges, lemons, figs, mandarins, apples, pears and grapes. Wool production in 1946 was 5,990 short tons.

Development of large-scale Greek manufacturing is blocked by lack of coal resources and of capital. The most valuable products are textiles, chemicals and food items. Among other processed or manufactured products are olive oil, wine, spirits, flour, carpets, leather, cigarettes and building materials. Industrial rehabilitation still proceeded slowly in 1947, hampered by war damage and subsequent internal strife.

Exports in 1939 were valued at \$75,007,000, of which 27.5 percent went to Germany, 21.6 percent to the U. S., 15.7 percent to Britain and 6.3 percent to Italy. Imports were valued at \$100,081,000, of which 29.9 percent came from Germany, 12 percent from Britain, 9.4 percent from Rumania and 1 percent from the U. S. Principal exports were: horticultural products, especially tobacco and currants, 70.8 percent; oils and waxes, especially olive oil, 9 percent; mineral products, 4.8 percent; and wine, 3 percent. Trade statistics for 1945, reflecting abnormal conditions, showed exports of 1,232,667,000 drachmai and imports of 6,862,482,000 drachmai.

The large prewar merchant marine, comprising 589 ships of 1,812,723 tons and 710 sailing vessels of 55,417 tons, played a vital part in the national economy. World War II shipping losses amounted to 1,178,000 tons; the merchant marine on Mar. 31, 1946, totaled 1,700,000 deadweight tons. The chief ports are Piraeus (for Athens) and Salonika.

Railway mileage in 1945 totaled 1,670. Highways totaled 8,450 miles. Wartime damage was severe. The railways lost more than 80 percent of their rolling stock and 90 percent of their locomotives. Highways were reduced in many areas to a series of potholes, and became unusable.

The 1946-47 budget placed revenues at 1,401,000,000,000 drachmai as against expenditures of 1,577,000,000,000 drachmai. Tentative budget estimates for the fiscal year beginning Apr. 1, 1947, showed a deficit of 1,682,000,000,000 drachmai (\$287,000,000).

Greek minerals are varied but are exploited only moderately. Principal ones are lignite, iron ore, iron pyrites, magnesite, chromite, lead, bauxite, molybdenum, emery, marine salt and the country's famous marble. About a fifth of the country is forested, largely with pine, fir and oak. Resin and turpentine are the main forest products. The principal sea product is sponges.

TOPOGRAPHY AND CLIMATE. North central Greece, Epirus and western Macedonia all are mountainous. The main chain of the Pindus Mountains rises to 9,000 feet in places, separating Epirus from the plains of Thessaly. Greek Thrace is mostly a lowland region separated from European

Turkey by the lower Maritsa River. Among the many Greek islands are the Ionian group off the west coast, 742 square miles in area; the Cyclades group to the south-east, 996 square miles; other islands in the eastern Aegean, including Lesbos, Samos and Khios, 1,486 square miles; and Crete, the fourth largest Mediterranean island, 3,199 square miles. Crete, largely mountainous, is about 160 miles in length, with a width varying from 7 to 35 miles.

The Dodecanese, a group of 13 islands in the Aegean Sea near the coast of Asia Minor, were ceded to Greece by the treaty signed with Italy at Paris on Feb. 1, 1947. Transfer of sovereignty awaits ratification of the treaty by Italy and the U. S. S. R.

The Greek climate is varied but generally similar to that of other Mediterranean countries. The maritime regions have a temperate climate, with short winters and little snow or frost. In the uplands the winters are long and severe. Precipitation is heaviest in the mountains. Mean temperature at Athens is about 63°, with maximum of 99° in July and minimum of 31.5° in January. The summer heat is moderated by sea breezes and cool northerly winds from the mountains.

Guatemala (Republic)

(República de Guatemala)

Area: 42,042 square miles.

Population (est. 1943): 3,450,372 (Indian, 60%; white, 5%; mixed and other, 35%).

Density per square mile: 82.1.

President: Juan José Arévalo.

Principal cities (census 1940): Guatemala City, 163,826; est. 1946, 225,000 (capital); Quezaltenango, 33,538 (coffee, sugar); Puerto Barrios, 15,784 (chief Atlantic port); Zacapa, 14,443 (coffee, livestock).

Monetary unit: Quetzal.

Language: Spanish.

Religion: Roman Catholic.

HISTORY AND GOVERNMENT. Once the site of the ancient Mayan civilization, Guatemala was conquered by Spain in 1524 and for the next 300 years was the major center of Spanish government in Central America. Guatemala was one of the founders of the Central American Union in 1823, and in 1839 set itself up as a republic. From 1898 to 1920 the dictator, Manuel Estrada Cabrera, ran the country, and from 1931 to 1944, General Jorge Ubico Castañeda was the "strong man." In July, 1944, the National Assembly elected General Federico Ponce president, but he was overthrown in October, and in December Dr. Juan José Arévalo was elected as the head of a leftist regime which has continued to press its reform program in the face of conservative resistance. He took office in March, 1945.

The Constitution of 1945 provides that a president shall be elected every six years by direct popular vote and cannot succeed himself immediately. A seven-member Council of State consists of four presidential appointees and three men elected by the National Assembly, the unicameral legislature whose 76 members are popularly elected for four-year terms. Guatemala has an army of 20,000 and a small air force. Guatemalan lend-lease military receipts from the United States (1941-45) totaled \$21,089,000, an amount exceeded in Latin America only by the receipts of Brazil.

SOCIAL AND ECONOMIC CONDITIONS. Education, advanced under Ubico, is free and compulsory. In 1943, a total of 152,274 pupils attended 2,784 primary schools. In 1942, twenty-eight secondary schools had an enrollment of 5,600. The university of Guatemala is located in Guatemala City. The government began a literacy campaign in 1946, providing 500 adult centers to augment the existing school system.

Most of the ruling class is drawn from the 5 percent of the population that is white. Approximately 60 percent is Indian, and the rest is mixed white, Indian and Negro. Spanish is the official language, but at least eighteen Indian dialects are spoken. The Indians are the chief labor supply.

Agriculture engages 90 percent of Guatemalans. Coffee accounts for a fifth of the cultivated land and two-thirds of the exports, followed by bananas, sugar cane, corn, beans, wheat, cotton and tobacco. Exports in 1946 came to \$36,278,000 (1945: \$30,436,000) and imports to \$36,201,000 (1945: \$23,349,000), chiefly textiles, railway equipment, motor vehicles, flour, gasoline and oil.

Guatemalan manufacturing is small and local. The country has 600 miles of public railway connecting the coasts, 280 miles of private railway and 4,045 miles of highways. Puerto Barrios, on the Atlantic side, is the main port of entry, and is linked by rail to the capital.

The 1946-47 budget estimated expenditures at \$28,125,000, ordinary revenues at \$26,500,000 and the treasury surplus at \$1,625,000, including U. S. war bonds. British investments on Dec. 31, 1946, amounted to \$9,014,860.

Guatemala has reserves of gold, silver, lead, tin, copper, mercury, coal, antimony, salt, chromite and sulfur, but many of these minerals exist in insufficient quantity to justify exploitation.

The country's vast forests, mostly in the Petén region, yield chicle for chewing gum, a small amount of rubber, and dyewoods and cabinet woods, such as cedar, mahogany and logwood. About 15,000,000 acres are in hardwoods and 3,000,000 acres in softwoods. Chicle exports in 1945 were

2,050 tons, mahogany (1946) 2,250,000 bd. ft., and ordinary timber, mostly pine, (1946) 3,650,000 bd. ft.

TOPOGRAPHY AND CLIMATE. Most of Guatemala is mountainous, with many volcanic peaks, including Tajumulco, 13,814 feet high and the loftiest in Central America. The northern part is the great plain of Petén, largely uncultivated, sparsely populated, and geographically part of the Yucatán peninsula. The narrow Pacific slope, well watered and fertile, is the most densely populated and the most productive part of Guatemala. The climate is hot and humid on the coasts, with heavy rainfall, but is temperate in the highlands. The rainy season lasts from May to October in the interior, and often until December on the coast. January is the coldest month and May the warmest.

Haiti (Republic)

(République d'Haiti)

Area: 10,748 square miles.

Population (est. 1944): 3,000,000 (Negro, 90%; mulatto, 10%).

Density per square mile: 279.1.

President: Dumarsais Estimé.

Principal cities (est.): Port-au-Prince, 125,000 (capital, chief port); Gonaïves, 20,000 (farming district); Cap-Haïtien, 15,000 (seaport); Aux Cayes, 15,000 (seaport, coffee).

Monetary unit: Gourde.

Language: French.

Religion: Roman Catholic.

HISTORY. Haiti, the only Negro republic in the Western hemisphere, occupies the western third of the island of Hispaniola, which was discovered by Columbus in 1492. Its political past is stormy, and today it is the smallest and most thickly populated of the American republics, a nation beset by illiteracy, poverty and unemployment.

After successive Spanish and French domination, Haiti became a kingdom in 1801 under Toussaint L'Ouverture, a Negro leader. He was later captured by the French and died in prison, but the kingdom lasted and declared its independence in 1804, becoming a republic in 1820. In 1822 Haiti took over all of Hispaniola, and carried on until 1843, when the eastern two-thirds of the island revolted and established the Dominican Republic. Today the island is the only one in the world containing two sovereign nations.

Decades filled with revolution, corruption and disease came to a bloody climax in 1911-15, when Haiti had seven presidents in four years. After the assassination of the last one, United States Marines moved in. By a 1916 treaty, the United States agreed to help administer the country until the Haitians proved themselves capable of

orderly self-government. The last Marines left in 1934, but a U. S. fiscal expert continued to supervise customs until 1941. On January 11, 1946, President Elie Lescot was driven from the country by revolution, and a three-man military junta took over until the election of President Estimé on Aug. 16.

GOVERNMENT. Normally the president is elected for seven years by two-thirds vote of the National Assembly. That body consists of a 37-member chamber of deputies, elected for four years by popular vote; and a 21-member senate, of which eleven members are elected by the chamber of deputies, and ten are appointed by the president. The Garde d'Haiti, about 4,500 strong, serves as army and police force.

SOCIAL AND ECONOMIC CONDITIONS. Most Haitians are descended from African slaves. Their illiteracy rate is estimated at 92 percent. Although 1946 figures showed enrollment of 91,000 in primary and secondary schools, actual attendance is much lower. A campaign against illiteracy under UNESCO auspices was initiated in 1947. The mulattoes—lightened by the blood of the early French settlers—dominate the political and social life of the nation. Many of them are Paris-educated. While the ruling classes speak pure French, most of the people speak the patois of Creole French, and many of them still practice the strange folk religion of voodoo.

Haiti is predominantly agricultural. Coffee, which makes up more than 30 percent of Haitian exports, is the principal crop, followed by sisal, sugar cane, cotton, bananas and cacao. Coffee exports in 1945-46 were about 27,000 short tons. Manufacturing is almost entirely for local consumption, but there are several sisal factories and sugar refineries.

Exports for the year ending September 30, 1946, totaled \$22,823,000, and imports \$15,922,000. The United States took 62 percent of the exports and supplied 86 percent of the imports. After coffee, exports included bananas, cacao, logwood, cotton, sisal, raw sugar, molasses and rice.

In 1947 Haiti had about 1,800 miles of improved road and 160 miles of railway.

More than 75 percent of Haitian revenue is derived from customs paid in American currency on exports and imports. The 1946-47 budget was balanced at \$9,321,832, one of the highest in the country's history. However, there is usually a budget surplus. The public debt on April 30, 1947, was \$8,955,700, mostly foreign, but internal loans were to be floated to retire the foreign debt.

Minerals, relatively unexploited, include gold, silver, iron, copper, antimony, tin, coal, nickel and gypsum. In 1943, a sizable bauxite deposit was found and signed over for U. S. development. Inland Haiti has

forests of mahogany, pine, *lignum vitae* and other commercial woods.

TOPOGRAPHY AND CLIMATE. Haiti, about the size of Maryland, is two-thirds mountainous, with the rest marked by great valleys, extensive plateaus and small plains. The most densely populated and productive region is the Cul de Sac plain, near Port-au-Prince. Rivers are swift and generally not navigable. The climate is hot on the coast, temperate in the mountains, with hurricanes frequent in the May-to-October rainy season. Port-au-Prince has a mean annual temperature of 81°.

Honduras (Republic)

(República de Honduras)

Area: 59,145 square miles.

Population (census 1945): 1,201,310 (mestizo, 86%; Indian, 10%; Negro, 2%; white, 2%).

Density per square mile: 20.3.

President: Dr. Tiburcio Carías Andino.

Principal cities (census 1945): Tegucigalpa, 55,715 (capital); San Pedro Sula, 22,116 (bananas, sugar); La Ceiba, 12,185 (seaport, bananas); Tela, 8,969 (seaport, bananas).

Monetary unit: Lempira.

Language: Spanish.

Religion: Roman Catholic.

HISTORY AND GOVERNMENT. Columbus discovered Honduras on his last voyage in 1502; it was a Spanish colony and part of Guatemala until 1821, the year of the general Central American revolt against Spain. Honduras declared its independence in 1838, and has been troubled by revolution and war ever since. American Marines intervened in 1903 and 1923. In 1931, 1932 and 1937, major revolutions were crushed by force. The Nicaraguan-Honduras boundary dispute of 1937 almost caused war, and in April, 1945, the country was invaded from Guatemala by a group of Honduran exiles, who were suppressed.

Legislative power is held by the unicameral Congress of Deputies, whose members are popularly elected for six years. The president also is elected for four or six years and is not supposed to succeed himself, but Congress has twice extended the term of Dr. Carías, the last time until 1949.

Military service is compulsory. The army is estimated to be slightly under the 2,500 strength agreed upon by the Central American states.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and supposedly compulsory, but less than 25 percent of the children go to school. The government is trying to reduce illiteracy, estimated at 82 percent. In 1944 there were 1,083 primary schools with 53,956 pupils and 21 intermediate schools with 2,787. The National University at Tegucigalpa had 367.

Most of the population is of mixed Spanish-Indian blood, but the ruling class is of nearly pure Spanish descent. Except among isolated Indian tribes, Spanish is the common language. Most of the Negroes are British subjects imported for plantation work.

Honduran economy depends upon the banana, which makes up more than 50 percent of the nation's exports. The biggest plantations are along the northern coast. Exports in 1946 totaled 14,183,557 stems. Other crops are corn, coffee, rice, henequen, tobacco and coconuts. Honduras also is an important source of sarsaparilla. Cattle raising and dairy farming flourish on rich pasture lands. Manufacturing is small and local. In 1944-45, exports were \$12,133,070 and imports \$13,247,486. The United States supplied 66.5 percent of the imports and took 83 percent of the exports which, besides bananas, included gold, silver, coffee, livestock and coconuts.

Honduras' railroads—900 miles of track—are all owned by fruit companies and used to transport bananas; they are confined to the northern coastal area. Since the country is mountainous and rugged, aviation has become an important means of travel. Despite its small size, the country has 38 landing fields. Highway mileage is estimated at 740 miles. Lake Yojoa and several rivers are navigable for small vessels.

Honduras showed a budget surplus (\$181,461) for the first time in several years in 1943-44; the external debt, largely held in England, was reduced to \$1,761,937 and the internal debt to \$4,017,192. The budget for 1944-45 provided for expenditures of 11,384,521 lempiras. British investments on Dec. 31, 1946, totaled \$889,820.

In 1944-45, Honduras exported 21,746 troy ounces of gold and 3,055,157 troy ounces of silver; these are the two most important mineral products. Copper and iron exist in paying quantity but are undeveloped. The country is noted for rich forest resources, particularly the tropical hardwoods. In 1945, 2,072,808 bd. ft. of mahogany lumber and logs and 1,100,000 bd. ft. of pine were exported.

TOPOGRAPHY AND CLIMATE. Honduras, in the north central part of Central America, has a 400-mile Caribbean coastline and a 40-mile Pacific frontage. Generally mountainous, it has fertile plateaus and river valleys and narrow coastal plains. The Bahía (Bay) Islands, off the north coast, produce large quantities of coconuts. Of numerous rivers on the northern slope of Honduras, the Ulua drains a third of the nation and is navigable for most of its course. The climate is oppressive in the coastal lowlands, pleasant in the interior highlands. At Tegucigalpa, maximum temperature is about 90° (in May), and minimum 50° (December).

Hungary (Republic)

Area: 35,911 square miles.
 Population (census 1939): 10,817,000 (Magyar, German, Slovak).
 Density per square mile: 301.2.
 President: Zoltán Tildy.
 Prime Minister: Lajos Dinnyes.
 Principal cities (est. 1943): Budapest, 1,585,-678 (capital, Danube port); (census 1939): Szeged, 141,254 (textiles, wheat); Debrecen, 128,442 (livestock); Kecskemét, 83,837 (horticulture); Pécs, 73,887 (farming).
 Monetary unit: Forint, replacing Pengő.
 Languages: Hungarian, German.
 Religions (est.): Roman Catholic, 64.9%; Greek Catholic, 2.3%; Helvetican Evangelical, 20.9%; Augsburg Evangelical, 6.1%; Jewish, 5.1%; others, .7%.

HISTORY AND GOVERNMENT. Fascist-minded militarists and greed for more territory lined up Hungary with Germany and Italy just before World War II. The fruits of this alliance and the resultant defeat of Hungary caused a smashed economy, wild inflation, poverty, Soviet occupation and a reparations debt of \$300,-000,000. Politically the Soviet-supported Communist minority was thoroughly defeated by the conservative Small Landholders in the 1945 elections, yet it succeeded in taking over most of the key positions in the government. Controlling the police, the Communists waged a war of nerves against the Small Landholders, eventually forcing the resignation of Prime Minister Ferenc Nagy on May 30, 1947, and securing the appointment of a left-wing Small Landholder, Lajos Dinnyes, in his place. Then, shortly before the 1947 Peace Treaty became effective a national election was carried out in typical Communist manner on Aug. 31, with the Communists replacing the Small Landholders as the dominant party.

Two thousand years ago Hungary was part of the Roman provinces of Pannonia and Dacia on the empire's borders. In A.D. 894 it was invaded by the Magyars, who founded a kingdom. Christianity was accepted during the reign of Stephen I (St. Stephen) from 997 to 1083. The peak of Hungary's great period of medieval power came in 1342-82 under King Louis the Great (Louis I) of Anjou, whose dominions touched the Baltic, Black and Mediterranean Seas. When the Turks smashed a Hungarian army in 1526, western and northern Hungary accepted Hapsburg rule to escape Turkish occupation. Transylvania became independent under Hungarian princes. Intermittent war with the Turks was waged thereafter for a number of years.

After the suppression of the 1848 revolt against Hapsburg rule led by Louis Kossuth, the dual monarchy of Austria-Hungary was set up in 1867.

The dual monarchy was defeated with

the other Central Powers in World War I, and the new Hungary underwent hard times. First there was a short-lived Socialist Republic in 1918. The chaotic Communist rule of 1919 under Béla Kun ended with the Rumanians occupying Budapest on Aug. 4, 1919. When the Rumanians left, Admiral Nicholas Horthy entered the capital with a national army. The Treaty of Trianon of June 4, 1920, cost Hungary 75 percent of its land and more than 50 percent of its population. Meanwhile, the National Assembly had restored the legal continuity of the old monarchy, and on March 1, 1920, Admiral Horthy was elected regent. Former King Charles made two unsuccessful efforts to return to the throne in 1921.

After 1920 Hungary was, in effect, ruled by its great land owners, but the turn came in 1932 with the accession of General Julius de Gömbös, a pro-Fascist, as prime minister. Under Gömbös and his successors, Kaloman Daranyi in 1936 and Béla Imrédy in 1938, cooperation with Italy and Germany was Hungary's guiding principle. Hungary signed the anti-Comintern pact on Jan. 13, 1939, and the Three Power Pact of Germany, Italy and Japan on Nov. 20, 1940. As inducement and reward for these actions, Hungary got part of Slovakia and all of Ruthenia from Czechoslovakia in 1938 and 1939, and northern Transylvania from Rumania in 1940.

Following the German invasion of Russia on June 22, 1941, Hungary joined the attack against the U. S. S. R. But the war was not popular and Hungarian troops were almost entirely withdrawn from the eastern front by May, 1943. The government of Nicholas von Kállay was overthrown March 19, 1944, and German occupation troops set up a puppet government after Admiral Horthy's appeal for an armistice with advancing Soviet troops had resulted in his overthrow on Oct. 16. The German regime soon fled the capital, however, and on Dec. 23 a provisional government was formed in Soviet-occupied eastern Hungary. On Jan. 20, 1945, this government signed an armistice in Moscow under which all territory acquired both before and during the war was renounced; Hungary at the same time declared war on Germany.

In the national elections held Nov. 4, 1945, the conservative Small Landholders party won a sweeping victory, and Zoltán Tildy, its leader, later became prime minister.

On Feb. 1, 1946, the National Assembly approved a constitutional law abolishing the 1,000-year-old monarchy and establishing a republic. Up to that time, Admiral Horthy had been regent for a non-existent king. Tildy was immediately elected presi-

dent, and Ferenc Nagy replaced him as prime minister. The Assembly, which had been assigned the task of drawing up a new constitution, had the following make-up after the 1947 elections: Communists, 100(c); Small Landholders, 68(c); Socialists, 67(c); People's Democrats, 60; Hungarian Independence, 49; Peasants, 36(c); others, 31. (C refers to the Government coalition.)

PEACE TREATY OF 1947. The final peace treaty signed at Paris on Feb. 10, 1947, fixes Hungary's frontiers as they were on Feb. 1, 1938, except that a small bridgehead on the south bank of the Danube opposite Bratislava is ceded to Czechoslovakia. Hungary is to pay reparations of \$300,000,000 over a period of 8 years, \$200,000,000 to the Soviet Union and \$100,000,000 to Yugoslavia and Czechoslovakia. The treaty also provides that freedom of navigation on the Danube is to be preserved for nationals of all states.

The strength of Hungarian armed forces is fixed by the treaty as follows: army, 65,000, including frontier, anti-aircraft artillery and river flotilla personnel; air force, 90 planes with a personnel of 5,000. Soviet troops are permitted to maintain lines of communication through Hungary to Austria until a treaty with Austria takes effect. Soviet influence in the army is strong.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory for children between 6 and 12, and for three more years they attend continuation schools or courses, many of them specialized agricultural schools. Besides these continuation schools and a relatively large number of special schools, Hungary in 1939 had 8,103 elementary schools with 1,104,916 students. In the cities there were 418 primary schools with 105,466 students. High schools of different kinds numbered 263 with 79,435 students. There were four universities—at Budapest, Pécs, Szeged and Debrecen.

Under laws passed in 1927-28, optional social insurance was placed under the control of the national social insurance institute, which offered medical, hospital, old age and disability insurance. Insurance for farmers was made obligatory. The Land Reform Act issued in March, 1945, provided for the confiscation of all estates over 1,500 acres; about 9,000,000 acres were to be divided among some 500,000 families.

Agriculture is the basis of Hungarian economic life, engaging more than half the population. Of the total area, 63.6 percent can be cultivated and 17.9 percent is meadowland and rough pasture. Cereals grown in the fertile plains of the Danubian basin are the chief crops. Leading crops in 1945 were wheat (725,095 tons), corn (2,062,566 tons) and potatoes (1,863,761 tons). The cultivation of vines, fruit and garden produce is important; the famous Tokay

wine is produced on the southern slopes of the Hegyalja in the northeast. Wine production in 1946 was 101,498,000 U. S. gallons.

Horse-breeding is a traditionally important branch of agriculture. Hungarians have a great love for horses, and their excellent breeds were exported in large numbers before World War II. Livestock in 1945 included 368,844 horses, 1,008,700 cattle, 311,152 sheep and 1,145,504 swine.

The dominant industries are all based on agriculture, with flour milling in first place, followed by sugar refining, brewing and canning. The second group of industries make hardware and machinery. Most of the machine industry is concentrated in Budapest and Győr. Cotton leads the textile industry, especially in Budapest, which is also a center of woolen manufacturers. Hemp and flax weaving are important. Other forms of industry include brick making, glass working in the northern highlands, cement manufacture and the refining of oil at Budapest. In 1942 there were 5,600 manufacturing establishments with 530,000 workers.

Exports in 1939 totaled \$116,481,000 and imports \$94,732,000. Leading exports were wheat, livestock, poultry and other farm products. Germany, which accounted for about half the total trade in 1939, has now been replaced by the U. S. S. R. as Hungary's leading customer.

The focal point in the country's transportation system is the Danube River, navigable for 423 miles in Hungary. The nation's central location makes it the center of an important transit trade; its prewar river fleet was the largest on the Danube. Railroad mileage in 1945 totaled 4,848, highway mileage 15,159. Transportation facilities suffered heavy damage in the last part of the war, and more than 80 percent of railway equipment was destroyed.

The 1947 budget fixed expenditures at 4,420,700,000 forint (about \$376,000,000) and revenue at 4,045,000,000 forint. The last prewar budget, in 1939, balanced at \$256,821,913. The national debt on Dec. 31, 1943, totaled 6,501,000,000 pengős.

While Hungary generally is mineral-poor, it has an estimated 250,000,000 tons of bauxite—about 25 percent of the world's known reserves. Production in 1944 was estimated at 992,000 short tons. The coal output is of low quality and is insufficient to meet domestic needs. Output in 1943 was 1,513,017 tons. Lignite production in 1943 was 11,892,274 tons. Other minerals include iron ore, manganese and gold. Petroleum production in 1946 totaled about 4,800,000 barrels.

About 12 percent of Hungary is forested, but the products are of little importance.

TOPOGRAPHY AND CLIMATE. Most of

Hungary is a fertile, rolling plain lying east of the Danube, and drained by the Danube and the Tisza Rivers. In the extreme northwest is the Little Hungarian Plain. South of that area is Lake Balaton, 250 square miles, the largest lake of western and central Europe; to the west of it lies the Bakony Forest, part of an upland extension of the Alps, called the Hungarian Mittelgebirges. Entering Hungary in the northwest, the Danube flows south through the central plain. The Tisza, rising in the eastern Carpathians, also flows south through eastern Hungary.

Hungary's mean annual temperature ranges from 48° in the north to 52° in the south. Precipitation varies from 30 to 35 inches in the Bakony Forest to less than 15 inches in the east; most of the rain falls in May and June. High summer temperatures and a long autumn prevail.

Iceland (Republic)

(Ísland)

- Area: 39,709 square miles.*
- Population (census 1945): 130,356 (almost entirely Icelandic).
- Density per square mile: 3.3.
- President: Sveinn Björnsson.
- Prime Minister: Stefan Johann Stefansson.
- Principal city (est. 1945): Reykjavik, 46,000 (capital and only large town).
- Monetary unit: Króna.
- Languages: Icelandic, Danish.
- Religion: Evangelical Lutheran.
- *Including several off-shore islands.

HISTORY. Iceland, in the North Atlantic on the rim of the Arctic Circle, did not fight in World War II, but still it won and lost in the conflict. It won its complete independence from Denmark but lost its placid isolation when the United States and Great Britain moved in to prevent German seizure, and to establish air and naval bases. A new era then dawned for Iceland. Because of its strategic position on the great-circle air route between America and Europe, about halfway between New York and Moscow, the country assumed new significance in an air-minded world.

Iceland was first settled shortly before 900, mainly by Norse. A constitution drawn up about 930 created a form of democracy and provided for an Althing, or General Assembly, now the oldest legislative body in the world. In 1262-64, Iceland came under Norwegian-Danish rule. Through five centuries of intermittent plague, earthquake, famine and volcanic eruption, the stout Icelanders endured, and in 1874 they obtained their own constitution. In 1918 Denmark recognized Iceland as a separate state with unlimited sovereignty, but still nominally under the Danish king. On June

17, 1944, after a popular referendum, the Althing proclaimed Iceland a completely independent republic.

The British occupied Iceland in 1940, immediately after the German invasion of Denmark. In 1942, the United States took over the burden of protection. Iceland refused to abandon its neutrality in World War II, and thus forfeited charter membership in the United Nations, but it was cooperative with the Allies throughout. Since the end of the war, the country has been apathetic toward foreign bids for air bases and other rights.

GOVERNMENT. Constitutionally, the president is elected for four years by popular vote. President Björnsson was named to the office in 1944 by acclamation of the Althing and was re-elected in June, 1945, for the regular four-year term. Executive power resides in a Prime Minister, assisted in 1947 by a five-man coalition cabinet. The Althing is composed of two houses, one with 17 members and the other with 35; each has equal constitutional power. Iceland has no army or navy.

SOCIAL AND ECONOMIC CONDITIONS. Illiteracy is virtually unknown in Iceland. Education is compulsory from 7 to 14, and mobile schools are sent traveling through the sparsely settled areas. When the University of Iceland, established in 1911, needed new buildings in 1935, the government licensed it to conduct a national lottery to raise the funds. The high number of scholarships and the low tuition fees make higher education virtually free to any qualified applicant.

Iceland publishes more books, newspapers and magazines per capita than any country in the world. Its language, Icelandic, has no dialects and has changed little through the centuries. In addition, Danish is widely understood and spoken. The Evangelical Lutheran Church is state-supported, but there is complete religious freedom. A social insurance system set up in 1935 provides for accident, sickness and old age.

Approximately six-sevenths of Iceland is unproductive, and only one-fourth of one percent is under cultivation. With about 30 percent of the population engaged in farming, sheep raising is the most important branch of this industry. Hay, potatoes and turnips are the principal crops.

About one-sixth of the people are engaged in fishing, and fish and fish products make up the bulk of Iceland's exports. The annual catch averages about 350,000 tons (1944: 508,000 tons), and the total value of the industry was estimated in 1944 at about \$22,000,000. In normal years many British, German, French and Norwegian fishing craft visit Iceland's fisheries, which lead the world in cod and are important for herring, plaice and halibut.

In 1945, exports totaled 267,261,000 kr. and imports 319,755,000 kr.; 90 percent of the exports went to Britain, but about 65 percent of the imports were supplied by the U. S. and 21 percent by Britain. Fish and fish products accounted for 95 percent of the exports.

Iceland has no railways. Highways total 3,107 miles. In rural districts, most transportation is by horse-drawn cart. In 1944 the merchant marine totaled 435 vessels of 37,500 gross tons.

Expenditures for the calendar year 1946 were estimated at 122,419,711 kr. and revenue at 127,416,887 kr. The public debt was 68,207,000 kr. in 1945.

TOPOGRAPHY AND CLIMATE. Iceland, a bleak, volcanic island about the size of Kentucky, has maximum dimensions of 298 by 194 miles; it is mostly tableland, high, rugged and barren. It is one of the world's most volcanic regions. Mt. Hekla (4,747 ft.), near the southern coast, is the most notable of its volcanoes, many of which are still active and cause frequent earthquakes. Small fresh-water lakes are found throughout the island, and there are many natural oddities including hot springs, geysers, sulfur beds, canyons, waterfalls and swift rivers. More than 13 percent of the area is covered by snowfields and glaciers, and most of the people live in the 7 percent of the island comprising fertile coastlands. One-third of the much-indented, 3,730-mile coastline belongs to a peninsula to the northwest, joined to the mainland by an isthmus four miles wide. Vegetation is of the Arctic type, mostly stunted. Except for peat and fisheries, Iceland has no natural resources.

The Gulf Stream modifies Iceland's climate to make it much like that of southern Canada, though with longer winters and shorter summers. The mean annual temperature at Reykjavik is 39.4°, with January the coldest month (34.2°) and July the warmest (61.6°).

Iran (Kingdom)

Area: 634,413 square miles.

Population (est. 1940): 17,000,000 (Iranian, Kurdish, Azerbaijani).

Density per square mile: 26.7.

Ruler: Mohammed Riza Pahlavi.

Prime Minister: Ahmad Ghavam-es-Saltaneh.

Principal cities (est. 1944): Teheran, 800,000 (capital); (census 1940): Tabriz, 213,542 (capital, Azerbaijani), Isfahan, 204,598 (cotton, tobacco); Meshed, 176,471 (Moslem shrine); Shiraz, 129,000 (wine, sugar beets).

Monetary unit: Rial.

Languages: Iranian, Kurdish, Azerbaijani.

Religions: Moslem (Shiah), about 90%; Moslem (Sunnii), about 5%; Armenian; Jewish; Nestorian; Parsi.

HISTORY. Oil-rich Iran, roughly one-fifth the size of the United States, was called Persia before 1935. Its key location blocks the lower land gate to Asia, and also stands in the way of traditional Russian ambitions for access to the Indian Ocean. In modern times, Iran has drawn Big Power interest because of its rich oil deposits.

Iran's history is a long one of rising and falling dynasties. After periods of Assyrian, Median and Achaemenidian rule, Persia became a powerful empire under Cyrus the Great, reaching from the Indus to the Nile at its zenith in 525 B.C. It fell to Alexander in 331-30 B.C., to the Selucidae in 312-02 B.C., and to the Parthians about 130 B.C. A native Persian regime arose about A.D. 224, was weakened fighting the Turks, and fell to the Arabs in 637. In the 12th century the Mongols took their turn ruling Persia, and in the early 18th century the Turks and Russians occupied it. In modern times, Russia, Turkey, Britain, France, and, most recently, the United States, all have taken keen competitive interest in the country.

An Anglo-Russian convention of 1907 divided Iran into two spheres of influence. British attempts to impose a protectorate over all of Iran were defeated in 1919. On Feb. 26, 1921, General Riza Pahlavi seized the government and was elected hereditary shah in 1925. Subsequently he did much to modernize the country, and abolished all foreign extraterritorial rights.

Increased pro-Axis activity led to Anglo-Russian occupation of Iran in August, 1941, and deposition of the shah in favor of his son, Mohammed Riza Pahlavi.

In November, 1945, a Soviet-inspired autonomist movement won control of Azerbaijan, Iran's northwest province. To protect their advantage, the Russians kept troops in that area past the treaty evacuation date of March 2, 1946. The Iranians promptly protested this breach of agreement to the United Nations. The Russians evacuated their troops on May 6 but not before they had forced Iran to promise them oil concessions in the north.

Iranian troops reoccupied Azerbaijan in Dec., 1946, to clear the way for parliamentary elections which, held in Jan., 1947, resulted in a victory for Ghavam-es-Saltaneh's Government party.

Mohammed Riza Pahlavi, the ruler, was born Oct. 16, 1919, and was married on March 15, 1939, to Princess Fawzieh, eldest sister of King Farouk of Egypt. A daughter was born to them in 1940.

GOVERNMENT AND DEFENSE. Iran is a constitutional monarchy, and the shah has the usual powers of the head of a parliamentary state. Executive power is exercised by a cabinet headed by the prime minister, who is appointed by the shah and responsible to the Majlis (parliament).

Military service is compulsory; the initial training period is 2 years. The army, modernized and reorganized by Riza Pahlavi, father of the present shah, consisted of about 400,000 men in 1940. The air force has several hundred planes, and the navy several small craft in the Persian Gulf. There is also an American-trained police force of about 10,000.

SOCIAL AND ECONOMIC CONDITIONS. Education has made good progress in the last 25 years, supplanting the old and essentially religious system. In 1938 there were 8,381 schools with attendance of 457,236. A university was opened at Teheran in 1934. Illiteracy is high, though decreasing.

Most of the population is Moslem of the Shia sect. The Kurds, in the west central region, are of the Sunni sect.

Iran is predominantly agricultural. Large estates are numerous, and irrigation is common, especially on the central plateau. The principal crops are wheat (estimated production 1943: 1,267,645 tons) and barley (582,014 tons). Rice production, confined largely to the Caspian provinces, was estimated at 341,713 tons in 1943. Other crops include grapes, dates, apricots, tobacco, cotton, sesame, sugar beets and corn. There are extensive grazing lands. Wool production in 1943 was estimated at 13,200 tons; in 1947 there were 13,190,000 sheep.

Iran must still import many manufactured necessities, but several new factories were established by the government after 1925. These included 7 sugar beet plants (1945 output: 28,600 tons), rice mills, oil mills, textile factories, a cement factory, copper smelter, glycerine factory and small arms factory. The Chalus silk mill produces 1,000,000 yards or more a year. Both sugar and tobacco are government monopolies. The manufacture of carpets, for which Iran is famous, is the most valuable industry (exports 1944: 1,165 tons).

Iran's exports in 1944-45 totaled \$196,707,000, and imports \$125,820,000. Principal exports (excluding petroleum, which normally constitutes about 75 percent of the total) are cotton, wool, opium, rice, almonds and sheep casings. Leading imports are cotton piece goods, tea, sugar, drugs and chemicals.

In 1938, there were 8,700 miles of motorable roads, and during World War II Allied engineer troops improved several hundred miles. Railway mileage totals about 1,072. The principal line (870 mi.) connects Bandar Shahpur on the Persian Gulf with Bandar Shah on the Caspian Sea. More than 5,000,000 tons of supplies were sent to Russia by the trans-Iranian route during World War II. British Overseas Airways and Iranian State Airlines provide air service.

The ordinary budget (1944-45) was esti-

mated to balance at \$137,900,000. The public debt (1944) was \$76,925,000. Incomes from various monopolies and oil royalties are important sources of revenue.

Considerable mineral wealth exists, but only oil is exploited commercially. The principal field, near Shushar in the southwest, is worked by the Anglo-Iranian Oil Company, whose concession began in 1901 and runs to 1993. Royalties are paid to Iran on a tonnage basis. Production in 1945 was 18,886,000 short tons. A Russo-Iranian oil company, formed in April, 1946, has rights to explore for oil in the Caspian area.

The main forest belt on the northern Elburz slope supplies railroad ties, charcoal and firewood. Gums are the most valuable forest product. Extensive fisheries are worked both on the Persian Gulf and the Caspian Sea.

TOPOGRAPHY AND CLIMATE. Iran is, in general, a plateau averaging 4,000 feet of elevation. In addition, there are maritime lowlands along the Persian Gulf and the Caspian Sea. The Elburz Mountains in the north rise to 18,603 feet at Mt. Demavend. From northwest to southeast, the country is crossed by a desert 800 miles long and from 100 to 200 miles wide. Iran's only navigable river is the Karun in the southwest.

The central plateau is hot in summer and very cold in winter, but the Caspian area has a sub-tropical climate. Mean temperatures vary at Teheran from 35° in January to 85° in July (yearly average 62°); at Bushire, on the Persian Gulf, from 58° in January to 90° in July and August (average 75°). Rainfall is light everywhere except in the Elburz Mountains.

Iraq (Kingdom)

Area: 116,600 square miles.

Population (est. 1945): 4,541,746 (Arab, 75%; Kurdish, 15%; Iranian, 3.75%; others, 6.25%).

Density per square mile: 38.9.

Ruler: King Faisal II.

Regent: Crown Prince Abdul-Ilah.

Prime Minister: Salih Jabr.

Principal cities (est.): Baghdad, 400,000 (capital); Mosul, 260,000 (farming, oil); Basra, 180,000 (chief port); Karbala, 65,000 (Shiah shrine).

Monetary unit: Dinar.

Languages: Arabic, Kurdish.

Religions: Moslem (Shiah), 53%; Moslem (Sunni), 35%; Christian, 2.8%; Jewish, 2.5%; others, 6.7%.

HISTORY. Iraq, a triangle of mountains, desert and fertile river valley less than half the size of Texas, is bounded east by Iran, north by Turkey, west by Syria and Trans-Jordan, and south by Saudi Arabia. From earliest times it has been known as

Mesopotamia—the land between the rivers—for it embraces a large part of the alluvial plains of the Tigris and Euphrates.

An advanced civilization existed in Mesopotamia by 4000 B.C. Sometime after 2,000 B.C. it became the center of the ancient Babylonian and Assyrian empires. It was conquered by Cyrus the Great of Persia in 538 B.C., and by Alexander in 331 B.C. After an Arab conquest in A.D. 637-40, Baghdad became capital of the ruling caliphate. The country was cruelly pillaged by the Mongols in 1258, and during the 16th, 17th and 18th centuries was the object of repeated Turkish-Persian competition.

Nominal Turkish suzerainty imposed in 1638 was replaced by direct Turkish rule in 1831. In World War I an Anglo-Indian force occupied most of the country, and Britain was given a mandate over the area in 1920. The British recognized Iraq as a kingdom in 1922 and terminated the mandate in 1932, when Iraq was admitted to the League of Nations. In World War II, Iraq generally adhered to its 1930 treaty of alliance with Britain, but in 1941 British troops were compelled to put down a pro-Axis revolt led by Prime Minister Rashid Ali. Iraq became a charter member of the Arab League in March, 1945.

King Faisal II, born on May 2, 1935, succeeded his father, Ghazi I, who was killed in an automobile accident on April 4, 1939. The king's uncle, Abdul-Ilah, is regent.

GOVERNMENT AND DEFENSE. Under the 1924-25 constitution, Iraq is a hereditary monarchy with a two-house Parliament. The 20-member Senate is named by the king for eight years; the 115-member Chamber of Deputies is elected popularly for four years. Executive power is vested in a Council of Ministers, headed by the prime minister, whom the king appoints.

Military service is compulsory, with an initial training period of 1½ to 2 years. Army and air force strength in 1938 was 28,000. Both were trained and re-equipped by the British during World War II. The British-trained police force numbers about 17,600. The 1930 treaty gives Britain the right to keep troops in Iraq under certain conditions.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is free and nominally compulsory. Secondary education is neither free nor compulsory. In 1944-45 there were 822 state elementary schools with 89,124 pupils and 71 intermediate and secondary schools with 11,309 pupils. Thirteen colleges had a combined enrollment of 2,788. There are no universities.

The chief economic activity is agriculture, dependent upon irrigation and confined to the valleys of the Tigris and Euphrates. Iraq supplies about 80 percent of the world's dates (1943 exports: 81,000

tons). Chief among the cereal products are barley (1944: 496,000 short tons), wheat (1944: 385,000 short tons), rice, sorghum, maize and millet. Many fruits and some tobacco and cotton are grown. Grazing is the principal occupation of the many nomadic and seminomadic tribes. Livestock estimates in 1943 included 475,000 cattle and buffaloes, 6,000,000 sheep and 1,065,000 goats. Wool output averages about 6,000 tons annually.

Industry is still embryonic. Of approximately 100 manufacturing firms, the most important are those making brick, tile, woolen textiles, vegetable oils, soap, glass and cigarettes.

Exports in 1945, excluding oil, totaled \$50,590,006, and imports \$92,279,708. The United States was the main supplier (19%) and Britain, Syria and Palestine the leading customers. The chief exports are barley, dates, wool, hides and skins.

The only port for seagoing vessels is that of Basra, located on the Shatt al-Arab River near the head of the Persian Gulf. River vessels plying the Tigris between Basra and Baghdad have tonnage of more than 60,000. There are about 4,000 miles of improved and unimproved roads. Iraq State Railways, the only rail line, operates three lines totaling 966 miles. There is an airport and seaplane base at Basra.

Oil production centers at the Baba Gur-gur fields near Kirkuk, operated on behalf of an international group by the British-managed Iraq Petroleum Company. The oil is piped to Haifa in Palestine and Tripoli in Lebanon. The other field is operated by the Kanaqin Oil Company, a subsidiary of the Anglo-Iranian Oil Company, and produces only for local consumption. Total Iraqi output in 1946 was 4,674,262 long tons.

Ordinary revenue (1945-46) was estimated at 22,158,540 dinars, and ordinary expenditures at 22,777,386 dinars. The capital works budget, based on oil royalties, usually balances the ordinary budget. There is no external debt.

TOPOGRAPHY AND CLIMATE. Iraq has arid desertland west of the Euphrates, a broad central valley between the Euphrates and Tigris, and mountains in the north-east. The fertile lower valley is formed by the delta of the two rivers, which join about 120 miles from the head of the Persian Gulf. The coast line on the gulf is only 26 miles long.

Iraq's climate, generally, runs to great extremes—long hot summers and short cold winters. The area on the Persian Gulf is one of the hottest places in the world. Average temperature at Baghdad is 49° in January and 92° in July and August. Rainfall in Iraq is light, ranging from about 15 inches in the north to almost none on the desert. Sand and dust storms are frequent.

Italy (Republic)

(Repubblica d'Italia)

Area (Jan. 1947): 119,733 square miles.
Population (est. 1946): 45,769,000 (predominantly Italian).

Density per square mile: 382.4.

President: Enrico de Nicola (provisional).

Premier: Alcide de Gasperi.

Principal cities (census 1936): Rome, 1,562,580 (capital); Milan, 921,515 (leading financial, industrial center); Naples, 739,349 (seaport); Turin, 608,211 (auto works); Genoa, 512,313 (seaport); Palermo, 339,497 (Sicilian seaport).

Monetary unit: Lira.

Religions: Roman Catholic, 99.6%; others (Protestant, Orthodox, Jewish), .4%.

HISTORY. Pushed into a disastrous alliance with Germany by Benito Mussolini, Italy became a German satellite which suffered military, naval and territorial reverses on all sides during World War II. A co-belligerent during the last two years of the war, the nation emerged from the conflict torn by economic chaos and political dissension. The settlement of the constitutional question in favor of a republic had a stabilizing influence, but the severe terms of the 1947 peace treaty were a serious setback to a country still divided between forces of right and left.

Italy, about the size of New Mexico but long and narrow in shape, did not exist as a unified country until 1870. Until A.D. 476, when the German Odoacer became head of the Roman Empire in the west, the history of Italy was largely the history of Rome. From A.D. 800 on, the Holy Roman Emperors, the Popes, Normans, Lombards and Saracens all vied for control over various segments of the Italian peninsula. Numerous city states, such as Venice and Genoa, and many small principalities flourished in the late Middle Ages.

In 1713, after the War of the Spanish Succession, Milan, Naples and Sardinia were handed over to Austria, but the Hapsburg influence on the peninsula was interrupted for a short time after 1800 when Italy was unified by Napoleon, who crowned himself King of Italy on May 26, 1805. After the Congress of Vienna in 1815, Austria continued to be the dominant power in Italy.

The movement for national unity began in the middle 19th century, staged by the "Young Italy" group headed by Giuseppe Mazzini. In 1858 Count Cavour, prime minister under King Victor Emmanuel II of Sardinia, secured the aid of Napoleon III of France in unifying Italy. After French and Sardinian forces had defeated the Austrians in 1859, Lombardy was annexed to Sardinia, and by the time the first Italian parliament opened at Turin in Feb., 1861, all Italy was represented except Venetia, held by Austria, and Rome, which was

the territory of the Pope. On February 18, 1861, Victor Emmanuel II was proclaimed King of united Italy.

In 1866 Italy sided with Prussia against Austria and received Venetia; Rome was seized in 1870. In 1882 the young nation entered into the Triple Alliance with Austria and Germany. After war with Turkey in 1911-12, the Italians were awarded Tripoli in North Africa and the Dodecanese islands in the Aegean Sea.

Italy denounced the Triple Alliance on May 3, 1915, and declared war on Austria on May 24. By the treaty of St. Germain, on Sept. 10, 1919, the south Tirol and the Istrian peninsula were awarded to Italy.

In the years immediately following World War I, Italy was a virtual battleground between the Socialists and Benito Mussolini's new Fascist movement. The weak government was powerless to maintain order as the two sides fought for power. Finally, on Oct. 30, 1922, the Fascists staged their "March on Rome" and took over the government. Mussolini was named premier by King Victor Emmanuel III. Il Duce and his Fascist Grand Council soon made Italy into a corporate state, with himself as dictator.

In 1935-36 Italy successfully invaded, conquered and annexed Ethiopia, despite the complaints of the League of Nations and economic sanctions.

On November 6, 1937, Italy joined the German-Japanese anti-Comintern pact and on December 11, withdrew from the League of Nations. The Rome-Berlin Axis was converted into a full military alliance on May 22, 1939. Meanwhile, Italian troops had seized Albania in April, 1939.

WORLD WAR II. On June 10, 1940, Mussolini announced a declaration of war against France (already in the throes of defeat) and Britain. Italian troops were able to advance only a few miles into France before the Armistice was concluded on June 24, under which Italy annexed a small strip of France. On October 28, 1940, Italian forces invaded Greece from Albania, but were driven back by the Greeks, who held a third of Albania by the time the Germans launched their Balkan campaign on April 6, 1941. Italy subsequently occupied parts of Yugoslavia and Greece. Following the German capitulation in North Africa and the fall of Sicily, Mussolini was ousted on July 25, 1943, and Marshal Pietro Badoglio formed a new government. On September 3, 1943, the date of the invasion of the Italian mainland by Allied forces, a military armistice was signed between General Eisenhower and Badoglio, and the legislative and administrative activities of the government were made subject to the approval of an Allied Commission.

On June 9, 1944, five days after the Allies entered Rome, Badoglio was succeeded as premier by Ivanoe Bonomi, a Socialist, who formed a coalition cabinet. The government was recognized by the Allies as the *de facto* government of Italy on October 25, but only as a co-belligerent, not as an ally. Later it was given full legislative powers and the right to resume diplomatic relations.

When German resistance crumbled in northern Italy, the partisan Committee of National Liberation of North Italy (CLNAI) quickly liquidated the puppet fascist state which Mussolini had formed there. Mussolini was captured and executed on April 28, 1945. On June 12, Bonomi resigned and was succeeded by Ferruccio Parri, a former underground leader in northern Italy. Premier Parri resigned on Nov. 24 and was succeeded by Alcide de Gasperi, a Christian Democrat.

After the institution of the republic, De Gasperi formed another coalition cabinet of Christian Democrats, Socialists, Communists and independents on July 13, 1946, and a third cabinet on Feb. 2, 1947, following a schism in the Socialist party caused by the Socialist-Communist unity of action pact signed in Oct., 1946. His fourth cabinet, formed in June, 1947, contained only Christian Democrats and independents.

GOVERNMENT. The Italian people voted in favor of the dissolution of the monarchy and the formation of a republic in a plebiscite held June 3, 1946. Of the total of 24,935,343 ballots cast, 12,717,923 were for a republic, 10,719,284 for the monarchy and 1,498,136 void. King Humbert II, who had succeeded his father, Victor Emmanuel III, on May 9, went into exile in Portugal shortly thereafter. Pending general elections, the republic is headed by an Assembly-elected provisional president who exercises the usual powers of the head of a parliamentary state. The Government is administered by the premier and his cabinet, who must enjoy the confidence of the Constituent Assembly. The latter body is to draw up a constitution for the new state.

The Constituent Assembly, elected in June, 1946, has 556 members, of whom 207 are Christian Democrat, 115 Socialist, 104 Communist, 41 Democratic Union, 30 *Uomo Qualunque* (a new party often accused of neo-fascism), 22 Republican, 16 Monarchist Bloc, 7 Actionist and 13 other parties. About 40 of the 115 Socialists seceded from the Socialist party in Feb., 1947, and formed a new group—the Socialist Workers party.

PEACE TREATY OF 1947. The peace treaty signed at Paris on Feb. 10, 1947, requires Italian renunciation of all claims in Ethiopia and Greece, the cession of the Dode-

canese to Greece, and of five small Alpine areas to France. In addition, the major part of the Istrian peninsula, including Fiume and Pola, goes to Yugoslavia. The Free Territory of Trieste has been carved out of the area to the west of the new Yugoslav frontier.

Italy is to pay reparations of \$100,000,000 in kind over a seven-year period to the Soviet Union, \$125,000,000 to Yugoslavia, \$105,000,000 to Greece, \$25,000,000 to Ethiopia and \$5,000,000 to Albania. She is also to make two-thirds restitution for wartime damage to Allied property in Italy.

DEFENSE. The 1947 treaty requires Italy to reduce the strength of her army to 250,000 men (including *carabinieri*), the navy to 25,000 (including naval air arm) and the air force to 25,000 (with 350 planes). The fleet is to be reduced to 2 battleships, 4 cruisers, 20 destroyers and large torpedo boats, plus smaller craft. Major war vessels placed at the disposal of the Big Four include 3 battleships, 5 cruisers, 8 submarines and 13 destroyers and large torpedo boats. Extensive areas along Italy's borders and in the outlying islands are to be demilitarized. Anglo-U. S. troops, numbering more than 50,000 in mid-1947, were to be withdrawn under the treaty terms by Dec. 15, 1947.

EDUCATION. Elementary education is free and compulsory from 6 to 14. Governmental and private elementary schools in 1941-42 numbered 139,571 with 5,110,328 pupils. Governmental and other secondary schools in the same academic year numbered 5,136 with 556,260 students. In 1942-43 there were 29 royal universities and institutes and 6 private universities and institutes with a total of 164,853 students. The University of Rome had 14,210 students in 1939; Naples had 12,289 and Milan 7,913.

RELIGION. Although the country is predominantly Roman Catholic, religious freedom is permitted. Catholic religious teaching is given in all elementary and intermediate schools. Relations with the Church are regulated by the treaty with the Holy See of Feb. 11, 1929, which established the temporal power of the Pope over Vatican City.

AGRICULTURE. Agriculture, the most important branch of Italy's economy, engages more than a third of the population. It is extremely diversified; differences of altitude, soil and climate allow the production of all European crops from rye to rice, from apples to oranges, and from hemp to cotton. Approximately 70,000,000 acres are productive. Of this area, 25 percent is devoted to cereals, 30 percent to forage and pasture, 3.5 percent to vines and 3 percent to olive trees. Italy ranks next to France in wine production (average 1931-42: 1,024,000,000 gal.; 1946: 742,259,467 gal.) and

next to Spain in olive oil production. The silk industry is centered in northern Italy and along the eastern coast. Production of silk cocoons in 1946 was 22,500 short tons, slightly above the 1938 figure. The Italian climate and soil are well suited to fruit growing.

Estimated crop production for 1946 (1938 figures in parentheses) was as follows (in short tons): wheat, 6,625,098 (8,919,591); oats, 509,011 (693,457); barley, 256,727 (273,150); rye, 121,966 (152,228); sugar beets, 2,550,000 (3,586,113). The reduced figures for 1946 reflect the unsettled economic conditions; they were, however, considerably larger than the crop yields for 1945.

Livestock and dairy farming are important in Italy. Of the 50-odd varieties of Italian cheese, the best known are the hard parmesan and pecorino (the latter made from ewe's milk) and the soft *bel paese* and *gorgonzola*.

Before World War II the fascist government carried on a wide land reclamation program, mostly in Emilia, Apulia, and the Venetian provinces.

INDUSTRY. Prior to World War II, there were approximately 730,000 industrial establishments in Italy, of which more than 1,000 employed at least 250 workers each. In 1940, approximately 3,825,000 workers were employed in industry. While a large proportion of small and medium sized concerns were common in industry before World War II, there was a growing tendency, fostered by the nature of the corporate state, toward industrial concentration. The textile industry, largest and most important, ordinarily supplied most of the home markets and left a large margin for export. It made rapid recovery after World War II, accounting for nearly half of Italian exports in 1946. The metal industries are handicapped by lack of coal and of sufficient iron ore reserves. The chemical, clothing and food industries are also important.

TRADE. Exports in 1946 totaled 54,530,000,-000 lire and imports, 84,220,000,000 lire. Exports (in millions of lire) comprised finished industrial products (23,280), industrial raw materials (4,300), semi-finished industrial products (15,020), and food and cattle (11,930). Imports were divided among industrial raw materials (40,-710), food and cattle (27,290), semi-finished products (8,610) and finished products (7,600).

NATURAL RESOURCES. Italy is ordinarily the world's largest producer of mercury, although Spain took first place in 1944-45; it is also an important producer of sulfur. The nation lacks, however, the staple minerals of coal, oil and iron, and is forced to import them. Building stone, particularly marble, is plentiful. In the south Tirol and

the central Apennines, Italy has abundant water power.

Less than 20 percent of Italy's area is forested. Principal products are soft and hard timber, charcoal and cork. The fishing industry does not fill domestic needs. Coral and sponges are marketed.

COMMUNICATIONS. The merchant marine in 1945 totaled only 500,000 gross tons as opposed to a total of more than 2,000,000 tons in 1939. On April 1, 1947, 78 vessels of 163,917 tons were under construction in Italian yards. There are more than 150 seaports, of which the principal are Genoa, Venice, Savona, Naples and Leghorn. Coastwise traffic is particularly important because of difficult land communications. State railways in operation in 1946 totaled 9,284 miles and private lines (1944) 3,096 miles. Equipment in 1945 was less than 30 percent of prewar figures. Highways in 1940 totaled 126,830 miles, of which about 10 percent were State roads.

FINANCE. The monetary unit is the lira; official rate 100 to the U. S. dollar. Estimated revenue for the fiscal year 1946 was \$1,160,000,000; estimated expenditures \$1,826,000,000. The public internal debt (Jan. 31, 1946) was \$9,561,990,000.

TOPOGRAPHY. Approximately 600 of boot-shaped Italy's 708 miles of length are in the long peninsula that projects into the Mediterranean from the fertile basin of the Po River. The Apennines, branching off from the Alps between Nice and Genoa, form the peninsula's backbone, and rise to a maximum height of 9,560 feet at the Gran Sasso d'Italia (Corno). The Alps are Italy's northern boundary.

Several islands form part of Italy. Sicily, 9,926 square miles, lies off the toe of the boot, across the Strait of Messina, with a steep and rock-bound northern coast and gentler slopes to the sea in the west and south. Mt. Etna, an active volcano, rises to 10,741 feet, and most of Sicily is more than 500 feet in elevation. Sixty-two miles southwest of Sicily lies Pantelleria, 45 square miles, and south of that are Lampedusa and Linosa. Sardinia, 9,301 square miles, just south of Corsica and about 125 miles west of the nearest Italian mainland, is largely mountainous, stony and unproductive.

Italy has many northern lakes, lying below the snow-covered peaks of the Alps. The largest are Garda (143 sq. mi.), Maggiore (83 sq. mi.) and Como (55 sq. mi.). The Po, the principal river, rises in the Alps on Italy's western border and flows across the Lombard plain into the Adriatic. The Arno and Tiber Rivers, rising in the Apennines, flow generally westward. Elsewhere are hundreds of short streams.

CLIMATE. Italy's climate is variable. The Italian Riviera along the Gulf of Genoa is

subtropical and highly favored by tourists. The winters in the high Apennines are cold and bitter. The western slope of peninsular Italy is warmer than the eastern side, and the Po basin in the north has cold winters and very hot summers. Sicily basks in the warm and equable Mediterranean climate.

In Rome, December through February are the coldest months (average 47°), and July and August the warmest (75°). There is an abundance of sunshine.

FORMER ITALIAN COLONIAL EMPIRE

Country	Area, sq. mi.	Population (est. 1940)
AFRICA		
Libya	679,183	911,000
Eritrea	89,274	688,000
Italian Somaliland	270,972	1,079,000
ASIA		
Dodecanese	1,035	122,000*

*Est. 1939.

The 1947 treaty contains a renunciation by Italy of all right and title to her African possessions. These territories are to remain under British military administration pending their final disposal, to be determined jointly by the U. S., British, French and Soviet governments, by Sept. 15, 1948. In the event of disagreement, the question of disposition is to be referred to the U. N.

LIBYA—Former Status: part of Metropolitan Italy except Libyan Sahara (whole area now under British military government).

Capital: Tripoli (pop. 1938: 108,240).

Agricultural products: barley, olive oil, wheat, figs, date palms, tobacco.

Mineral: salt.

Sea products: sponge, tuna.

Libya, lying along the north coast of Africa between Tunisia and Egypt, was a part of the Turkish dominions from the 16th century until 1911. Following the outbreak of hostilities between Italy and Turkey in the latter year, Italian troops occupied Tripoli; Italian sovereignty was recognized the next year by the Treaty of Ouchy. In 1934 the area was organized into four provinces—Bengasi, Derna, Misurata and Tripolitania—which were incorporated in 1939 into Metropolitan Italy, and a military territory in the south, Libyan Sahara (465,362 sq. mi.). Libya was the scene of much desert fighting during World War II. After the fall of Tripoli on Jan. 23, 1943, it came under British military occupation and government.

The area has three natural divisions from the coast inland—the Mediterranean coastland, the only region suitable for agriculture; the sub-desert, and the desert. About 10 percent of the population is Italian, the remainder native, mostly Moslem. The Senussi sect, which opposed Italian rule

in Cyrenaica during World War I, exercises a strong position among the remoter oases in the hinterland. Railroads total 242 miles. Winters are cool and summers warm along the coast, and hotter in the interior. Bengasi has an average temperature of 55° in January and 78° in July.

ITALIAN SOMALILAND—Former Status: Italian colony (now under British military occupation).

Capital: Mogadiscio (population: 45,000).

Agricultural products: dressed skins, cattle, sugar, cotton, cottonseed oil, fruits, bananas.

Forest products: gum, resin, kapok.

Mineral: tin.

Italian Somaliland, extending along Africa's east coast from the Gulf of Aden south to Kenya, fell within the Italian sphere of influence by treaties with the Somali sultans in 1889 and by agreements with Britain in 1905 and 1924, with the sultan of Zanzibar in 1905, and with Ethiopia in 1907. After the conquest of Ethiopia the area, together with part of Ethiopia, was incorporated into Italian East Africa. It was occupied in Feb., 1941, by British Imperial troops and, reduced to its pre-1936 area, has since been under British military administration.

The overwhelming majority of the population are Somalis who belong to the Sunni sect of Islam; they are a pastoral, nomadic people whose livelihood depends on cattle, sheep and camels. However, the Italians established plantations in the south, especially in the fertile Juba region. The colony was far from self-supporting, requiring heavy Italian subsidy. The climate is torrid, especially along the coast.

ERITREA—Former Status: Italian colony (now under British occupation).

Capital: Asmara (population: 85,000).

Chief exports: coffee, salt.

Agricultural products: coffee, barley, tobacco, sesame, hides, skins.

Minerals: gold, salt, potassium salts.

Sea product: pearls.

The first Italian inroad into Eritrea came in 1870 when the port of Assab and adjacent territory were bought from a native sultan; with British approval, Italian troops occupied Massaua in 1885. By a decree of Jan. 1, 1890, Italian possessions along the Red Sea were united into the colony of Eritrea. In 1936 Eritrea, with parts of Ethiopia, became a part of Italian East Africa. British and Indian troops captured Asmara on Apr. 1, 1941, and Massaua a week later; the area, reduced to its pre-1936 borders, has since been under British military occupation.

The principal native elements are the Ethiopians and Tigrés, who have close ethnic, linguistic and religious ties with peoples across the border in Ethiopia. Italians in 1944 totaled 48,718. Irrigation is essential in the low-lying coastal plains, and

agriculture is practiced largely on the interior plateau (average elevation: 6,500 ft.) where the climate is suitable for European settlement. The pastoral industry engages most of the natives.

Along the coast, the climate is excessively hot and humid, especially in June, September and October; mean annual temperature at Massaua is 86°; the thermometer often rises to 120° in summer.

DODECANESE—Former Status: Italian colony ceded to Greece by Treaty of Paris, 1947).

Capital: Rhodes (population: 27,466).

Agricultural products: wine, olive oil, tobacco, hides, skins.

Sea product: sponges.

The Dodecanese, a group of 13 islands in the Aegean Sea near the coast of Asia Minor, were part of the Ottoman Empire prior to Italian occupation in 1912. Turkey recognized full Italian sovereignty by the Treaty of Lausanne in 1923. At the end of World War II, the German garrison surrendered to an Anglo-Greek force on May 9, 1945.

Fully 85 percent of the population is Greek. The islands are of slight economic value with the exception of the sponge-fishing industry. The most important island is Rhodes (Rodi).

Japan (Empire) (Nippon)

Area: 147,573 square miles.*

Population (census 1946): 73,114,059.*

Density per square mile: 495.7.

Supreme Commander for the Allied Powers: General of the Army Douglas MacArthur (U. S. A.).

Ruler: Emperor Hirohito.

Premier: Tetsu Katayama.

Principal cities (census 1940): Tokyo, 6,778,044 (capital, financial, manufacturing center); Osaka, 3,252,340 (chief industrial center); Nagoya, 1,328,084 (machinery, textiles); Kyoto, 1,089,726 (manufacturing); Yokohama, 968,091 (seaport, silk export center); Kobe, 967,234 (seaport, shipbuilding); Hiroshima, 343,968 (seaport, textiles); Fukuoka, 306,673 (seaport, textiles).

Monetary unit: Yen.

Language: Japanese.

Religions (1938): Buddhism, 60%; Shintoism, 18%; Protestant (215,166); Roman Catholic (18,856).

*Japan proper.

HISTORY. Japan, first of the aggressor nations which ultimately bound themselves to the Axis to wage World War II, was also the first of the Axis partners to make semblance of recovery after utter defeat. Although stripped of her empire and under military occupation, Japan by 1947 had made some progress toward restoring its economy, and was enjoying a measure of political stability unknown to her wartime allies.

Japan's early history is indistinguishable from mythology. One series of legends attributes the creation of Japan to the sun goddess, from whom the later emperors were allegedly descended. The first of them was Jimmu Tennō, supposed to have ascended the throne on Feb. 11, 660 B.C.

Recorded Japanese history begins with the first contact with China in the 5th century A.D. Japan was then divided into strong feudal states, all nominally under the emperor, but with real power often held by a court minister or clan. In 1185 Yoritomo, chief of the Minamoto clan, was designated shogun (generalissimo) with the actual administration of the islands under his control. Clans came and went, but a dual government system—shogun and emperor—persisted till 1867.

First contact with the West came about 1542, when a Portuguese ship off course arrived in Japanese waters. Portuguese traders, Jesuit missionaries, and Spanish, Dutch and English traders followed. Suspicious of Christianity and Portuguese support of a local Japanese revolt, the shoguns restricted all foreigners in 1636-38 except the Dutch, who were confined to Nagasaki. Western attempts to renew trading relations failed until 1853, when Commodore Matthew Perry sailed an American fleet into Tokyo Bay with a letter from President Fillmore. A U. S. commercial treaty signed in 1859 was followed by similar pacts with Britain, France, the Netherlands and Russia, and the opening to foreign residents of the ports of Yokohama, Nagasaki and Hakodate.

Japan now quickly made the transition from a medieval to a modern power. Feudalism was abolished and industrialization was speeded. An imperial army was established with conscription. The shogun system was abolished in 1867 by Emperor Meiji, and parliamentary government was established in 1889. After a brief war with China in 1894-95, Japan acquired Formosa (Taiwan), the Pescadores islands, and part of southern Manchuria. China also recognized the independence of Korea (Chosen), which Japan later annexed (1910).

In 1904-05 the new Japan won prestige by defeating Russia in the Russo-Japanese War, gaining the territory of southern Sakhalin (Karafuto) and Russia's port and rail rights in Manchuria. In World War I Japan, which took a negligible part in military operations, grabbed Germany's Pacific islands and leased areas in China. The Treaty of Versailles then awarded her a mandate over the islands.

At the Washington Conference of 1921-22, Japan agreed to respect Chinese national integrity. The series of Japanese aggressions which was to lead to the nation's downfall began in 1931 with the invasion of Manchuria. The following year, Japan

set up this area as a puppet state, "Manchukuo", under Emperor Henry Pu-Yi, last of China's Manchu dynasty. From then on Japanese policy was attuned to the saber rattling of her militarists. On Nov. 25, 1936, Japan joined the Axis by signing the anti-Comintern pact. The invasion of China came the next year, and the Pearl Harbor attack was unleashed on Dec. 7, 1941.

For many months after Pearl Harbor, the Japanese Army and Navy enjoyed spectacular success, but by the end of 1942 the tide had begun to turn. Three years later the dropping of the world's first atomic bomb in combat on Hiroshima, followed by a second one on Nagasaki, knocked Japan swiftly into a surrender that already had been inevitable.

The formal surrender took place Sept. 2, 1945, aboard the battleship *Missouri* in Tokyo Bay. Southern Sakhalin and the Kurile Islands reverted to Russia, and Formosa (Taiwan) and Manchuria to China. The Pacific islands remained under U. S. occupation.

Soon after the surrender Japan began the process of democratizing its political, social and economic structure under Allied supervision. Early in 1946 the Supreme Allied Commander, General of the Army Douglas MacArthur, ordered Baron Shidehara's cabinet to carry out a series of political purges. Elections held on April 10, 1946 brought 72.1% of the electorate to the polls, and resulted in a conservative victory. A Liberal, Shigeru Yoshida, took over the premiership on May 22, but his conservative policies brought both Allied and internal dissatisfaction.

Following the Socialists' victory in the elections of April 20, 1947, Japan's first Socialist premier, Tetsu Katayama, a lifelong Christian, formed a cabinet composed of Socialists, Democrats and members of the People's Cooperative Party on May 31, 1947. In July, 1947, the U. S. proposed an early conference of the eleven members of the Far Eastern Commission to consider a peace settlement for Japan. The proposal was accepted by all the member nations except the U. S. S. R., which insisted that the treaty be drafted by the four-power Council of Foreign Ministers (China replacing France), thus following the precedent set by the Italian and Axis satellite treaties.

ALLIED OCCUPATION GOVERNMENT. General MacArthur was appointed Supreme Commander for the Allied Powers (SCAP) on Aug. 14, 1945. The surrender terms provided that Japan must accept the provisions of the Potsdam Declaration (July 26, 1945) and that "the authority of the Emperor and the Japanese Government to rule the state shall be subject to SCAP,

who shall take such steps as he deems proper to effectuate the surrender terms."

The Far Eastern Commission—composed of Australian, Canadian, Chinese, British, French, Indian, Dutch, New Zealand, Philippine, Soviet and U. S. delegates—is empowered to formulate the policies, principles and standards by which the fulfillment of Japanese obligations under the surrender terms may be accomplished, and to review directives issued to SCAP or any action taken by SCAP within the purview of the Commission's jurisdiction. The Allied Council for Japan—composed of SCAP, who is the U. S. member, a Chinese and a Soviet member and a member representing jointly the United Kingdom, Australia, New Zealand and India—advises and consults with SCAP in carrying out the surrender terms and policies approved by the Commission.

By the end of the first year of occupation, General MacArthur reported that Japan's armed forces had been completely demobilized, her war-making capacity destroyed, her business monopolies broken up and democratic forms of government instituted.

RULER. Emperor Hirohito, born April 29, 1901, succeeded his father, Yoshihito, on Dec. 25, 1926. He was married on Jan. 26, 1924, to Princess Nagako, born in 1903. To them were born two sons, Crown Prince Akihito (Dec. 23, 1933) and Prince Masahito (Nov. 28, 1935), and 5 daughters. Succession is in the male line only.

NATIONAL GOVERNMENT. The new constitution, effective May 3, 1947, made drastic changes in Japan's political system. The Emperor retains only ceremonial functions, and executive power is vested in the cabinet, headed by the premier and collectively responsible to the Diet. Law-making power is vested solely in the Diet, composed of two houses—the House of Representatives, popularly elected for four-year terms, and the House of Councillors, with 250 members elected for six-year terms. A bill of rights guarantees certain basic liberties. Women are enfranchised for the first time. Sovereignty, formerly vested in the Emperor, now is vested in the people, and the House of Representatives can override the veto of the House of Councillors by a two-thirds vote.

The April 1947 elections distributed the 466 seats in the House of Representatives as follows: Socialists 143, Liberals 133, Democrats (former Progressives) 126, People's Cooperative Party 31, Independents 29 and Communists 4.

DEFENSE. The War, Navy, and Munitions Ministries and the Army and Navy General Staffs have been abolished, and the army and navy are completely demobilized. The few remaining major ships in the navy

have been sunk, and the smaller ships divided among the Allies. Occupation forces in mid-1947 included an estimated 130,000 to 150,000 U. S., and 20,000 to 25,000 British Commonwealth troops. The new Constitution contains a renunciation of the right to maintain armed forces.

EDUCATION. In 1944-45 Japan had 34,610 primary schools with 15,530,272 students; 4,175 secondary, middle and vocational schools with 2,276,227 students; 493 normal and "higher" schools and colleges with 327,363 students; and 49 universities with 64,478 students. The educational system was virtually at a standstill at the time of the surrender, and prompt action was taken by occupation authorities to rehabilitate it under directives designed to purge the curriculum and teaching staff of militaristic and chauvinistic influences.

POPULATION. The population of Japan proper was approximately doubled from 1870 to 1935. Density of population is exceeded only by England and Wales, the Netherlands, Belgium and Java. The home islands are now more overcrowded than ever. As of June 30, 1947, SCAP reported that 5,551,634 Japanese civilians and military personnel had been repatriated from all areas, and that nearly a million others awaited repatriation from Soviet-controlled areas.

AGRICULTURE. Japan is a land of small rice and silk farms and, except in Hokkaido, the northernmost island, there is almost no large-scale farming and animal husbandry. The average holding is less than three acres. Double cropping makes self-sufficiency possible, but on a very low level of subsistence. Crop production in 1946 was considerably below prewar figures, and food shortages were still critical.

MAJOR AGRICULTURAL CROPS, 1946-47 (Preliminary estimate)

Crop	Acres	Tons
Rice	7,350,000*	9,800,000
Barley	2,100,000*	817,000
Wheat	1,527,000†	659,000
Potatoes	520,000†	1,675,000
Fruit	367,000*	922,000

*1945. †1946.

Japan is the world's largest producer of natural silk, with about 30 percent of all farm households engaged in cocoon tending in 1939. Output for 1946 was 75,306 tons.

INDUSTRY. Japan's light as well as heavy industries continued to operate below basic requirements in 1946-47, largely because of labor troubles and deterioration in equipment. Installed cotton spindleage in Feb., 1946, was only 2,150,000, as compared with 11,434,000 in 1940. Monthly steel ingot and casting production in mid-1946 was about 54,000 tons as against 675,-

000 in 1943; production of pig iron, 14,000 as against 330,000 tons. The metallurgical and textile industries ordinarily are the largest in Japan, followed by machinery, chemicals and food. The cottage industry is prominent in spinning and weaving of silk and cotton and in the manufacture of bicycle parts.

After 1931 a considerable expansion took place in the heavy industries—metal, machine-building and chemical—which were adaptable to war purposes. State control was intensified at the same time.

Directives issued by SCAP in 1945 effected the dissolution of huge interlocking monopolies (*Zaibatsu*) in business and finance; approximately 1,200 firms were involved. A directive issued Aug. 24, 1946, ordered the seizure for reparations of 505 of the largest industrial plants, mostly privately-owned, which accounted for 95 percent of the Japanese pig iron output, 88 percent of the steel ingots, 50 percent of machine tools and 87 percent of shipbuilding facilities. Shipbuilding capacity was to be reduced to 650,000 gross tons annually (from 1,900,000 tons), steel ingots to 3,500,000 metric tons (from 12,000,000 tons), pig iron to 2,000,000 tons (3,000,000 tons in 1939) and sulfuric acid to 3,930,000 tons. Government-owned arms plants and naval yards were seized earlier in the year.

Removal of equipment from Japan has been delayed by Allied inability to agree on the allocation of reparations shares to the claimant countries.

TRADE. Before World War II, Japan ranked fifth in world trade. Exports in 1939 totaled \$928,533,000. Imports totaled \$757,775,000, of which 34.4 percent came from the U. S. Foreign trade was resumed on a small scale under strict Allied control in 1946, and in 1947 a program of limited private trade was initiated. Imports were largely food, cotton and oil; exports consisted of small stocks of silk, other raw materials and a few manufactures.

COMMUNICATIONS. On Dec. 31, 1939, Japan had 4,084 ships of more than 100 tons, with an aggregate tonnage of 5,728,779. Before World War II the merchant marine carried almost 80 percent of the foreign trade and was surpassed only by those of the U. S. and Britain. War-time losses were enormous; the tonnage was estimated at 1,250,000 at the time of surrender in Sept., 1945.

Railway mileage in 1946 was 16,993. The highway system totaled 534,424 miles.

FINANCE. World War II left Japan with a staggering public debt, mounting inflation and a disorganized financial system. The 1945-46 budget provided for revenue of 27,200,000,000 yen and expenditure of 103,800,000,000 yen. The 1946-47 budget totaled 56,100,000,000 yen, of which occupation costs amounted to 19,000,000,000 yen.

The national debt totaled 220,900,000,000 yen on Aug. 31, 1946.

MINERALS. Japan is relatively poor in minerals. Crude oil production in 1946 in Japan proper was 1,342,229 barrels, about one-third of current domestic requirements. With monthly coal production averaging less than 2,000,000 short tons in mid-1946, the nation was confronted with an acute fuel shortage. Other minerals include lead, silver, gold and copper.

FORESTS. Japan is well-wooded, with about 60,000,000 acres of forest. Among forest products are bamboo, charcoal and timber. The wood pulp industry of Japan proper reached an output of 845,000 tons in 1941; in 1945 it fell to 178,000 tons.

FISHERIES. Fishing, one of Japan's biggest industries, provides a staple food and considerable exports in normal years. The prewar fishing fleet of 356,482 vessels ranged from Alaska to the South Seas. The 1946 catch approached 2,400,000 tons.

TOPOGRAPHY. Japan's four main islands are Honshu, Hokkaido, Kyushu and Shikoku. The Ryukyu chain to the southwest is U. S. occupied and the Kuriles to the northeast are Russian occupied. The surface of the main islands consists largely of mountains separated by narrow valleys. There are about 50 more or less active volcanoes, including famous Fujiyama near Tokyo (12,395 ft.). Earthquakes are frequent. Japan has many rivers, broken by shallows and rapids, and navigable usually for flat-bottomed boats.

CLIMATE. The Japanese climate ranges from subtropical in its southern extremes, to winter cold and snow in Hokkaido. The winter temperatures are moderated in the central islands by the Japan Current. Mean annual temperature in Tokyo is 56°.

Korea

(Chosen)

Area: 85,225 square miles.

Population (est. 1940): 24,326,327 (Korean except 633,320 Japanese* and 49,815 non-Japanese foreigners, mostly Chinese).

Density per square mile: 285.4.

Occupation Commanders: Col. Gen. T. F. Shitkov (Soviet); Lt. Gen. John R. Hodge (U. S. A.).

Principal cities (census 1940): Seoul (Keijo), 935,464 (capital; U. S. zone headquarters); Pyongyang (Heijo), 285,965 (Soviet zone headquarters); Fusan, 249,734 (chief seaport); Seishin, 197,918 (seaport; rail center); Taikyu, 178,923 (silk center).

Monetary unit: Yen.

Languages: Korean, Japanese, Chinese.

Religions: Buddhist, Confucianist, Taoist, Christian (500,300 Christians in 1938).

*1938; now largely evacuated to Japan.

HISTORY. Korea, a peninsula about 600 miles long extending out from Asia be-

tween the Yellow Sea and the Sea of Japan, is about the size of Minnesota. Over the centuries it belonged sometimes to China, sometimes to Japan. It emerged from World War II under Russian and U. S. occupation but with the promise of independence "in due course."

According to legend which may be partly historical, a Chinese sage named Kija founded the kingdom of Chosun ("Morning Calm") in 1122 B.C. and thus began a dynasty which lasted until 193 B.C. In 108 B.C. Korea was annexed to China, and later divided into three small principalities which formed the kingdom of Silla. Silla revolted in A.D. 918 and declared its independence. In 1592 the Koreans defeated a Japanese fleet and, with Chinese help, ousted the Japanese invaders from their land. In 1627, the Manchus seized Korea and placed it again under Chinese sovereignty. In the Chinese-Japanese War of 1894-95, Japan won predominant influence in Korea, and in 1905 reduced it to a protectorate. In 1910 Japan formally annexed Korea. A Korean bid for independence was crushed ruthlessly in 1919.

In Aug., 1945, at the end of World War II, Korea was occupied by Soviet and U. S. troops. The United States, United Kingdom and Soviet Union agreed at Moscow in Dec., 1945, that Korea should be placed under the trusteeship of those three powers and China for a period not to exceed five years and that, as the first step toward Korean independence, the U.S. and Soviet commanders should meet as soon as possible to agree upon the formation of an all-Korean provisional government. U. S.-Soviet negotiations toward this end broke down May 6, 1946, but following protracted diplomatic interchange were resumed on May 20, 1947. The deadlock continued. However, the principal stumbling block was the Soviet demand that, in effect, only Communist groups should be consulted on the formation of the government. In Sept., 1947, the U. S. raised the question of a Korean settlement before the General Assembly of the United Nations.

The long subjugated Koreans received little experience in self-government under Japan and today are split into many political factions. U. S. and Russian differences over how to handle the present move toward independence have hampered the rehabilitation of the country. The U. S. zone of occupation, south of the 38th parallel, has about 43 percent of the area with 19,370,000 population, and is controlled by 50,000 troops. The Russian zone is occupied by about 200,000 troops.

SOCIAL AND ECONOMIC CONDITIONS. In 1946, there were 1,613,826 pupils in elementary schools, 99,308 in secondary schools, and 10,305 in higher schools. Less than half the population of school age (6

to 12) was in school in that year. There is a university at Seoul.

The Korean population is more or less homogeneous and successfully withstood Japanese efforts to assimilate it.

Korea, predominantly agricultural, cultivates about 12,000,000 acres. Crop production in 1946 was estimated at about 60 percent of the 1940-44 average. Chief products are rice, barley, oats, rye, millet, soybeans, tobacco, cotton and wheat.

Industrial development was speeded in the last years of Japanese rule. In 1938 there were 6,233 plants with 5 or more workers, and the total output in 1937 was valued at \$276,194,366. The leading industries by value of output ordinarily are chemical, textile, food, beverage and tobacco. The northern part of the country, in the Soviet zone, has the larger portion of Korea's industry.

Korea's prewar foreign trade was closely linked with that of Japan. Exports in 1939 were valued at \$261,394,000, of which 71.4 percent went to Japan and 20.4 percent to Manchukuo. Imports were \$360,058,000, of which 87.1 percent came from Japan and 5.8 percent from Manchukuo. The major exports were rice, fertilizer, cotton cloth, soybeans, raw silk, fish and coal. Exports from South Korea, March-December 1946, totaled 47,737,986 won. Imports were 168,-200,931 won.

Land communications, well developed by the Japanese for strategic reasons, included (1940) 2,619 miles of government railway, 1,107 miles of private railway and 17,011 miles of highway. The highways had greatly deteriorated by 1947.

The 1946-47 budget estimated expenditures at 11,800,212,360 yen and income at 8,013,393,996 yen. The only authorized legal tender in the U. S. zone are notes of the Bank of Chosen and type "A" supplemental Allied Military yen. The officially fixed rate for military purposes is fifteen yen to the dollar.

Korea's best mining regions are in the north. Leading products are coal, gold, silver, copper, tungsten ore, iron ore, graphite, lead, alum stone and pyrite ore.

Despite Japanese exploitation, considerable Korean forest areas remain, especially in the north. Most of the fishing companies were Japanese-owned before 1945.

TOPOGRAPHY AND CLIMATE. Korea's coast, with a rugged mountain range along the east, is fringed with more than a thousand islands. Several rivers are navigable for more than a hundred miles, including the Rakuto in the south, the Kan in the central region and the Yalu in the northwest, on the Manchurian border. The climate is equable, about like that of the eastern United States. Annual rainfall is about forty inches.

Lebanon (Republic)

Area: 3,475 square miles.

Population (est. 1943): 1,025,000 (Arabian, Armenian, Circassian, Turk).

Density per square mile: 294.9.

President: Sheik Bishara el Khoury.

Prime Minister: Riyad el Solh.

Principal cities (est. 1943): Beirut, 234,000 (capital, chief port); Tripoli, 70,800 (oil pipeline terminus).

Monetary unit: Syrian-Lebanese pound (£SL).

Languages: Arabic, French.

Religions: Maronite, Greek Orthodox, Greek Catholic, Mohammedan.

HISTORY. Smaller than Connecticut, Lebanon lies at the eastern end of the Mediterranean, between Palestine and Syria. In ancient times it was the mountainous hinterland of the Phoenician coast towns. From the 7th to the 11th centuries there infiltrated into southern Lebanon the heretics of Islam who finally coalesced into the Druse community.

In the 19th century the Turkish Sultanate encouraged the Druses to wage civil war against the Christian Maronites. After a massacre of 2,500 Christians in 1860, Lebanon was occupied by the French for a year. From 1864 to 1914, a Christian military government ruled the area under nominal Turkish sovereignty. After World War I, France received a League of Nations mandate over Syria and Lebanon. The French drew a Lebanese border in 1920 to offset predominantly Moslem Syria and proclaimed the area a republic under French control on May 23, 1926.

Vichy forces controlled Lebanon after the fall of France in 1940, but the Allies replaced them by July 14, 1941. Despite Syrian objections, the French permitted Lebanon to declare its complete independence on Nov. 26, 1941. Lebanon joined the Arab League.

GOVERNMENT. The modern Lebanese republic is governed by a president elected by parliament, and a cabinet of ministers appointed by the president, but responsible to parliament. An independent army is being formed, based on a cadre of native *troupes spéciales*, formerly part of the French army in the Levant. The last French troops were evacuated late in 1946.

SOCIAL AND ECONOMIC CONDITIONS. In 1942, there were 138,318 students attending various state, Moslem, Christian, private, French, American and British schools. Beirut has two universities. Christians are in the majority in Lebanon.

Lebanon produces tobacco, olives, grapes and other fruits, wheat and silk. Manufacturing is confined mainly to local consumers' goods. The silk industry is important in Beirut and Tripoli; cocoon production averages about 6,000 tons annually. Tobacco manufacturing is a government

monopoly. The only available foreign trade statistics are combined with those of Syria. Beirut, the chief port, ships out silk, fruit and carpets, and imports machinery, tin plate and textiles.

A rail line links Beirut with Damascus and Syria. Another, built in World War II by Allied engineers, runs from Tripoli to the Palestine border, and is part of a line from Cairo to Istanbul, via Haifa in Palestine. One of the oil pipelines from the Kirkuk field in Iraq terminates in Tripoli.

The 1946 budget balanced at £SL60,046,000, with about 20 percent allocated for public works, and 20 percent for defense.

Iron ore deposits are worked in the south, and building stone and marble are plentiful. The country also has thick deposits of inferior lignite coal.

TOPOGRAPHY AND CLIMATE. The topography is varied. There is a narrow coastal plain, and the steep Lebanon Mountains reach heights of approximately 10,000 feet. There are no large streams. Lebanon has hot dry summers (about 80° in Beirut) and cool rainy winters (50°-60° in January).

Liberia (Republic)

Area: c.43,000 square miles.

Population (est. 1938): 2,500,000 (Native Negro, 99%; American Negro, .8%; white, .1%; others, .1%).

Density per square mile: c.58.1.

President: William V. S. Tubman.

Principal city (est.): Monrovia, 10,000 (capital and chief port).

Monetary unit: Liberian dollar.

Languages: English (official), native tongues.

Religion: Protestant Christian (official); Mohammedan, Catholic, Pagan.

HISTORY. In 1816, the American Colonization Society received a charter from the U. S. Congress, authorizing it to send emancipated Negro slaves to the west African coast. The first settlers, led by Jehudi Ashmun, landed in 1822 at Cape Mesurado near the present site of Monrovia. White governors, named by the society, administered Liberia until 1841. On July 26, 1847, independence was proclaimed, and the first president was Joseph J. Roberts, a Virginia octoroon of considerable ability.

After 1920 considerable progress was made toward opening Liberia's interior, but even today only about 100,000 of its inhabitants are regarded as civilized, and lack of transportation hampers development of the heavily forested inland. In 1942, a U. S.-Liberian agreement admitted U. S. troops to build strategic airports. In 1944 an agreement was announced providing for permanent U. S. military and naval bases. **GOVERNMENT.** The government is modeled after that of the United States. The president and vice president are popularly elected for eight years. The 21-member

House of Representatives is elected for four years and the ten-member Senate for six years. Suffrage is extended only to land-owners over 21 who are of Negro blood, but a 1946 constitutional amendment provides for the seating in the House of an aborigine from each province in the hinterland. Liberia's army of about 4,000 men is organized on a militia basis.

SOCIAL AND ECONOMIC CONDITIONS. Education, compulsory in theory, is conducted in 201 schools, about half state and half mission. Attendance is about 16,000. There are six state high schools, a normal school, a state college and the Booker T. Washington Industrial and Agricultural Institute, supported by U. S. donations.

The English-speaking descendants of U. S. Negroes, known as Americo-Liberians, are the intellectual and ruling class. The aborigines, virtually all uncivilized, are divided into some 28 tribes speaking different dialects. Some are Moslems or pagans. Christians include Anglicans, Methodists, Catholics, Baptists and Presbyterians.

Agriculture, on a crude level, is the principal means of livelihood for the tribal Liberians, who raise coffee, rice, sugar cane and cassava. Manufacturing is non-existent except for small native industry, and the country's only big enterprise is the million-acre concession granted in 1925 to the Firestone Plantations Company for rubber cultivation. Production exceeded 20,000 tons in 1945 and was somewhat larger in 1946.

Most of the trade is with the United States. Exports in 1945 were \$11,342,625, of which 90 percent was rubber and 9 percent raw gold. Imports were \$5,829,232, including machinery, vehicles, chemicals, foods, textiles and metal goods.

Liberia has no railroads. Coastwise communication is supplied by Pan American Airways. Interior travel is by foot with native bearers. In 1939 there were less than 300 miles of roads, but U. S. troops built considerably more. There are no harbors, but a port and naval base is under construction at Monrovia, with U. S. assistance, at a cost of over \$15,000,000.

Finances are under U. S. supervision. Revenue in 1944 was \$1,598,401, and expenditures \$1,522,137. The national debt in 1947 was \$690,000.

TOPOGRAPHY AND CLIMATE. Liberia, about the size of Ohio, has a 350-mile frontage on the west coast of Africa, between the Ivory Coast and Sierra Leone. Its only well developed area is a low coastal strip running inland about seven miles. Beyond that is a low plateau, some of it mountainous, traversed by many rivers, of which the Cavalla (Kavalli) and the St. Paul's are the most important. The climate is tropical throughout, with rainfall up to 150 inches a year on the coast.

Liechtenstein (Principality)

Area: 65 square miles.
 Population (census 1941): 11,102 (mostly German).
 Density per square mile: 171.5.
 Ruler: Prince Franz Joseph II.
 Chief of Government: Alexander Frick.
 Principal city (census 1941): Vaduz, 2,020 (capital).
 Monetary unit: Swiss franc.
 Language: German.
 Religion: Roman Catholic.

Tiny Liechtenstein lies on the east bank of the Rhine, just south of Lake Constance, between Austria and Switzerland. It abolished its army in 1868 and has managed to stay neutral and undamaged in all European wars since that date.

Founded in 1719, Liechtenstein was made up of the Lordships of Vaduz and Schellenburg, immediate fiefs of the Holy Roman Empire. In 1806 it joined the Rhine Federation and in 1815 the German Confederation. It became independent in 1866. Franz Joseph II, the reigning prince, was born in 1906, and succeeded his great uncle, Franz I, in 1938. In 1943 Franz Joseph married Countess Gina Wilczek, of Austrian nobility.

The constitution of 1921 provided for a legislature, the *Landtag*, of 15 members elected by direct, universal suffrage. Liechtenstein adopted Swiss currency in 1921, and has been part of the Swiss Customs Union since 1924. Its foreign trade statistics are included in those of Switzerland, which also administers the country's telegraph and postal service.

Wheat, wine and fruit are the chief products. There are small manufactures of cotton, leather and pottery. The country's taxes are quite painless. For many years it had no debt, but at the beginning of 1946, the debt was 2,669,615 francs. In 1942-43, there were 42 elementary schools and 20 continuation schools, with 1,701 pupils.

Liechtenstein's area includes low valley land and upland peaks—Falkais at 8,401 feet, and Naafkopf, 8,432 feet. The chief mineral product is marble.

Luxemburg (Grand Duchy)

Area: 999 square miles.
 Population (est. 1942): 301,000 (Luxemburgian, French, German).
 Density per square mile: 301.3.
 Ruler: Grand Duchess Charlotte.
 Premier: Pierre Dupong.
 Principal city (est. 1942): Luxembourg, 59,000 (capital; iron and steel).
 Monetary unit: Luxembourg franc.
 Languages: Luxemburgian, French, German.
 Religion: Mainly Roman Catholic.

HISTORY. Luxemburg is a small buffer state between France, Germany and Belgium. Invaded and occupied in both World War I and II despite the fact that its neutrality was guaranteed, Luxemburg suffered most in the latter war, when the Nazis deported several thousand natives as slave labor.

Sigefroi, Count of Ardennes, an offspring of Charlemagne, was Luxemburg's first sovereign ruler. In 1060 the country came under the rule of the House of Luxemburg. From the 15th to the 18th centuries, Spain and Austria held it in turn. The Congress of Vienna in 1815 made it a Grand Duchy and gave it to William I, King of the Netherlands. In 1839 the Treaty of London ceded the western part of Luxemburg to Belgium.

After the Nazi invasion on May 10, 1940, the government fled the country, returning in 1944 after Allied troops had liberated it. A claim for 225 square miles of German territory was made in 1946.

GOVERNMENT. Luxemburg is a constitutional monarchy with the crown hereditary in the House of Nassau. The present heir to the throne is Prince Jean, born Jan. 5, 1921. The constitution of 1868, as amended in 1919, provides for democratic government through a chamber of deputies of 51 members, popularly elected for six-year terms. The constitution leaves to the sovereign the right to organize the government, which consists of a minister of state who is president of the government (premier) and at least 3 other ministers. There is also a council of state of 15 members, chosen for life by the sovereign.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory for all children between the ages of 6 and 13. The common or idiomatic language is *letzeburgesch*; German and French are also spoken. Labor unions are strongly organized into a single large federation.

Although the soil is not very fertile, agriculture is prosperous. Principal crops are potatoes, oats, wheat, rye and grapes. Wine production in 1946 was over 8,000,000 liters.

The mining and metallurgical industries, based on iron ore found in the south, are the most important. There were, in 1938, a total of 35 blast furnaces, with more than 20,000 workers, which produced 1,709,700 tons of pig iron; the 7 steel foundries produced 1,584,100 tons of steel. Metal manufactures were valued at \$53,650,000. Other important industries include brewing, sparkling wine, leather, textiles and cement.

Normally, Luxemburg has little unemployment, almost no illiteracy and such low taxes that many foreign holding companies maintain dummy headquarters there to escape high taxation in other countries.

monopoly. The only available foreign trade statistics are combined with those of Syria. Beirut, the chief port, ships out silk, fruit and carpets, and imports machinery, tin plate and textiles.

A rail line links Beirut with Damascus and Syria. Another, built in World War II by Allied engineers, runs from Tripoli to the Palestine border, and is part of a line from Cairo to Istanbul, via Haifa in Palestine. One of the oil pipelines from the Kirkuk field in Iraq terminates in Tripoli.

The 1946 budget balanced at £SL60,046,000, with about 20 percent allocated for public works, and 20 percent for defense.

Iron ore deposits are worked in the south, and building stone and marble are plentiful. The country also has thick deposits of inferior lignite coal.

After the Nazi invasion on May 10, 1940, the government fled the country, returning in 1944 after Allied troops had liberated it. A claim for 225 square miles of German territory was made in 1946.

GOVERNMENT. Luxemburg is a constitutional monarchy with the crown hereditary in the House of Nassau. The present heir to the throne is Prince Jean, born Jan. 5, 1921. The constitution of 1868, as amended in 1919, provides for democratic government through a chamber of deputies of 51 members, popularly elected for six-year terms. The constitution leaves to the sovereign the right to organize the government, which consists of a minister of state who is president of the government (premier) and at least 3 other ministers. There is also a council of state of 15 members, chosen for life by the sovereign.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory for all children between the ages of 6 and 13. The common or idiomatic language is *letzeburgesch*; German and French are also spoken. Labor unions are strongly organized into a single large federation.

Although the soil is not very fertile, agriculture is prosperous. Principal crops are potatoes, oats, wheat, rye and grapes. Wine production in 1946 was over 8,000,000 liters.

The mining and metallurgical industries, based on iron ore found in the south, are the most important. There were, in 1938, a total of 35 blast furnaces, with more than 20,000 workers, which produced 1,709,700 tons of pig iron; the 7 steel foundries produced 1,584,100 tons of steel. Metal manufactures were valued at \$53,650,000. Other important industries include brewing, sparkling wine, leather, textiles and cement.

Normally, Luxemburg has little unemployment, almost no illiteracy and such low taxes that many foreign holding companies maintain dummy headquarters there to escape high taxation in other countries.

By a customs union between Belgium and Luxemburg which came into force on May 1, 1922, to last for 50 years, customs frontiers between the two countries were abolished. In April, 1946, a pact was signed with Belgium and the Netherlands looking toward full economic union. Luxemburg's foreign trade figures are included in those of Belgium and no separate statistics are available; exports consist chiefly of iron and steel products.

Transportation facilities in 1938 included 318 miles of railway and 2,644 miles of highway, 1,301 miles of which are improved.

The consolidated debt on Nov. 15, 1945, was 807,730,202 fr. Estimated revenue in 1939 amounted to 355,230,000 fr. (\$14,209,000); estimated expenditures, 353,440,000 fr. (\$14,137,600).

Mexico (Republic)

(República Mexicana)

Area: 758,061 square miles.

Population (est. 1945): 22,178,495 (mestizo, 55%; Indian, 29%; white, 15%; others, 1%).

Density per square mile: 29.2.

President: Miguel Alemán.

Principal cities (est. 1944): Mexico City, 1,893,808 (capital); Guadalajara, 253,118 (manufacturing and distributing center); Monterrey, 215,193 (metallic industries); Puebla, 148,121 (cotton textile center); Mérida, 105,811 (sisal).

Monetary unit: Peso.

Language: Spanish, 86%; Indian, 14%.

Religion: Predominantly Roman Catholic.

HISTORY. Mexico is four times the size of Spain, the source of its cultural heritage, and one-fourth the size of the United States, the source of its modern industrial trend. Warm, mountainous Mexico has suffered a stormy political past, with bullets often speaking louder than ballots. In recent times the nation has steered moderately leftward in deference to the needs of its millions of poor and illiterate peasants.

Mexico's early history is shrouded in mystery, but at least two highly civilized races—the Mayas and later the Toltecs—preceded the wealthy Aztec empire conquered in 1519-21 by the Spanish under Hernando Cortez. Spain ruled for the next 300 years until 1810 (the date was Sept. 16 and is now celebrated as Independence Day), when the Mexicans first revolted. They continued the struggle and finally won independence in 1821 by the Treaty of Córdoba.

Turbulent years followed. From 1821 to the first presidency of Porfirio Díaz in 1877, there were two emperors, several dictators and enough presidents and provisional executives to make a new government on the

average of every nine months. Mexico lost Texas (1836), and after defeat in the war with the United States (1846-48) it lost the area comprising the present states of California, Nevada and Utah, most of Arizona and New Mexico, and parts of Wyoming and Colorado.

In 1855 the Indian patriot Benito Juárez began a series of liberal reforms including the disestablishment of the Catholic Church, which had acquired vast property. A subsequent civil war was interrupted by the French invasion of Mexico (1861), the crowning of Maximilian of Austria as emperor (1864), and then his overthrow and execution by forces under Juárez, who again became president in 1867.

During the rule of the dictator Porfirio Díaz (1877-80 and 1884-1911) the country was freed from political strife, made substantial economic progress, and gained a respected position in foreign relations. But Díaz' reactionary land policy led to revolution and his resignation in 1911. The next few years were marked by bloody political-military strife, and trouble with the United States culminating in the punitive expedition into northern Mexico (1916-17) in unsuccessful pursuit of the bandit-politician Pancho Villa. President Venustiano Carranza, who had shown pro-German sympathy in World War I, was assassinated in 1920, and was succeeded by General Alvaro Obregón.

President Plutarco Elías Calles (1924-28) largely abandoned Obregón's reforms, and Obregón, re-elected in 1928 on a radical agrarian and anti-clerical platform, was assassinated by a religious fanatic before he could take office. There followed a series of Calles puppets who ruthlessly suppressed labor and farm organizations. General Lázaro Cárdenas (1934-40), backed by the National Revolutionary Party (PRM), began a socialistic program of land distribution to peasants, government seizure of foreign-owned oil lands, and broad labor reforms. General Manuel Avila Camacho, president during World War II, cooperated closely with the United Nations and followed Cárdenas' policy at home.

In July, 1946, Miguel Alemán was elected president, backed by the Avila Camacho administration and the PRM. It was the most peaceful election in Mexican history. Alemán, like his predecessor, pursued the internal policy initiated by Cárdenas; the early part of his administration was marked by continued cordial relations with the United States. Presidents Truman and Alemán exchanged visits in each others' countries.

GOVERNMENT. The president, popularly elected for six years and ineligible to succeed himself, governs with a cabinet of his appointed ministers. The Federal Congress has two houses—the 147-member

Chamber of Deputies, elected for three years (one for each 150,000 population) and the 58-member Senate, elected for six years with two senators from each of the 28 states and two from the Federal District (Mexico City). All married male citizens at least 18, and all single male citizens at least 21 are eligible to vote.

Each of the 28 states has considerable autonomy, with a popularly-elected governor, legislature and local judiciary. The president appoints the governors of the three Federal territories, and the governing body of the Federal District.

Military service is compulsory, and the president holds supreme command of the armed forces, through the Secretary of War. The national army, greatly modernized during World War II, numbered about 57,500 men in 1947; the air force had 250 planes and two U. S.-trained squadrons. The small navy consists of six sloops, about 20 coast guard vessels and other minor craft.

EDUCATION. Illiteracy, affecting approximately a third of the people, is one of Mexico's big problems, and the government is trying hard to reduce the rate. About 1,500,000 illiterates were taught to read and write in 1945 and 1946. Education is free, compulsory from 6 to 16, separated from the church and under Federal control. There were about 25,000 primary schools in 1946 with a two million enrollment. Secondary schools had an enrollment of about 80,000. The ten universities had 30,000 students, of which 22,230 (in 1945) attended the University of Mexico, in Mexico City.

RELIGION. About 90 percent of Mexicans are Roman Catholics, but all religions are tolerated. The 1857 Constitution separated church and state. The church cannot acquire property, and its present holdings are deemed to belong to the state. Priests, who must be Mexican-born, cannot take part in politics.

GOVERNMENT CONTROL. Federal control of the national economy is increasing steadily in Mexico. The government regulates farm production, fixes prices, and controls both exports and imports. Since 1915 it has consistently broken up large estates for distribution to the poor on state-owned communal farms. In 1941, title to the land began to pass to the peasants themselves. The right to strike, maximum hours, minimum wages and a social security system—all these have been established by the government.

AGRICULTURE. Primitive agricultural methods are steadily giving way to modern practices. Almost 10 percent of the 1945 Federal budget went for irrigation projects. This brought to more than 17,000,000 acres the total of cultivated land. About 2,500,000 acres are irrigated now, but

the eventual total of watered land is expected to be 12,000,000 acres. Approximately half the arable land is planted to corn—a staple item in the national diet. The Yucatán peninsula, at the southern end of the Gulf of Mexico, raises more than half of the world supply of sisal hemp.

Production of principal crops has been as follows in recent years (in tons): corn, 2,843,160 (1946); wheat, 424,270 (1945); sugar, 411,048 (1946); rice, 145,464 (1945); sesame, 96,072 (1943); pineapple, 71,700 (1944); potatoes, 135,770 (1943); cotton, 514,800 (bales, 1946); bananas, 7,200,000 (bunches, 1943).

Stockraising is important on non-arable land. Mexico's inventory of livestock in 1943 showed 10,082,958 cattle, 1,887,478 horses, 721,343 mules, 2,159,734 asses, 3,673,887 sheep, 6,544,129 goats and 3,698,233 hogs.

INDUSTRY. Considering its cheap labor, abundant raw materials and available water power, Mexico is still industrially backward. However, steady expansion is taking place. In 1940 there were 12,624 factories or shops with 332,323 workers and a product value of \$579,137,240. Leading establishments were cotton textile mills with estimated annual production of 600,000,000 yards; sugar mills and distilleries; cigar and cigarette factories, the latter turning out 917,000,000 packs in 1945; shoe, binder, twine and soap factories; chemical works; breweries; flour, paper and coffee mills; iron and steel mills and foundries; and cement, glass and ceramic works. Between 1940 and 1946, 360 industrial corporations employing 180,000 workers were formed, and manufacturing accounted for 26 percent of the national income in 1946.

Mexico has had an adverse trade balance since late 1944. Exports in 1946 were 1,961,531,410 pesos (1945: \$275,234,400). Imports were 2,636,786,960 pesos (1945: \$330,941,760). Chief exports: gold (13.6%), cotton cloth (11.8%), silver (5.9%), lead (5.1%) and raw cotton (3.7%). More than 85 percent of Mexico's trade is ordinarily with the United States. Latin America gets about 5 percent and Europe, mainly Britain, 4 percent.

MINERALS. Mexico is one of the richest mineral countries in the world. It outranks all other countries in silver production (1946: 1,345,634 kg.). Other important minerals, with 1946 figures, are gold, 13,079 kg.; copper, 61,053 metric tons; lead, 140,143 metric tons; zinc, 139,535 metric tons; coal, 977,330 metric tons. A large variety of other industrial minerals are produced. The 1945 mineral value, excluding petroleum, was \$156,565,131, of which precious metals totaled \$48,067,989. Most of the mining properties are foreign-owned, and the industry is declining in relative importance.

The oilfields, lying along the east coast, were seized by the government in 1938, but later the foreign owners were indemnified. There are 17 plants and 13 refineries with daily capacity of 200,000 barrels. Production in 1946 was 49,235,421 barrels. Reserves total about 900,000,000.

FORESTS. Mexican timberlands in 1945 covered 25,893,993 acres, and 1942 production in cubic feet included pine, 33,315,000; mahogany, 1,317,250; red cedar, 1,045,320; white cedar, 432,600; and primavera, 91,820. Charcoal, resins and other by-products came to 50,265 tons. Yucatán produces nearly all of the world's chicle, the juice of the sapodilla tree, used as the base of chewing gum. Chicle production in 1945-46 was 11,590 tons.

COMMUNICATIONS. Mexico has about 15,000 miles of railroads; the 1945 freight total was 26,124,510 tons, of which the nationalized lines carried more than half. There were over 36,000 miles of improved highway in 1946. Merchant ships in 1940 totaled 1,657,899 gross tons. Veracruz and Tampico, both on the Gulf of Mexico, are the most important ports. In 1946 Mexico had 36 airline companies covering 55,816 miles.

The national debt on Dec. 31, 1945, was 1,382,000,000 pesos. The 1945 national budget was \$207,377,625 (1944: \$227,150,000), of which about two-thirds was divided among agriculture, education, national defense and communications. U. S. direct investments in 1940 were \$357,927,000; British investments on Dec. 31, 1946, were \$128,698,150.

TOPOGRAPHY. Mexico is a great, high plateau, open to the north, with mountain chains on east and west and with ocean-front lowlands lying outside of them. It has two big spears—the peninsula of Lower California which is mountainous, and the Yucatán peninsula, which is mostly a low plain. The eastern mountains are marked by high volcanoes, including Popocatepetl, 17,888 feet and not entirely extinct; Ixtaccihuatl, 16,960 feet; and the loftiest, Orizaba, 18,696 feet. None of Mexico's many short streams is navigable to any major extent.

CLIMATE. Partly in the torrid and partly in the north temperate zone, Mexico has three distinct climate regions. From the coasts inland to the plateau it is tropical, with temperatures sometimes topping 100°, but averaging from 77° to 82°. The plateau is sub-tropical with an average of 75°, and the mountains, over 6,000 feet, average 60°. On the east coast the annual rainfall sometimes reaches 100 inches, while in Lower California rain hardly ever falls. Rainfall on the plateau is 20 to 40 inches a year, comparable to that of the west central United States. In Mexico City the coldest months are December and January (about

55°); the warmest, April and May (65°). The wet season lasts from April to September.

Monaco (Principality)

Area: .6 square mile (375 acres).

Population (census 1939): 23,956.

Density per square mile: 38,453.

Ruler: Prince Louis II.

Principal cities (census 1939): Monaco, 1,938; La Condamine, 11,339; Monte Carlo, 10,681.

Monetary unit: French franc.

Language: French.

Religion: Roman Catholic.

A tiny, hilly wedge driven into the French Mediterranean coast nine miles east of Nice, Monaco is a little land of pleasure with a prewar tourist business that ran to 1,500,000 visitors a year. The home of world-famous Monte Carlo, a place of benign sun and balmy air, Monaco offers golf, tennis and bathing by day, and drinking, dining and gambling by night. Residents of Monaco are forbidden to enter the gaming rooms, but they have compensations. They pay no taxes, and most of them make good livings from the thriving tourist business.

Monaco, with its beautiful terraced hills and crags, had popular gaming tables as early as 1856. Five years later, a 50-year concession to operate the games was granted to François Blanc, of Bad Homburg. This concession passed into the hands of a company in 1898, and was extended to 1947. All the governmental expenses are paid from the resultant revenue. The concession's annual license fee since 1936 has been £100,000. Under German occupation during part of World War II Monaco had to submit to a curfew and a great loss of gaiety, but by 1947 activities were in full sway again.

The Phoenicians, and after them the Greeks, had a temple on the Monacan headland honoring Heracles. From *Monokos*, the Greek surname for this mythological strong man, the principality took its name. After being independent for 80 years, Monaco was annexed to France in 1793 by the French Revolutionists, and was placed under Sardinia's protection in 1814. In 1861, it went under French guardianship, but kept its independence.

Prince Albert of Monaco gave the principality a constitution in 1911, creating a national council of 21 members popularly elected for four years. The government is under a ministry, acting on the prince's authority. The heiress to the throne, Princess Charlotte, renounced her claim in 1948 in favor of her son, Prince Renier, born in 1923. Prince Louis II (born July 12, 1870) married Ghislain Dommanges, a naturalized Monacan, in 1946.

Nepal (Military Oligarchy)

Area: c.54,000 square miles.

Population (est. 1938): 5,600,000 (Gurkha [predominant], Magar, Gurung, Bhotia [Tibetan], Newar).

Density per square mile: c.103.7.

Ruler: Tribhubana Bir Bikram.

Prime Minister: Sir Padma Shumshere Jung Bahadur Rana.

Principal city and capital (est.): Katmandu, 108,800.

Monetary unit: Nepalese rupee.

Languages: Parbatia, Gubhajius, Tibetan.

Religions: Hinduism, Buddhism.

HISTORY. A landlocked country about the size of Iowa, lying between India and Tibet, Nepal has two great distinctions. It contains Mt. Everest, 29,002 feet high, the tallest measured mountain in the world. And it produces some of the toughest fighting men in the world—the Gurkhas.

Led by Rajah Prithwi Narayana, the Gurkhas invaded Nepal from India in 1768 and conquered it. A commercial treaty was signed with Britain in 1792, and in 1816, after more than a year's hostilities, the Nepalese agreed to allow British residents to live in Katmandu, the capital. In 1923 Britain recognized the absolute independence of Nepal. The United States and Nepal signed a treaty of friendship and trade on April 25, 1947.

Nepalese troops assisted the British during the Indian Mutiny, the Tibet War of 1904, World War I, the Afghan hostilities of 1919, and World War II.

GOVERNMENT. Theoretically, the king is supreme, but real power is invested in the prime minister, nominated by special rules from among the royal family, whose members are Hindu Rajputs. Under the prime minister is a council consisting of members of the ruling family, the military, the high priests and other high officials. The predominant Gurkhas are essentially a military caste. The army numbers about 20,000 regulars and 25,000 reserves. More than 100,000 Gurkha volunteers fought with the Indian Army in the Burma campaign of World War II.

ECONOMIC CONDITIONS. Cultivated and irrigated where possible, the main valley of Nepal grows rice, wheat, pulse, fruits, vegetables, spices, sugar cane and potatoes. A few sheep and cattle are grazed. Manufacturing is limited to native handicraft. Trade with India passes through various frontier stations, and there are two mountain trade routes to Tibet.

Main exports include hides, skins, opium, gums, resins, dyes, jute, wheat, pulse, rice, spices and timber. Two railroads enter Nepal for short distances—one from Raxaul, India, to Amlekhganj, the other from Jayauagar to Bijulpura. Transportation is

for the most part difficult, and motorable roads are almost non-existent.

TOPOGRAPHY, RESOURCES AND CLIMATE. Along its southern border, Nepal has a strip of level land which is partly forested, partly cultivated. North of that is the slope of the Himalayan Range, including Mt. Everest and many peaks higher than 20,000 feet. Mineral resources, nearly all unexploited, include lignite, copper, zinc, lead, sulfur, marble and iron. Southern Nepal has valuable forests which yield gum, timber, resin and dye. Hemp plants grow wild. Mean temperature is 60°, with the hot season from April to June. Most of the rainfall (average 60 in. annually) occurs from June to October.

Netherlands (Kingdom)

(Koninkrijk der Nederlanden)

Area: 12,742 square miles.

Population (est. 1946): 9,479,000 (practically all Dutch).

Density per square mile: 743.1.

Sovereign: Queen Wilhelmina.

Prime Minister: Louis J. M. Beel.

Principal cities (est. 1942): Amsterdam, 790,900 (capital, financial center); Rotterdam, 616,910 (chief port); The Hague ('s-Gravenhage), 507,351 (seat of government); Utrecht, 170,880 (railway center); Haarlem, 144,923 (tulip center).

Monetary unit: Guilder.

Language: Dutch.

Religions (1930): Catholic, 36.4%; Dutch Reformed, 34.2%; other Protestant, 11.0%; Jewish, 1.4%; others and no creed, 17%.

HISTORY. The Netherlands is small, half again as large as Massachusetts, but it is densely settled, is a major colonial power, and was eighth from the top in world trade at the start of World War II. Occupied by the Nazis until May, 1945, the Netherlands emerged with a fairly well salvaged economy and a less than average degree of the political chaos that gripped Europe. The principal international problem in 1947 remained the status of the Netherlands Indies, where the native nationalist movement continued to flourish, and where, in July, the Dutch undertook military operations against the Indonesians, causing the United Nations Security Council to intervene.

Julius Caesar, the Roman, found the low-lying Netherlands inhabited by Germanic tribes, the Nervii, Frisi and Batavi. The Batavi on the Roman frontier did not submit to Rome's rule until 13 B.C., and then only as allies. A part of Charlemagne's empire in the 8th century A.D., the area later passed into the hands of Burgundy and the Austrian Hapsburgs and finally in the 16th century came under Spanish rule.

When Philip II of Spain suppressed political liberties and the growing Protestant movement in the Netherlands, a revolt led by William of Orange broke out in 1568. Under the Treaty of Utrecht in 1579, the seven northern provinces became the Republic of the United Netherlands.

The Dutch East India Company had been established in 1602, and by the end of the 17th century Holland was one of the great sea and colonial powers of Europe. In 1689 William III of Orange and his wife, Mary, the elder daughter of James II of England, became King and Queen of England. The power of the republic declined in the 18th century during the wars with Spain and France, and in 1795 French troops ousted William V.

Following Napoleon's defeat, the United Netherlands and Belgium became the "Kingdom of the United Netherlands" under William I, son of William V and head of the House of Orange. The Belgians withdrew from the union in 1830, forming their own kingdom. William I abdicated in favor of William II in 1840; the latter was largely responsible for the promulgation of a liberal constitution in 1848.

The Netherlands continued to prosper during the long reign of William III from 1849 to 1890. The male line of the House of Nassau became extinct with his death in 1890 and he was succeeded by his 10-year-old daughter, Wilhelmina, who was crowned Queen in 1898.

Neutrality was maintained during World War I, but overseas trade suffered heavily from the Allied blockade and German submarine warfare.

The Prime Minister from 1933 to 1939, except for brief intermissions, was Dr. Hendrick Colijn, leader of the Protestant Anti-Revolutionary Party. At the outbreak of World War II neutrality was proclaimed, but German troops invaded the country May 10, 1940, and by May 15, Dutch troops were ordered to lay down their arms. Queen Wilhelmina and Crown Princess Juliana fled to London, where a government-in-exile was established under Prime Minister P. S. Gerbrandy.

The German Army in the Netherlands capitulated May 5, 1945, and on May 23, the Dutch cabinet met once more in The Hague and tendered its resignation to Queen Wilhelmina. A new cabinet was formed on June 23 under Professor Willem Schermerhorn, a resistance leader and head of the Labor party. The Catholic party obtained a plurality in the May, 1946, elections and its leader, Dr. Louis J. M. Beel, set up a Labor-Catholic cabinet on July 3.

GOVERNMENT. Queen Wilhelmina, born Aug. 31, 1880, daughter of King William III, succeeded to the throne Nov. 23, 1890,

and assumed the government Sept. 6, 1898. She was married in 1901 to Henry, Prince of Mecklenburg-Schwerin (born 1876, died 1934). The heiress apparent is Princess Juliana, born April 30, 1909, married on Jan. 7, 1937 to Prince Bernhard of Lippe-Biesterfeld (born in 1911). They have four daughters: Princess Beatrix (born 1938); Princess Irene (born 1939); Princess Margriet Francisca (born 1943); Princess Maria Christina (born 1947).

The Netherlands is a constitutional and hereditary monarchy, with female succession taking place only in default of male heirs. Executive power is vested exclusively in the sovereign, while legislative power rests with the sovereign and the States-General (Parliament). The upper chamber of Parliament, with 50 members, is elected for 6 years by the provincial states. The lower chamber, which shares with the government the privilege of initiating new bills and proposing amendments, consists of 100 deputies who are elected directly for four years and retire *en bloc*. Executive power is exercised in part by responsible ministers, headed by the prime minister and holding office at the pleasure of the sovereign. Suffrage is universal for all Dutch subjects of 25 years of age. The party standing in the lower chamber is as follows: Catholic 32, Labor 29, Anti-Revolutionary 13, Communist 10, others 16.

Each of the eleven provinces has a local representative body—a Provincial State—presided over by a royal commissioner. The State collects local taxes, and legislates on local matters. Routine administrative work of the province is carried on by a group of six members called the Deputed States. Each of the 1,054 communes has a locally elected council and a mayor appointed by the crown.

DEFENSE. Military service is compulsory. The army had about 175,000 men in 1947, and the air force 275 planes. About 100,000 men (including 40,000 mixed Dutch, Eurasian and Indonesian troops) were on duty in the Netherlands Indies at the outbreak of hostilities in Java in July, 1947. The navy (Dec. 31, 1946) had an escort carrier, two light cruisers (two more under construction), six destroyers, seven submarines, and other smaller craft. An eventual naval personnel strength of 20,000 was contemplated. Bases are maintained in the Netherlands Indies and the Caribbean, as well as in the homeland.

EDUCATION. In 1938, elementary schools numbering 7,812 (of which 5,006 were private) had a total enrollment of 1,242,778; 288 secondary schools had 62,301 students. The six universities had 9,471 students. The four public universities are at Leyden, Utrecht, Groningen and Amsterdam; the two voluntary universities are the Calvinist

University of Amsterdam and the Roman Catholic University of Nijmegen. Education is compulsory from the ages of 7 to 13. By an act passed in 1920, religious bodies are allowed to maintain denominational schools fully supported by the state.

RELIGION. The royal family and a large number of the inhabitants belong to the Dutch Reformed Church (Protestant), but there is complete religious freedom. Appropriations from the national budget are made for support of the Protestant, Roman Catholic, Jewish and Jansenist Churches. The Roman Catholic element is strongest in the southern provinces of Limburg and North Brabant.

AGRICULTURE. Of the total area, approximately 2,600,000 acres are arable, 3,000,000 meadowland, 170,000 devoted to horticulture, arboriculture and fruit gardens, and 630,000 forested. Dutch farms are characteristically small, with only a few larger than 250 acres. Wheat (385,000 short tons in 1946), barley (192,500), oats (462,000), rye (495,000) and sugar beets are grown, but dairying is the most important branch of agriculture. In 1942 there were 2,440,553 cattle, 491,000 hogs, 337,177 horses, 574,497 sheep. Production of milk, butter and eggs is under state control. Large quantities of vegetables and fruits are raised for export. Almost as important as the dairy industry is the raising of tulip, hyacinth and other flower bulbs in the area around Haarlem.

By 1947, dairy and crop production had reached prewar levels.

INDUSTRY. Most Netherlands industries derive from agriculture. An exception is the textile industry, with 50,374 workers and output valued at \$102,622,040 in 1938, followed by the clothing industry, 38,242 workers and output of \$62,612,894; food, 7,184 workers and output of \$45,000,663; paper, 6,296 workers and output of \$20,787,351. The Netherlands ranks fifth among the world's shipbuilding nations, with 101 vessels of 224,428 tons under construction on June 30, 1947. Amsterdam is one of the world's leading diamond-cutting centers.

TRADE. Exports in 1946 were 784,844,000 guilders and imports 2,145,045,000 guilders, leaving a heavy adverse trade balance. Leading customers, in millions of guilders, were Belgium 168.3, United Kingdom 87.9, Sweden 62.2, France 55.6 and Switzerland 53.2. Chief suppliers were the U. S. 534.5, United Kingdom 347.5, Belgium 301.4, Sweden 136.2 and France 96.4. Leading exports are textiles, butter, iron and steel industries, cheese and fertilizers. Normally textiles, cereals and flour, iron and steel, wood, wool, coke and briquettes and oil are important imports. There is a large transit trade with central Europe.

COMMUNICATIONS. The merchant marine in 1939 included 1,532 vessels of 2,972,900 gross tons, but war losses cut the fleet to

300 vessels of 1,614,094 tons in 1945; it increased to 2,855,400 tons in June, 1946. An extensive network of rivers expanded by many canals has led to extensive development of inland shipping. The length of navigable canals and rivers is almost 5,000 miles. Barge tonnage in Feb., 1946, was 2,700,000, as compared with 4,400,000 in 1940. The wealth of water transport has obviated the need for wide railway development. In 1946 there were 1,753 miles of railway, all privately owned, and 8,064 miles of highway.

Expenditures (ordinary and extraordinary) for the year 1946-47 were estimated at 4,250,093,693 guilders, and revenue at 2,598,976,684 guilders. The public debt on June 30, 1946, was 16,706,000,000 guilders.

MINERALS, FORESTS AND FISHERIES. Netherlands minerals are few. The only important ones are coal, 6,531,892 tons in 1945; lignite, 143,463 tons; and salt, 210,689 tons in 1943. There also are peat swamps and about 630,000 acres of forest. The Netherlands fishing fleet made a total catch of 248,669 tons valued at \$10,739,407 in 1938. Herring—107,808 tons worth \$4,620,765—was the most important item. The 1946 catch almost reached prewar levels.

TOPOGRAPHY. Part of the great plain of north and west Europe, the Netherlands has maximum dimensions of 190 by 160 miles and is low and flat except in Limburg in the southeast, where some hills rise to 300 feet. About half the country's area is below sea level, making the famous Dutch dikes a requisite to use of much land. Reclamation of land from the sea through dike-building has continued through recent times, and such land is usually very fertile.

The province of Zeeland consists mainly of six delta islands guarding the mouth of the Schelde (Scheldt) River and the entrance to Belgium's port of Antwerp. Off the northwest coast are the sandy West Frisian Islands, lying from three to twenty miles out and stretching from the Zuider Zee to the German coast.

All drainage reaches the North Sea, and the principal rivers—Rhine, Maas (Meuse) and Schelde—have their sources outside the country. The Rhine is the most heavily used waterway in Europe, and nearly three-fourths of its 75 to 85 million tons of annual prewar traffic was handled through the Netherlands port of Rotterdam.

CLIMATE. Marsh mists, sea fogs and a humidity exceeding 80 percent mark the Netherlands climate. Winters are colder than in eastern England at the same latitude. Utrecht, roughly central in location, has a January average temperature of 34.2° and a July average of 62.6°. Average rainfall for the country is about 28 inches, with July–September the wettest period.

NETHERLANDS OVERSEAS TERRITORIES

CURACAO—Status: Autonomous part of Netherlands State.

Area: 403 square miles.

Population (est. 1944): 127,866.

Capital: Willemstad (pop. 1945: 36,000).

Governor: Pieter A. Kasteel.

Chief export: petroleum (more than 95 percent).

Agricultural products: aloes, beans, corn.

Manufactures: refined petroleum, straw hats.

Mineral products: lime phosphate, salt.

Curacao comprises two groups of islands about 500 miles apart; one, about 40 miles north of the Venezuelan coast, consists of Curacao (210 sq. mi.), Bonaire (95 sq. mi.) and Aruba (69 sq. mi.); the other, lying to the northeast, consists of 3 small islands with a total area of 29 square miles. The Dutch acquired the island of Curacao from Spain in 1634 and have held it since, except for short intervals during the Napoleonic Wars. The U.S. accepted the invitation of the Netherlands government during World War II to dispatch troops to Curacao to co-operate in its defense. Administrative officials include the governor (appointed by the crown) and an elected council.

The backbone of Curacao's economy is the refining of crude oil which comes from the adjacent Maracaibo fields in Venezuela. The refinery on Aruba, the world's largest, completed in 1945 the processing of the billionth barrel of oil since its opening in 1929. Aside from native Curacaoans, there were in the territory 7,511 English, 5,156 Dutch and 4,213 Venezuelans in 1943. Dutch is the official language, but many inhabitants speak a patois known as Papiamentu, a mixture of Spanish, Dutch, English, Portuguese, native and other words. Only a small part of the trade is carried on with the homeland.

The island of Curacao has a torrid climate, with average temperatures of 79° in January and 83° in September. Rainfall is light, averaging only 16 inches annually—mostly from October to January.

SURINAM (Dutch Guiana)—Status: Autonomous part of Netherlands State.

Area: 54,291 square miles.

Population (est. 1945): 178,000.

Capital: Paramaribo (pop. 1944: 60,723).

Governor: J. C. Brons.

Foreign trade (1945): exports, 7,432,264 florins; imports, 12,626,652 florins.

Agricultural products: rice, sugar, coffee.

Minerals: bauxite (1945: 754,000 tons), gold (1945: 183,364 grams).

Forest product: balata (about 275 tons annually).

Surinam lies in northeastern South America between British and French Guiana. It was received by the Dutch from England at the Peace of Breda (1667) in

exchange for New York and at that time included British Guiana, which was seized by England in 1803 and formally ceded to her at the conclusion of the Napoleonic Wars. The United States and Brazil accepted the invitation of the Netherlands government during World War II to co-operate in the defense of the bauxite mines. The governor (appointed by the crown) is assisted by a partly-elected legislative council.

Mining is the most important activity, and only about 65,000 acres are under cultivation. Surinam is a leading source of bauxite. Its largest mines are owned by Aluminum Company of America subsidiaries. In 1946 a company was formed to work 10,000,000 acres of the area's vast, but almost inaccessible, hardwood forests.

The heterogeneous population includes approximately 1,000 Dutch, 1,000 other Europeans, 2,400 Chinese, 19,000 Djukas (descendants of escaped slaves), 2,600 aboriginal Indians, 70,000 Negroes and mulattoes, as well as 85,000 East Indian (British India and Java) laborers brought in after the abolition of slavery in 1863 to work the sugar plantations.

From its settled coastal plain, Surinam runs back to a virtually unexplored mountain and jungle area along the Brazilian border. Rivers are the chief means of interior travel. The climate is tropical throughout but is modified by the northeast trade winds. Yearly range of temperature is approximately 70.5°–90°. Annual rainfall is about 90 inches on the coast.

Netherlands Indies

(Part of Netherlands State)

(Nederlandsch-Indië)

Area: 735,268 square miles.

Population (est. 1942): 72,000,000 (Native except for 1,190,014 Chinese, 240,162 European [208,269 Dutch], and 7,195 Japanese in 1930).

Density per square mile: 96.5.

Acting Governor General: Hubertus J. van Mook.

Principal cities (census 1930): Batavia, 435,184 (capital); Soerabaja, 341,675 (seaport, naval base); Semarang, 217,796 (seaport, central Java); Bandoeng, 166,815 (commercial center, west Java); Soerakarta, 165,484 (sugar tobacco).

Monetary unit: Dutch guilder.

Languages: Javanese, Sundanese, Madurese Malay, Dutch.

Religions: Mohammedan (predominant), Christian (about 2,500,000), Brahmin, Buddhist.

HISTORY. The Netherlands Indies, a group of islands with a total area more than two and a half times that of Texas, constitute one of the world's richest colonial areas. These islands—Sumatra, Java, Madura

central and southern Borneo, Celebes, western New Guinea and the Moluccas—would reach from New York to London if their extent was transposed to the Atlantic. They have great wealth in tin, rubber, spices, oil, quinine and copra.

During the first few centuries of the Christian era, most of the islands came under the influence of Hindu priests and traders who spread their culture and religion. Moslem invasions began in the 13th century, and most of the area was Moslem by the 15th century. Portuguese traders arrived early in the 16th century but were ousted by the Dutch about 1595. After Napoleon subjugated the Netherlands homeland in 1811, the British seized the islands but returned them to the Dutch in 1816. Political and economic reforms were introduced about 1870, and in 1903 the natives won a part in local affairs. In 1922 the islands were made an integral part of the Netherlands kingdom.

In World War II, Japanese troops began their attacks in early 1942; they took Batavia on March 5 and the big naval base at Soerabaja by March 10. Japanese military occupation with nominal native self-government continued until Aug., 1945, except in outlying parts of New Guinea and Borneo. About the time of the Japanese surrender, a self-styled Indonesian Republic headed by Achmed Soekarno sprang up and took over effective control of parts of Sumatra and Java. Allied forces, mostly British Indian troops, moved in, and fighting between them and the nationalists continued until Nov. 15, 1946, when Dutch-native negotiations resulted in a draft agreement signed at Linggadjati, near Cheribon. The agreement was formally initiated by Dutch and Indonesian authorities on March 25, 1947.

Under this agreement there was to be formed by Jan. 1, 1949, the Netherlands-Indonesian Union, consisting on the one hand of the Netherlands, Curaçao and Surinam, and on the other of the United States of Indonesia. The latter was to be a sovereign state composed of three equal states: the Republic of Indonesia (Java, Sumatra, Madura), East Indonesia (Celebes, the Moluccas, Bali, Lombok, Dutch Timor), and other territories, such as Borneo and Dutch New Guinea, whose political status remained to be determined. The governmental structure of the United States of Indonesia was to be determined by a popularly elected Constituent Assembly. Each of the states was to control local matters.

Plans for implementing the agreement, however, remained in controversy, and fighting between the Dutch and the nationalists broke out anew on July 20, 1947. The Dutch, claiming constant violations of the Netherlands-Indonesian truce by the

Republic of Indonesia, struck first with an attack on Semarang, big seaport on the north coast of Java. President Soekarno immediately appealed for intervention by the United Nations, but Dutch troops continued operations and by the end of July had secured a large part of Java and much of Sumatra.

In response to a call from the U. N. Security Council, both sides issued cease-fire orders on Aug. 4, 1947, although the Netherlands Government questioned the competency of the Council to intervene in the matter. A resolution was approved on Aug. 25, calling for a report on the situation by the consular representatives of the Security Council members in Batavia.

Meanwhile, the other constituent parts of the proposed U. S. of Indonesia, began to take shape. An East Indonesian Government was formed on Jan. 13, 1947, and autonomous West Borneo (Kalimantan) and East Borneo (Great Siak) states were recognized by the Netherlands Government on May 12 and Aug. 27, respectively.

Dutch forces in Indonesia totaled about 60,000 at the outbreak of hostilities, plus about 40,000 men of the Royal Netherlands Indies Army, composed of Dutch, Eurasians and Indonesians with Dutch officers. The Indonesian Republic's army numbered an estimated 200,000, equipped to some extent with Japanese matériel.

SOCIAL AND ECONOMIC CONDITIONS. There are more than 20,000 native schools with approximately 2,500,000 pupils, and 628 European-type schools with 150,000 students, but the illiteracy rate is high. There are institutions of higher learning at Batavia and Bandoeng, and numerous schools are maintained by Christian missionaries.

The islands of Java and Madura, with only seven percent of the area, have more than two-thirds of the population, and are among the most densely settled areas in the world (more than 800 per sq. mi.). The natives, including about 137 races and tribes, are mainly of Malayan stock, with the Javanese the most advanced.

Agriculture engages about 70 percent of the adult males. Rich in a variety of crops, the islands prior to World War II produced about 31 percent of the world's copra, 37 percent of its rubber, 83 percent of its pepper, and nearly all of its quinine. The big-estate agriculture on Java and Sumatra is devoted mainly to export. The rest is subsistence agriculture. Rice is the staple food and chief crop, with 1935-40 average production for Java and Madura alone about 306,930,000 bushels. Sugar cane, rubber, tea, coffee, tobacco and quinine are the leading estate products. Corn, kapok, agava fiber, tapioca, spices, fruits and vegetables are also main crops. Livestock, important to the natives, included in 1940 a

total of 3,175,000 carabaos, 4,600,000 cattle and 710,000 horses. Political conditions thus far have rendered impossible the compilation of definite postwar statistics, but crop production in early 1947 approached 1940 levels, with the exception of sugar, tea and pepper.

MAJOR AGRICULTURAL PRODUCTS,

1940

Crop*	Metric tons
Sugar cane	1,587,364
Rubber	546,021
Palm oil	241,702
Tea	81,986
Coffee	77,647
Tobacco	27,414
Quinine	16,371
Cacao	1,553

*Complete rice statistics not available.

Industry, especially in Java, developed rapidly after 1930. In addition to industries connected with the processing of the rich natural products, there were established chemical works, textile and paper mills, soap factories, breweries, shipyards, a Goodyear tire and rubber plant and a General Motors assembly plant. In 1940 there were 5,469 manufacturing plants with 288,941 workers. Cottage industries, mainly on Java, also are important.

Exports in 1946 totaled \$58,946,552 (1939: \$394,479,000), of which almost half was rubber, followed by petroleum, copra, tin, oils and spices. Complete import statistics were not available in 1947 (1939: \$250,460,000), but the adverse trade balance was heavy. The U. S. and the Netherlands each took over 40 percent of the exports.

In 1940 there were 43,450 miles of road, mostly in Java and Sumatra; and 4,620 miles of railway, of which 3,387 were in Java and 1,233 in Sumatra.

The last prewar budget, scheduled for 1942, anticipated revenue of 750,918,773 guilders, and expenditure of 813,802,815 guilders. The national debt in 1940 was \$763,593,868.

Oil is the principal mineral product of the Netherlands Indies. The fields, in Sumatra, east Borneo and east Java, produced 62,100,000 barrels in 1939, which was 3 percent of the world total. In 1945, production was estimated at 42,000,000 barrels.

The islands' output of 30,100 tons of tin in 1939 amounted to 16 percent of the world supply, but the chief mines were inoperative in 1946. Other mineral production includes coal, gold, bauxite, silver, asphalt, sulfur, diamonds and manganese.

Forests, covering a large part of the islands, yield such products as timber, rattan, bamboo, gum, wild rubber, gutta-percha and quinine. The principal timber is teak, found mostly in east Java. Ebony, sandalwood and ironwood also are cut.

TOPOGRAPHY AND CLIMATE. A backbone of high mountain ranges with many snow-capped peaks extends throughout the main islands of the archipelago. Earthquakes are frequent, and there are many active volcanoes, 90 of them in Sumatra. Borneo and New Guinea are heavily forested, with interiors that are difficult to penetrate.

The climate throughout the group is equatorial and monsoonal, with little variation of temperature (yearly average about 80°; at Batavia, 79°) and rainfall averaging over 100 inches a year. In Sumatra and Java the hot and rainy season usually lasts from May to October; December and January are relatively cool and dry; February, March and April, hot and dry.

Nicaragua (Republic)

(República de Nicaragua)

Area: 57,143 square miles.

Population (est. 1943): 1,048,642 (mestizo, 69%; white, 17%; Negro, 9%; Indian, 5%).

Density per square mile: 18.3.

President: Victor M. Román y Reyes.

Principal cities (est. 1943): Managua, 124,357 (capital); León, 70,000 (trading, railroad center); Matagalpa, 47,966 (coffee center); Jinotega, 35,922.

Monetary unit: Córdoba.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Nicaragua was first visited by the Spaniards in 1522. The chief of the country's leading Indian tribe at that time was called Nicaragua, from whom the nation derived its name. The country was part of Spanish Guatemala until the general Central American revolution in 1821. Upon the dissolution of the Central American Union in 1838, Nicaragua established itself independently. A United States naval force intervened in 1909 after two American citizens had been executed, and a few U. S. Marines were kept in the country from 1912 to 1925. The Bryan-Chamorro Treaty of 1916 gave the United States an option on a canal route through Nicaragua, and naval bases in the Gulf of Fonseca on the Pacific coast and on Corn Islands on the Atlantic side. Disorder after the 1924 elections brought in U. S. Marines again, but they were withdrawn gradually after the U. S.-supervised elections of 1928, although sporadic fighting continued between government troops and rebel forces under General Augusto Sandino. Juan B. Sacasa was elected president in the U. S.-supervised elections of 1932, but he was forced to resign in 1936. General Anastasio Somoza, elected president in Dec., 1936, restored political and economic stability. Re-elected in 1939, he remains the virtual dictator. Dr. Leonardo Argüello was elected

president in Feb., 1947, but he was ousted on May 25, a little more than 3 weeks after taking office, by Gen. Somoza's forces, who installed a provisional president pending new elections.

GOVERNMENT AND DEFENSE. The constitution of 1939 provides for a president, popularly elected for six years, and a two-house Congress—a 40-member Chamber of Deputies and a 16-member Senate—both elected for six years. There are fifteen regional departments. Military service is voluntary. The Guardia Nacional, both an army and police force, numbers about 3,500. A naval base built at the Pacific port of Corinto by the U. S. during World War II was turned over to Nicaragua in 1946.

SOCIAL AND ECONOMIC CONDITIONS. Although primary education is free and compulsory, about 60 percent of the people are illiterate. There are three universities and several vocational schools. Primary schools in 1943 numbered 874, with enrollment of 59,335; 19 secondary schools had 1,315 students. Western Nicaragua, with about 75 percent of the population, is inhabited principally by mestizos of Spanish and Indian blood, with some whites and Indians. Negroes and Indians are dominant in eastern Nicaragua.

More than half of Nicaragua is jungle-covered; agriculture, the leading industry, utilizes only 10 percent of the total land. Coffee (1945: 13,227 tons) is the chief crop and grows in the western part, which also produces sugar cane, cacao, corn, beans, rice and tobacco. Bananas lead in the eastern part, with cotton second. About 900,000 acres are devoted to livestock grazing. Except for some sugar refining, only locally consumed products are manufactured.

Exports in 1946 totaled \$18,131,800 (1945: \$13,692,728), and imports \$14,822,775 (1945: \$12,651,615). In 1945, gold accounted for more than half the exports, and coffee about a quarter. Other items are bananas, timber, cotton, sugar, ipecacuauba and cacao. The United States took 61 percent of the exports and supplied 40 percent of the imports.

Gold (1944: 219,579 troy oz.) has surpassed coffee as the most lucrative export. Silver production in 1944 was 254,457 troy oz. One-third wooded, Nicaragua produces mahogany, rose wood, cedar, rubber and ipecac root. Log exports in 1946 were 10,-141,656 bd. ft. and lumber exports 9,469,-848 bd. ft. (mostly pine).

Good highways, long lacking, are now being constructed. Railways, mostly nationalized and limited to the west, were only 258 miles in 1944. TACA (Central American Airlines) and Pan American both supply air service. Corinto and San Juan del Sur, on the Pacific, are the chief ports.

The provisional budget for 1946-47 rec-

ommended expenditures of 77,359,707 córdobas (1945-46: 70,391,000 córdobas). The public debt on Dec. 31, 1946 was \$6,212,748. British investments on Dec. 31, 1946, were £349,280.

TOPOGRAPHY AND CLIMATE. Largest but most sparsely populated of the Central American nations, Nicaragua is mountainous in the west, with fertile valleys. A plateau slopes eastward toward the Caribbean. Two big lakes—Nicaragua, about 100 miles long, and Managua, about 38 miles long—are connected by the Tipitapa River. The Pacific coast is bald and rocky; the Caribbean coast, swampy and indented, is aptly called the "Mosquito Coast." The highlands have cool temperatures, while the coasts are hot and sultry. The east coast receives up to 100 inches of rain a year. The wet season is generally from May or June through November or December.

Norway (Kingdom)

(Norge)

Area: 124,556 square miles.

Population (est. 1946): 3,100,000 (Norwegian, 98.7%; Swedish, .8%; others, .5%).

Density per square mile: 24.8.

Sovereign: King Haakon VII.

Prime Minister: Einar Gerhardsen.

Principal cities (est. 1938): Oslo, 275,000 (capital, chief port); Bergen, 106,500 (seaport, shipbuilding); (est. 1936): Trondheim, 54,500 (seaport, timber, fish); Stavanger, 46,780 (seaport, fisheries).

Monetary unit: Krone.

Language: Norwegian.

Religions: Evangelical Lutheran (state), 96.8%; others, 3.2%.

HISTORY. Emerging in 1945 from the harsh German occupation of World War II, Norway faced the problem of rebuilding a shattered economy and of replacing the 50 percent losses suffered by its merchant shipping fleet, once the fourth greatest in the world. To achieve these goals, the government launched a five-year plan with the goal of full recovery planned for 1950. The country, about the size of New Mexico and the most thinly-populated nation of continental Europe, is one of the world leaders in fishing.

Norwegians, closely allied to the Swedes and Danes, are of Teutonic origin. In the 7th and 8th centuries, Vikings from Norway constantly attacked the British Isles, and in the 9th century many of them settled in what are now Eire and Normandy. Norway became a united kingdom in 872 under King Harald Haarfager. Christianity was introduced in the 10th century by King Olaf I.

Under the rule of Haakon IV (1217-63), Norway reached a peak of power, ruling the Shetland and Orkney Islands, Iceland, Greenland and the Hebrides. In 1319 Nor-

way and Sweden were united under King Magnus VII, and in 1397 Denmark joined this union under Erik of Pomerania.

In 1450 the triple bond gave way to a union in which Norway was closer to Denmark, but the Treaty of Kiel, in 1814 at the end of the Napoleonic Wars, ceded Norway to Sweden. Norway protested and declared itself independent. Sweden thereupon invaded Norway and forced the issue, requiring Norway to recognize the king of Sweden but leaving Norway its own government, army, navy and customs.

After this union was dissolved in 1905, Prince Karl of Denmark was elected king of Norway by the Storting (parliament) and ascended the throne as Haakon VII. During World War I, Norway was able to preserve its neutrality, though it suffered greatly from the Allied blockade and from the loss of many merchant ships. In World War II, Norway was invaded by the Germans on April 9, 1940, and resisted for two months before Nazi control was complete. On June 7, King Haakon and the government fled to London and established a government-in-exile.

Meanwhile, in Norway, a new word was born—quisling. It was derived from Major Vidkun Quisling, a Norwegian traitor who collaborated with the Germans and who was Minister President of the German-sponsored occupation government. Quisling eventually was executed by the Norwegians in October, 1945.

King Haakon and the government returned immediately after the German collapse in May, 1945, and an interim coalition cabinet took over, headed by Einar Gerhardsen. The latter's Labor party won a majority in the general elections of Oct. 8, 1945, and the all-Labor cabinet formed on Nov. 5, 1945, has since led the nation in its efforts to regain prewar normality.

King Haakon VII, born August 3, 1872, second son of Frederick VIII of Denmark, married Princess Maud (born 1869, died 1938), third daughter of Edward VII of England. Their one son—Olaf, Crown Prince, born July 2, 1903—married Princess Märtha of Sweden (born 1901) on March 21, 1929. Their children are Princess Ragnhild Alexandria (born 1930), Princess Astrid (born 1932) and Prince Harald (born 1937). King Haakon is the uncle of Frederick IX of Denmark.

GOVERNMENT AND DEFENSE. Norway is a constitutional and hereditary monarchy with succession in the direct male line. The king's executive power is exercised by a council of state, or cabinet, consisting of the prime minister and at least seven other councilors. The 150 members of the Storting are popularly elected for a term of 4 years under proportional representation. When assembled, the Storting divides itself by election into two sections, the Lag-

ting, composed of one-fourth of the members (38) and the Odelsting, composed of the rest. The Storting has a predominant position in the government since the cabinet is responsible to it. Moreover, the king cannot dissolve it before the expiration of its term. There is universal suffrage for all citizens male or female over 23.

The country is divided into 20 districts—18 counties (*Fylker*) and the cities of Oslo and Bergen. Other towns are formed into 65 communes.

The department of defense serves as a coordinating body for the army, navy and air force. The army is a national militia with compulsory service from 18 to 55. Army strength in 1947 was about 15,000 including 4,400 stationed in the British zone of Germany. The air force had 100 planes. The Navy on Dec. 31, 1946, had 7 destroyers and large torpedo boats, 5 submarines, 3 corvettes, 3 minelayers, 2 old coast defense ships and a number of smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory and free from 7 to 14. Illiteracy is almost unknown. In 1942-43, elementary schools had an enrollment of 297,770, and secondary schools had 35,523. The University of Oslo had an enrollment of 6,000 in Sept., 1946.

The endowed state religion to which the king must conform is Evangelical Lutheran. The king nominates the clergy of the established church, which takes a leading part in primary education. All other Christian religions are tolerated, except Jesuits.

From 1820 to 1920, more than 800,000 Norwegians emigrated, 96 percent of them to the United States.

The well-advanced social welfare program includes social security, introduced late in the 19th century, poor relief, care of mothers and children, schools for the blind, deaf and deformed, housing, training of social workers, and old-age pensions. Labor is protected by a number of acts which provide for vacations, arbitration of disputes, and unemployment, accident and sickness insurance. The cooperative movement is well-organized.

Land suitable for cultivation, estimated at less than 5 percent of the total area, consists of strips in the deep narrow valleys and around fjords and lakes. Food-stuff production is insufficient to meet domestic needs. Leading crops, with 1945 production in tons, are wheat (94,572), barley (88,919), oats (181,982), hay (2,330,175), potatoes (1,225,964) and fodder (826,021). Crop production in 1946 approached and in some cases exceeded prewar levels. The country is more adapted to stock raising than to crop growing; in 1945 there were 1,227,448 cattle, 937,010 sheep, 208,461 horses and 141,628 goats.

Raw materials produced in Norway form

the basis of most of the manufactures. In 1943 there were 4,928 industrial establishments with 146,652 workers and production valued at 2,506,079,000 kr. Leading industries were wood and paper, machinery and metals, food, and electro-chemicals. On March 31, 1947, 67 vessels of 87,950 tons were under construction in Norwegian yards. Industrial production in 1947 was on a prewar level.

Exports in 1946 were 1,164,000,000 kr. (1945: 328,017,000 kr.) and imports 1,943,000,000 kr. (1945: 1,206,338,000 kr.). The normally adverse trade balance is offset to some extent by invisible exports, particularly the earnings of the large merchant marine. Leading exports are fish and fish products, fertilizer, pulp and paper, base metals and ores and ore concentrates. Important imports are grains, fuel, meat, sugar and dairy products.

Norway is one of the greatest seafaring nations, and her merchant fleet of 1,630 ships of 3,288,000 gross tons (Jan. 1, 1947) is third largest in the world. Wartime losses amounting to 2,393,000 tons were the third highest among the United Nations. The long coast line and the difficulties of inland transportation make coastal shipping especially important, while shipping revenues yield important invisible exports. In 1944 there were 2,608 miles of railway, mostly nationalized, and 27,214 miles of highway.

Revenue and expenditures for the year 1947-48 were estimated to balance at 2,117,000 kr. The national debt on May 31, 1946, was 6,908,000,000 kr.

Mineral resources are extensive, but coal deposits are entirely lacking except in Spitsbergen. The most important minerals (1944 production, in tons) are iron (136,404), aluminum (22,085), pyrite ore (827,171), iron ore (361,996), nickel ore (15,389), zinc (12,982) and copper ore (22,333). Others are molybdenum ore, tungsten, tin and silver. Cheap electrical power makes possible the extraction of nitrogen from the air and the manufacture of potassium nitrate, an important fertilizer.

The forests, largely in the south and southeast, are one of the chief natural resources. About 25 percent of the total area is covered with forests, of which 70 percent is pine. Timber production in 1939 was 138,448,024 cu. ft., and production of all forest products amounted to 229,323,557 cu. ft. Most of the timber produced is consumed in the paper and the pulp industry.

Fishing is one of the principal industries, engaging as many as 100,000 persons annually. A large number of the best European food fisheries are situated along the coast. Norwegians are the world's leading whalers and were the first to develop pelagic (open sea) whaling. Whale-oil production in 1945-46 was 518,842 barrels.

MAJOR SEA PRODUCTS, 1943

Product	Amount, tons	Value, U. S. dollars
Coalfish (dressed)	13,355	\$ 814,343
Cod (dressed)	122,916	8,845,042
Herring	460,313	13,191,300
Sprat	13,684	1,176,362
Mackerel	7,293	1,049,898

TOPOGRAPHY AND CLIMATE. Nearly 70 percent of Norway is uninhabitable and covered by mountains, glaciers, moors and rivers. Its extreme length from the Skagerrak to North Cape—Europe's most northerly point, far above the Arctic Circle—is about 1,100 miles. Breadth averages 60 miles, with a maximum of 260. The hundreds of deep fiords that cut into Norway's coast line give it an over-all ocean front of more than 12,000 miles. Along the Swedish border are the rugged Kjölen (Keel) Mountains, and northeast of Bergen are the highest of Norwegian mountains, with Galdhøpiggen rising to 8,097 feet. Islands off the coast, numbering almost 150,000, form a breakwater and make a safe coastal shipping channel. The Lofoten and Vesterålen Islands, off the northwest coast, have an area of about 1,560 square miles and are a cod fishing center.

Norway has many rivers and lakes. Most of the rivers are short and swift, with numerous falls, and are invaluable as sources of hydroelectric power. By increasing the development of such power, Norway hopes to free itself from the necessity of importing coal, of which it has almost none.

The Gulf Stream affects the climate mildly. Summer temperatures range from about 50° in the extreme north to 60.8° at Oslo in July. February temperatures in Oslo average 24°, against 11°-12° in the north. Norway is one of the lands of the midnight sun; in the extreme north for many weeks in the summer the sun never sets, and for an equal time in the winter the sun does not rise. Rainfall is very heavy on the coast but decreases sharply inland.

OUTLYING TERRITORIES

SPITSBERGEN (SVALBARD).

This arctic archipelago, with an area of approximately 25,000 square miles, lies about 400 miles north of Norway and consists of West Spitsbergen (15,200 sq. mi.), North-East Land (about 6,000 sq. mi.), Edge Island (2,500 sq. mi.), Barents Island (580 sq. mi.), and several small islands including Bear Island. The group was probably discovered by Norwegians in A.D. 1194 and rediscovered by the Dutch navigator Barents in 1596. The question of sovereignty was long unsolved. By a treaty signed with the disputing nations on Feb. 9, 1920, however, Norwegian sovereignty was recognized, and Norway declared the area a part of the kingdom Aug. 14, 1925.

Spitsbergen was occupied by Allied forces in the summer of 1941. Soviet proposals for establishment of joint military bases were rejected by Norway in Feb., 1947.

In the 18th and 19th centuries, Spitsbergen was a whaling center, but now the only important product is coal (1940: 600,000 tons). The population, largely miners and none indigenous, numbered 2,225 in 1940-41.

JAN MAYEN ISLAND.

This arctic island (144 sq. mi.), lying between Greenland and the north of Norway, was discovered by Henry Hudson in 1607. It was annexed to Norway May 8, 1929. A Norwegian weather station was established in 1921, and during World War II a U. S. Navy weather station was maintained on the island. It is otherwise uninhabited.

OTHER TERRITORIES. Norway also exercises sovereignty over Bouvet Island (22 sq. mi.) in the South Atlantic, Peter I Island (94 sq. mi.) in the Antarctic Ocean, and that part of the Antarctic continent lying between 20 degrees and 45 degrees east. All are uninhabited.

Outer Mongolia (Republic)

Area: 580,158 square miles.

Population (est. 1941): 900,000 (Mongol, except for about 100,000 Russians and 50,000 Chinese).

Density per square mile: 1.55.

Ruler: Marshal Choy Bal-san.

Principal city: Ulan Bator Khoto (Urga), 100,000 (capital).

Monetary unit: Tugherik.

Languages: Mongolian, Russian.

Religion: Lama-Buddhism.

HISTORY AND GOVERNMENT. Outer Mongolia, known also as the Mongolian People's Republic, is a Russian satellite that measures more than twice the area of Texas. It contains the original homeland of the historic Mongols, whose power reached its zenith during the 13th century under Kublai Khan. The area accepted Manchu rule in 1689, but after the Chinese Revolution of 1911 and the fall of the Manchus in 1912, the northern Mongol princes expelled the Chinese officials and declared independence under the Khutukhtu or "Living Buddha." In 1921, Soviet troops entered the country and facilitated the establishment of a republic by Mongolian revolutionaries in 1924 after the death of the last Living Buddha. China, meanwhile, continued to claim Outer Mongolia but was unable to back the claim with any strength. Outer Mongolia significantly signed a military alliance with Russia in 1936 and a treaty of friendship in 1946.

Under the Chinese-Russian Treaty of 1945, China agreed to give up Outer Mongolia, provided that a plebiscite on independence be held first. The subsequent vote was announced as 483,291 to 0, in favor of independence. On Jan. 5, 1946, China recognized Outer Mongolia's independence.

The government of the republic is strikingly similar to the Soviet system. The Great Hural or Huruldan (parliament) is elected by universal suffrage, meets at least once in three years and picks 30 members to act as an executive committee—the Little Hural—which in turn selects seven members as an interim body. A cabinet of ten ministers governs the country. The only political party is the Mongol People's Revolutionary Party, formed in 1921 around a nucleus of young Soviet-trained Mongols. The army of several thousand is Russian-trained and equipped.

SOCIAL AND ECONOMIC CONDITIONS. A number of young Mongols are regularly sent to the U.S.S.R. for technical training. The capital, Ulan Bator Khoto, former holy city of the Mongols, has a radio station, several newspapers published in Mongolian, high schools, a university, medical schools, and a military school with Soviet advisers. In 1944, there were 285 primary, 36 secondary, 8 technical and 190 nomad schools in the republic.

All land, natural resources, factories, mines, hay-making stations and public utilities are nationalized.

The country is largely pastoral. There are few areas suitable for crop growing, but some millet, rye and wheat are produced. Most of the people are essentially nomadic or seminomadic; flocks and herds remain the chief source of wealth. In 1942 there were 1,340,000 horses, 270,000 camels, 1,500,000 oxen and 10,600,000 sheep.

There are a few industrial enterprises including a machinery factory, a brick factory and an electric power station all located at Ulan Bator Khoto; power plants, printing shops and automobile repair shops have also been established.

Foreign trade, a state monopoly, is carried on entirely with the Soviet Union. The only available trade statistics (1936) indicated exports valued at \$5,892,000 and imports valued at \$9,251,000. Leading exports are livestock, wool, hides, animal hair, meat and furs.

Although the old caravan routes are still used, and transportation is mainly by horse, camel or ox carts, a number of motorable roads exist (1938: 2,477 mi.) including a highway from Ulan Bator Khoto to the Siberian border town of Kyakhta. An airline also functions between Ulan Bator Khoto and Ulan Ude in the Buryat Mongol Autonomous S.S.R. which borders Mongolia on the north. No railways are

known to exist, but a line is projected between Ulan Bator Khoto and Kyakhta.

Reserves of 500,000,000 tons of coal are said to exist in the Nalaikha field near Ulan Bator Khoto. Production in 1938 was 71,650 tons. Some gold is mined. Deposits of antimony, copper, iron ore, lead, graphite, mercury, sulfur and silver exist.

TOPOGRAPHY AND CLIMATE. The productive regions of Outer Mongolia—a tableland ranging from 3,000 to 5,000 feet in elevation—are in the north, which is well drained by numerous rivers, including the Kerulen, Tola, Orkhon and Selenga. The climate is continental, with hot summers and cold winters. Mean temperature at Ulan Bator Khoto is 15° in January and 64° in July. Rainfall is light throughout the country, and almost negligible in the Gobi Desert in the southeast.

Panamá (Republic)

(República de Panamá)

Area: 28,575 square miles.

Population (1940): 622,576 (mestizo, 65.34%; Negro, 13.31%; white, 11.07%; Indian, 9.53%; others, .75%).

Density per square mile: 21.8.

President: Enrique A. Jiménez (provisional).

Principal cities (1940): Panamá City, 111,893 (capital and chief port); Colón, 44,393 (chief Caribbean port); Ciudad David, 9,222 (bananas).

Monetary unit: Balboa.

Language: Spanish (official).

Religion: Roman Catholic, 93%; Protestant, 6%; others, 1%.

HISTORY. Visited by Columbus in 1502 on his fourth voyage and explored by Balboa in 1513, Panamá was the principal transshipment point for Spanish treasure and supplies to and from South and Central America in colonial days. In 1821, when Central America revolted against Spain, Panamá joined Colombia, which already had declared its independence. For the next 82 years, Panamá attempted unsuccessfully to break away from Colombia. After U. S. proposals for canal rights over the narrow isthmus had been rejected by the Colombian Senate, Panamá proclaimed its independence with U. S. backing in 1903. U. S. Marines restrained Colombian intervention on the ground that the U. S.-Colombian treaty of 1846 gave the United States the right to keep the isthmus open.

For canal rights in perpetuity, the United States paid Panamá \$10,000,000, and agreed to pay \$250,000 (\$430,000 after devaluation of the U. S. dollar in 1933) each year. In exchange, the United States got the Canal Zone, a ten-mile-wide strip across the isthmus, and a considerable degree of influence in Panamanian affairs. Since 1903, Panamá's government generally has been

stable, with orderly presidential succession. Arnulfo Arias, a pro-Axis president, was ousted and exiled in 1941, and succeeded by Dr. Adolfo de la Guardia. Enrique A. Jiménez was elected provisional president in 1945 by the National Assembly, which later extended his term to Oct. 1, 1948.

GOVERNMENT. The National Assembly elected in May, 1945, was empowered to write a new constitution to replace the one suspended in 1941, under which the 32-member Assembly and the president were elected for six-year terms, with the president ineligible to succeed himself. Panamá has no army or navy, but has a national police corps numbering 2,000.

SOCIAL AND ECONOMIC CONDITIONS. Although education is free and compulsory between 7 and 15, illiteracy is very high in Panamá. In 1944 there were 648 primary schools with enrollment of 65,247; 12 public secondary schools with 5,417 students; and a national university in Panamá City with 850 students.

About five-eighths of the nation is unoccupied. A fourth of the population is in Colón and in Panamá City, the oldest white settlement on the Pacific coast of the Americas. In the cities, the lower classes are Negro and Negroid, descendants of British West Indian laborers on the canal. Once literally a pest hole from coast to coast, Panamá has been made into one of the healthiest of the tropical nations through U. S. sanitation methods introduced by Canal Zone officials.

Bananas are the main agricultural crop; others are cacao, tobacco, abacá, rubber, rice, coffee and sugar cane, all of which are exported, as are cattle, hides and gold. Imports in 1945 were \$45,648,125 (1944: \$37,904,620), and exports \$4,507,137 (1944: \$2,927,229). Textiles and food make up about 50 percent of imports, and machinery about 20 percent. The United States normally supplies over half the imports and takes 90 percent of the exports.

The Panama Canal is the country's biggest economic asset. About 37 percent of the 1945 national income was derived from the wages of Panamanians working in the Canal Zone, or from cash spent by U. S. civilian and military personnel in the Zone. The national budget for 1946-47 was estimated to balance at \$38,178,303. The external debt in 1946 was \$15,886,000.

The main railway is the U. S. Government-owned Panamá Railway, 48 miles long, bridging the isthmus from Panamá City to Colón. All rail mileage in 1945 totaled 457; highway mileage in that year was about 1,100. The canal attracts to Panamá the biggest shipping tonnage in Latin America, and shipping under Panamanian registry increased in 1946 to 400 vessels of 1,600,000 gross tons.

Minerals include gold, oil, copper and platinum near the Colombian border, but transit shortcomings have hampered development. Forest resources include mahogany, copaliba, sarsaparilla and ipecacuanha. Pearl fishing is a minor industry.

TOPOGRAPHY AND CLIMATE. Panamá, roughly the size of South Carolina, runs east to west for 420 miles from Costa Rica to Colombia, and has a maximum width of 118 miles, with 477 miles of Caribbean coast and 767 on the Pacific. At the narrowest and lowest point, the canal bisects the country. Outlying islands number about 630 in the Caribbean and 116 in the Pacific. Panamá steps up from coastal lowlands, with extremely heavy rainfall, to upland valleys and plateaus covered by dense forest and a few mountain peaks, some of them volcanic, near the Costa Rican border. Its many rivers are not navigable.

Paraguay (Republic)

(República del Paraguay)

Area: 154,165 square miles.

Population (est. 1945): 1,108,040 (Paraguayan, 97%; Indian, 3%).

Density per square mile: 7.19.

President: Higinio Morínigo.

Principal cities (est. 1943): Asunción, 126,280 (est. 1945: 172,400) (capital); Villarrica, 30,176 (sugar, tobacco); Concepción, 16,007 (port, Paraguay River); Encarnación, 15,610 (rail terminus).

Monetary unit: Guaraní.

Languages: Spanish (official), Guaraní.

Religion: Roman Catholic (official).

HISTORY. Paraguay, a landlocked South American country with a good river outlet to the South Atlantic, is about the size of Montana and, more often than not, is under the rule of a dictator-president.

In 1526 and again in 1529, Sebastian Cabot explored the area when he sailed up the Paraná and Paraguay Rivers. Domingo Martínez de Irala, a Spaniard, founded Asunción in 1537 and became the dominant figure in Paraguay for the next two decades. From 1608 until their expulsion from the Spanish dominions in 1767, the Jesuits maintained an extensive establishment in the south and east of Paraguay. In 1811 Paraguay revolted against Spanish rule and became a nominal republic under two consuls, one of whom, Dr. José Rodríguez Francia, ruled as absolute dictator until his death in 1840. His dictator successor, Carlos Antonio López, was succeeded in 1862 by his son, Francisco Solano López, under whose leadership Paraguay lost a good part of its population in a disastrous five-year war with Argentina, Brazil and Uruguay. In the succeeding decades, economic progress was handicapped by

revolution, intrigue and corrupt government. Paraguay remained neutral in World War I. Economic and financial exhaustion resulted from the war with Bolivia (1932-35), after which Paraguay was awarded three-fourths of the disputed Gran Chaco region (1938).

General José Félix Estigarribia, elected president constitutionally in 1939, was killed a year later in a plane crash. General Higinio Morínigo, elected president by the Council of Ministers in 1940, was the only candidate in the 1943 election. Soon thereafter, Morínigo seized dictatorial powers. Political conditions have since remained unsettled, with Morínigo maintaining a tenuous hold over the country.

A revolution which broke out in the summer of 1947 was finally put down after insurgents had gained control of part of the country.

GOVERNMENT AND DEFENSE. Since adoption of the 1940 constitution, Paraguay has been a semi-authoritarian republic which elects a president every five years by popular vote, and a one-house Congress on a population basis. There is also a Council of State, somewhat equivalent to an upper house, whose members are named by the government. The presidentially-appointed cabinet administers the government and is required merely to inform the Congress and Council of its policy.

The army numbers more than 8,000. Military service is compulsory for two years. For patrolling the Paraguay River, the country's life line, there is a navy of about 1,400 men with four gunboats. The budget share allotted to defense averages 50 percent.

SOCIAL AND ECONOMIC CONDITIONS. The illiteracy rate is unofficially estimated at 60 percent, one of the highest in South America. Education is free and supposedly compulsory. In 1946 there were 65,000 pupils attending 2,000 elementary schools. The University of Paraguay at Asunción had 1,300 students, and there were several normal and agricultural schools.

The Paraguayans are a homogeneous blend of Spanish, Portuguese and Italian, with considerable Guaraní Indian blood. There are almost no Negroes; the 35,000 to 50,000 uncivilized Indians live mainly in the Chaco. The country is 90 percent bilingual, with Guaraní dominating over Spanish (the official language) in rural areas.

A well-favored land, Paraguay is predominantly a cattle country, keeping about 3,500,000 head. The soil is fertile and the climate suitable for subtropical crops. The chief cash crop is cotton (acreage: 750,000; est. 1945 output: 29,762 short tons); the staple food crop is manioc. Other crops are rice, maize, yerba maté, tobacco, sugar,

peanuts and fruits. Oil of petit-grain, an important perfume ingredient, is extracted from the leaves of the bitter orange. Aside from the production of canned meat (1945: 15,450 short tons) and quebracho extract, the manufactures of the country are only slightly developed, but show steady growth.

Exports in 1945 were valued at \$23,000,000 (1944: \$13,700,000), led by canned beef (18%), quebracho tannic extract (16%), forest products and cotton (each 15%). Imports in 1945 were \$16,822,000. The chief customer in 1945 was Britain, followed by Argentina and the U. S. The principal supplier was Argentina, followed by Brazil and the U. S.

River traffic, the principal means of communication, is largely monopolized by a British-controlled Argentine company; plans were announced in June, 1946, for the formation of a Paraguayan-owned river fleet. The Paraguay River is navigable for vessels of 12 ft. draft to Asunción, principal shipping point, and Concepción; and for smaller vessels for its entire length. The Alto Paraná is navigable for larger vessels for almost its whole length. Railway mileage in 1946 was 1,044. Highways, generally poor, totaled 3,760 miles in 1944.

Domestic air service is furnished by the nationalized Línea Aérea de Transporte Nacional (LATN).

The 1947 budget called for expenditures of 56,129,000 guaraní, with an indicated deficit of 9,200,000 guaraní. The national debt in 1945 was about \$22,000,000, since increased by \$12,000,000 in credits from the U. S. and Brazil. U. S. direct investments in 1940 were \$5,037,000; British investments on Dec. 31, 1946, were £2,821,350.

Paraguay's mineral deposits are small, except for manganese in the near-inaccessible northeast. In the western Chaco, a U. S. oil company has been exploring for oil. Forest resources are considerable, especially in the Chaco. Quebracho—the "Axe-breaker," a wood so heavy that it will not float—is the principal commercial tree. The wood has many uses, from paving blocks to ox-cart wheels. Quebracho tannic extract (1945 exports: 32,500 short tons) is the chief product. Its export is limited by agreement with Argentina, also a heavy producer.

TOPOGRAPHY AND CLIMATE. Eastern Paraguay, between the Paraná and Paraguay Rivers, is upland country with the thickest population settled on the grassy slope that inclines toward the Paraguay River. The greater part of the Chaco region, to the west, is covered with marshes, lagoons, dense tropical forest and jungle. In the east, the temperature averages about 81° in summer (December–February) and 64° in winter (May–August). From Asunción, with an annual average greater than 60 inches, the rainfall decreases in the west.

Peru (Republic)

(República del Perú)

Area: 482,133 square miles.

Population (est. 1945): 7,719,276 (white and mestizo, 53%; Indian, 46%; Asiatic, Negro and others, 1%).

Density per square mile: 16.0.

President: José Luis Bustamante y Rivero.

Principal cities (est. 1945): Lima, 657,824 (capital); Callao, 93,313 (port of Lima); Arequipa, 87,260 (commercial center); Cusco, 49,760 (ancient Incan capital); Trujillo, 42,875 (mining).

Monetary unit: Sol.

Languages: Spanish, Quéchua, Aymará (Indian).

Religion: Roman Catholic.

HISTORY. Peru, once part of the great Incan empire and later the major viceroyalty of Spanish South America, is more than three times the size of California. It was conquered in 1531–33 by Francisco Pizarro. On July 28, 1821, Peru proclaimed its independence, but the Spanish were not finally defeated until the Battle of Ayacucho on Dec. 9, 1824. For a hundred years thereafter the Peruvian course was rough. Revolutions were frequent, and a new war was fought with Spain in 1864–66. The dispute with Chile over Tacna and Arica was not finally settled until 1929, and war with Colombia over the Leticia Corridor was narrowly averted in 1931. Major economic development, mostly by foreign capital, began late in the last century. In World Wars I and II, Peru enjoyed cotton and copper booms. General Oscar Benavides became president in 1933 and vigorously set about suppressing popular rights and representative government. He was succeeded in 1939 by President Manuel Prado y Ugarteche.

Peru emerged from 20 years of dictatorship on July 28, 1945, with the inauguration of President José Luis Bustamante y Rivero after the first free election in many years. However, the change to a regime in which political prisoners were freed and the press was free to criticize, was soon tempered by factional troubles within the government. As a result, in a cabinet reorganization of Jan. 12, 1947, three members of the leftist APRA party, which had contributed largely to Bustamante's election, were eliminated.

GOVERNMENT AND DEFENSE. Under the 1933 constitution, Peru elects by popular vote every six years a president, two vice-presidents and a bicameral Congress—a Senate of 48 members and a Chamber of 148 members. The president is ineligible to succeed himself. The cabinet, headed by the prime minister, is presidentially appointed, while Supreme Court judges are elected by the Congress from a presidential list. The central government names the executives of the 24 departments.

Military service is compulsory at the age of eighteen. The army had about 27,500 men in 1947. The air force, with 1,935 men and 90 planes in 1940, received 50 U. S. lend-lease craft in 1942. The 1947 navy had two old cruisers, two destroyers, four submarines, six river gunboats and smaller units. There are about 10,000 police and civil guards.

SOCIAL AND ECONOMIC CONDITIONS. Peru, once the cultural center of Spanish South America, had a 1944 illiteracy rate of 58 percent. Education between 7 and 14 is free, compulsory and state-controlled. Primary schools numbered 7,647 in 1944 and enrolled 717,000, while 61 State secondary schools had 12,474 students. Secondary education is also offered in about 100 schools of religious orders. Five universities had 8,282 students in 1943, including the University of San Marcos, founded in 1551 (oldest in America) with 6,241. In 1946 the government announced an ambitious five-year plan for building new schools.

The Roman Catholic church is protected by the government, and its religious instruction alone is permitted in the schools.

Most Peruvians are of mixed Spanish and Indian blood. The Indians come from three main stocks—Quéchua, Aymará (Colla) and Chunchu. In 1939 Peru had 63,805 foreigners, including 22,738 alien Japanese and 16,356 Chinese.

Compulsory social security, established in 1936, covers illness, maternity, disability, old age and death; benefits are steadily being extended.

Land under cultivation is estimated at about 3,617,000 acres, or 12 percent of the total area, with more than 80 percent of the population being dependent upon agriculture. About one-eighth of the cultivated area in the irrigated coastal valleys of the central region is devoted to cotton, the most important crop (1945 production: 169,000 short tons). Sugar (1946: 416,000 short tons), rice, tobacco and coffee are exported, while wheat, corn, potatoes, beans, barley and quinoa (a grain similar to millet) are subsistence crops. Stock-raising, pursued in the Pacific highlands and the elevated parts of the Amazon slope, supplies most of the country's meat needs, as well as wool, hides and skins for export. Llamas, used as beasts of burden, and vicuñas and alpacas, noted for their wool, are native to Peru. Livestock in 1945 was estimated at 14,007,213 sheep, 2,248,517 cattle and 952,198 goats.

Industrialization has been slow. Aside from the copper smelters and oil refineries, the greatest progress has been made in the textile industry, which obtains its raw materials from domestic cotton and wool and from imported silk.

Imports in 1946 totaled 802,306,000 soles,

and exports 983,583,000 soles. The chief suppliers are the U. S., Argentina, Britain and Brazil; the chief customers, the U. S., Chile, Britain and Uruguay. Principal imports are foodstuffs, machinery, motor vehicles, iron and steel products, chemicals and drugs; the chief exports, sugar, cotton, copper and petroleum.

Highway mileage in 1946 totaled 18,500, of which more than a third is hard-surfaced; the Pan-American highway had a total Peruvian length of 1,818 miles. Railway mileage was 2,800, much of it over difficult territory. Several lines supply domestic and international air service. There are more than 5,400 miles of navigable tributaries of the Amazon in eastern Peru; the chief Amazon port is Iquitos, 2,653 miles from the Atlantic.

The 1946 budget authorized expenditures of 716,498,200 soles. The proposed 1947 budget contemplated expenditures of 947,500,000 soles. The public debt in 1945 was 1,524,000,000 soles. Foreign capital has played a large part in Peruvian economic development. British investments on Dec. 31, 1946, were \$28,519,904; American direct investments in 1940, \$81,597,000.

Peru has vast mineral resources. It ranks third in world silver production and mines about 25 percent of the world's vanadium. But mining is second to agriculture, and nearly all of it is in the hands of foreign capital. Petroleum and copper are the most important, with the latter controlled by the American-owned Cerro de Pasco Corporation, which also accounts for much of the gold and silver output. In 1945, gold production was 180,000 oz., silver 16,080,000 oz., copper 31,700 short tons and vanadium 684 tons. Petroleum production in 1946 was 11,393,757 barrels; discovery of rich new deposits has been reported. Total mineral production in 1944 was valued at 390,000,000 soles.

Forest products include rubber (1943 exports: 1,065 tons), balata, raw guanine (1945 exports, all U. S.-bought: 849,160 kg.), vegetable ivory, mahogany, cedar, dye woods and coco, the source of cocaine. An important industry on the outlying islands is the gathering of guano (bird excrement), a valuable fertilizer used almost entirely domestically.

TOPOGRAPHY AND CLIMATE. The Andes Mountains divide Peru into three sharply differentiated zones. To the west is the coastland, much of it arid, extending for 50 to 100 miles inland, and 1,400 miles long. The mountain area, with peaks over 20,000 feet high, lofty plateaus and deep valleys, lies centrally. Beyond the mountains to the east is the heavily forested slope leading to the Amazonian plains.

The climate ranges from tropical in the eastern lowlands to arctic among the snow-capped peaks. The coastal area has

an average annual rainfall of less than 2 inches and temperatures ranging between 55° and 98°. Temperatures range from 75° to 95° in the humid Montaña, and rainfall between 75 and 125 inches annually.

The Philippines (Republic)

Area: 114,400 square miles.

Population (est. 1946): 18,400,000 (Filipino except [1940] 117,461 Chinese, 29,262 Japanese, 8,739 Americans and 11,515 others).

Density per square mile: 157.3.

President: Manuel A. Roxas y Acuña.

Vice President: Elpidio Quirino.

Principal cities (census 1939): Manila, 623,492 (capital, chief port); Cebu, 146,817 (seaport); Zamboanga, 131,455 (seaport); Davao, 95,546 (seaport); Iloilo, 90,480 (seaport); Ormoc, 77,349 (seaport).

Monetary unit: Peso.

Languages: Tagalog (official), English, Bisayan, Spanish.

Religions (census 1939): Roman Catholic, 78.7%; Aglipayan (Independent Philippine Catholic), 9.8%; Mohammedan, 4.2%; Protestant, 2.3%; others, 5%.

HISTORY. Fernando Magellan, the Portuguese navigator in the service of Spain, discovered the Philippines on March 16, 1521, and 21 years later a Spanish exploration party named the group of islands in honor of Prince Philip, later Philip II of Spain. Spain retained possession of the islands for the next 350 years, although the Moros in the southern islands continued to harass the Spanish troops until 1850.

The Philippines were ceded to the United States in 1899 by the Treaty of Paris after the Spanish-American War. Meanwhile the Filipinos, led by Emilio Aguinaldo, had declared their independence. They continued guerrilla warfare against U. S. troops until the capture of Aguinaldo in March, 1901. By July, 1902, peace was established in all parts of the islands except those inhabited by Moros.

The first U. S. civilian governor-general was William Howard Taft (1901-04). The Jones Law (1916) provided for the establishment of a Philippine legislature composed of an elective Senate and House of Representatives. The Tydings-McDuffie Act (1934) provided for complete Philippine independence in 1946. Under a constitution approved by the people of the Philippines May 14, 1935, the Commonwealth of the Philippines was inaugurated on Nov. 15 of that year, under the presidency of Manuel Quezon y Molina, who was re-elected in 1941.

The Philippines were invaded by Japanese troops on Dec. 8, 1941 (Philippine time), and after the fall of Bataan and Corregidor, President Quezon and his government fled to Washington. The Japanese-sponsored "Philippine Republic" received

little support from most Filipinos. U. S. forces led by Gen. Douglas MacArthur re-invaded the islands in Oct., 1944, and after the liberation of Manila (Feb., 1945), Sergio Osmeña, who had succeeded to the presidency on the death of Quezon (Aug. 1, 1944), re-established his government in the Philippines.

Brig. Gen. Manuel A. Roxas y Acuña, who defeated Osmeña in the elections of April, 1946, became first head of the new independent republic, which came into existence on July 4, 1946, as scheduled in the Tydings-McDuffie Act.

GOVERNMENT AND DEFENSE. Under the constitution of 1935 (as amended in 1940), the Philippines have a republican form of government based on that of the United States. Executive power is exercised by the president, popularly elected for a 4-year term and assisted by a cabinet appointed by him. The popularly elected Congress has two houses—the Senate with 24 members and the House of Representatives with 98 members.

The Philippine army is being reorganized and re-equipped with U. S. assistance. An agreement signed March 14, 1947, provided for the establishment, for a 99-year period, of 23 U. S. military, naval and air bases in the islands.

EDUCATION. In March, 1940, there were 12,057 public schools with a primary enrollment of 1,572,639; intermediate, 277,574; secondary, 90,579; collegiate (normal and technical) 3,777; total enrollment 1,944,569. The 439 private schools had a total enrollment of 149,491 in June, 1940. Of the 8,466,493 persons reported as engaged in gainful occupations in 1939, 3,912,580 were listed as literate and 4,546,496 as illiterate; 7,417 were unreported. Fewer than half of the children of school age attended school in 1940.

AGRICULTURE AND INDUSTRY. Agriculture is the chief industry. The last census (1939) showed 1,634,726 farms with a total area of 16,531,716 acres (about 22 percent of total area), of which 9,769,669 acres were under cultivation. The average size of the farms was 10.11 acres, but there were many large plantations. Rice (palay), the staple native food cereal, occupied 43.3 percent of the cultivated area in 1938, but production is insufficient to meet home consumption. The Philippines normally produce about half the world copra supply and a large proportion of the abacá (Manila hemp) supply; they are also a leading source of sugar and sugar products, which form the chief export. Other crops include sisal, kapok, cotton, coffee, rubber, cacao, citrus fruits and bananas. Livestock in 1940 included 3,015,000 carabaos, the farmers' all-purpose animal (reduced by more than 50 percent in 1946); 1,396,000 cattle; 344,000 horses and 4,450,000 hogs.

MAJOR AGRICULTURAL CROPS, 1940

Crop	Acreage*	Tons
Abacá	1,254,760	148,000
Copra	1,588,210	768,000
Corn	1,736,410	522,321†
Rice	4,722,640	104,171,000 (bu.)‡
Sugar	563,160	1,084,000
Tobacco	185,250	35,407†

*1938. †1939. ‡1940-41.

Production of rice in 1946 advanced to 80 percent of prewar output, and some subsistence crops reached prewar production levels. Export crops necessary to economic recovery, however, made slow progress. The 1946-47 sugar crop was estimated to be only half of normal, with full recovery not expected before 1948 or 1949.

Industry had made some progress prior to World War II, but private manufactures were still in their infancy. Industrial establishments suffered serious damage as a result of the war. A start has been made in sugar, rope, cigar, cigarette and furniture factories, lumber and rice mills, and modern factories producing beverages, perfumes, cosmetics and other consumer's goods. Preparation of fine embroideries is an important home industry.

FOREIGN TRADE. Exports of Philippine products in 1946 (in Philippine pesos) totaled 106,057,387 (1940: 305,320,000)—not including re-exports of 22,317,662. Of the 1946 exports, about 73 percent went to the U. S., followed by France, Britain, Canada and Norway. Imports in 1946 totaled 591,717,149 pesos, of which 87 percent came from the U. S. and Hawaii. Imports in 1940 were valued at 269,462,542 pesos.

COMMUNICATION. Transportation facilities suffered especially severe damage during World War II. The inter-island trade—extremely important because of the makeup of the archipelago—was served in 1937 by 2,907 vessels licensed for domestic trade, 1,545 for coastwise trade and 1,362 for bay and river traffic. The port of Manila has ample facilities for ocean-going vessels. Railway mileage (1941) totaled 844, most of which (712 mi.) was on Luzon. Highways totaled 10,925 miles in 1939, of which 6,127 were improved.

MINERALS, FORESTS AND FISHERIES. The Philippines possess large but relatively undeveloped mineral resources. Most important is gold, production of which rose from 160,620 oz. in 1929 to 1,097,000 oz. valued at \$38,282,000 in 1940. Most of the mines in production are lode mines. Also important are silver, iron ore, copper ore, chromite, manganese ore, lead and zinc. Petroleum formations are also known to exist. Mining has been slow to recover from the effects of World War II.

The forest area is estimated at more than 43,700,000 acres (about 58 percent of

the total area), not including 3,200,000 acres covered with cogón grass, fit for grazing. About 97.5 percent of the total forest area is government-owned. The volume of standing commercial hardwoods and softwoods was estimated at 464,740,000,000 board feet in 1941.

Of the approximately 1,900 different species of fish, only about 100 kinds are marketed, although a majority are edible. Fish exports are chiefly canned tunas.

TOPOGRAPHY. The Philippines are an archipelago of approximately 7,083 islands lying about 500 miles off the southeast coast of Asia and bounded on the west and north by the South China Sea, on the east by the Pacific, and on the south by the Celebes Sea. They extend north and south about 1,152 miles and east and west about 688 miles. The northernmost island, Y'Ami, is 65 miles from Formosa, while the southernmost, Saluag, is 30 miles east of Borneo. Only 466 of the islands have an area of more than one square mile, and only 2,441 have names. The largest islands are Luzon in the north (40,814 sq. mi.), Mindanao in the south (38,906 sq. mi.), Samar (5,124 sq. mi.), Negros (4,903 sq. mi.), and Palawan (4,500 sq. mi.). The islands are the tops of an irregular, submerged mountain chain which is largely of volcanic origin. The plains lying amid the mountains are the most densely populated portions of the islands, except in Cebu, where the people live mostly on the coastal plain. Extensive drainage systems are provided by the numerous short rivers.

CLIMATE. The temperature is warm throughout the year, averaging 80°, with only slight variations. Rainfall averages about 90-100 inches annually, with the wettest season occurring from June or July through October. Typhoons, often causing severe damage, originate in the Pacific and strike the islands from the east and southeast before curving north.

Poland (Republic)

(Rzeczpospolita Polska)

Area: 119,703 square miles.

Population (census 1946): 23,911,172 (Polish, German).

Density per square mile: 199.7.

President: Boleslaw Bierut.

Premier: Joseph Cyrankiewicz.

Principal cities (est. Sept. 1, 1946): Warsaw, 522,945 (capital); Łódź, 596,000 (industrial center); Kraków (Cracow), 305,000 (trading center); Poznań, 268,000 (farm products); Breslau (Wrocław), 168,000 (former German industrial center).

Monetary unit: Złoty.

Languages: Polish, German.

Religions: Roman Catholic, Jewish, Protestant.

HISTORY. A victim of aggression and partition throughout the ages, Poland found history repeating itself in World War II. Her area was reduced from that of California to that of New Mexico, and her population was cut by 11,000,000. Her people reeled from the combined effects of the cruel German occupation, a severe famine and general postwar instability. Her postwar government was in the hands of a small Soviet-supported Communist minority which allowed little democratic opposition. The Poland of 1947 could look forward to no other role in world affairs than that of a satellite of Soviet Russia.

Little of certainty is known about Polish history prior to the end of the 10th century. Early in the 11th century the Polish king, Boleslaus I (the Brave), ruled over Bohemia, Saxony and Moravia. His kingdom fell in the 13th century to the Tatars, who in turn were driven back by two orders of German knights—the Knights of the Sword and the Teutonic Knights—who spread Christianity along the shores of the Baltic. They created a state which included the district of Kulm and part of Poland, subject to the Holy Roman Empire. In 1259 Poland was invaded again by the Mongols, but the country recovered under King Wladislaus I (1306–33), who defeated the Teutonic Knights and reunited Great and Little Poland.

Poland reached its peak of power in the middle of the 15th century. The decline began at the end of that century when the nobles usurped the power of the people and soon reduced the country to anarchy. For 100 years the nobles fought among themselves and occasionally against Turks, Russians and Tartars. In 1683 John Sobieski became a great national hero by defeating the Turks near Vienna.

By the middle of the 18th century Poland was completely decadent and utterly disorganized. The first partition of the country was carried out in 1772 by Prussia, Russia and Austria; the second in 1793 and a third in 1795–96. For more than 100 years thereafter the Poles had no nation of their own and, when World War I broke out, they found themselves fighting on both sides.

The independence of Poland was formally proclaimed in Nov., 1918, and Marshal Josef Pilsudski was confirmed in office as President. In 1919, Ignace Paderewski, famous pianist and patriot, became the first premier. Russia attacked Poland in 1920 but the Poles, under Marshal Pilsudski and aided by the French, defeated the invaders. On May 12, 1926, Marshal Pilsudski seized complete power in a coup d'état and ruled the country dictatorially until his death on May 12, 1935, when he was succeeded by Marshal Edward Smigly-Rydz.

Despite a 10-year non-aggression pact

signed with Germany in 1934, Hitler attacked Poland on Sept. 1, 1939. Russian troops invaded from the east Sept. 17, 1939, and on Sept. 28 a German-Russian agreement was signed dividing Poland between Russia and Germany. Before leaving Poland, President Ignacy Moscicki resigned, designating as his successor W. Raczkiewicz; the latter formed a government-in-exile in France with Gen. Wladyslaw Sikorski as premier; this government moved to London after France's defeat in 1940. All of Poland was occupied by Germany after the Nazi attack on the Soviet Union in June, 1941. On July 30, 1941, Poland concluded an agreement with the U. S. S. R. voiding all German-Soviet agreements effected after Sept. 1, 1939.

The legal Polish government soon fell out with the Russians, however, and in July, 1944, a Communist-dominated Polish Committee of National Liberation received Soviet recognition. Moving to Lublin after that city's liberation, it proclaimed itself the Provisional Government of Poland on Dec. 31, 1944. After almost six months' negotiations, some of the former members of the Polish Government in London joined with the Lublin government to form the Polish Government of National Unity on June 28, 1945. Great Britain and the U. S. recognized this government on July 5, 1945, and withdrew recognition from the London government. A treaty of friendship, mutual assistance and postwar collaboration was signed between the Lublin government and the Soviet Union on April 21, 1945.

Democratic participation was negligible in the new government, which adhered strictly to Soviet foreign policy during 1946 and 1947, and pursued a policy of internal socialization. The government bloc controlled by the small Communist minority won a sweeping victory in the Jan., 1947, elections, which gave little opportunity to the opposition for campaigning or voting.

On Aug. 2, 1945, in Berlin, Prime Minister Attlee, President Truman and Generalissimo Stalin established a new *de facto* western frontier for Poland, along the rivers Oder and Lausitzer Neisse, pending the final peace treaty. On Aug. 16 the Soviet Union and Poland signed a treaty delimiting the Soviet-Polish frontier; the U. S. S. R. ceded to Poland two small areas east of the so-called Curzon Line, one about 50 miles northeast of Lwów and one in the Bialowieza forest. Under these agreements Poland was shifted westward. In the east it lost 69,860 square miles with 10,772,000 inhabitants; in the west it gained (subject to final peace conference approval) 38,986 square miles with a prewar population of 8,621,000.

GOVERNMENT AND DEFENSE. Poland is a republic headed by a president chosen for a seven-year term by the Parliament, which

consists of 444 members popularly elected. The administration of the government is carried on by a council of ministers headed by the premier.

The interim Constitution approved by Parliament on Feb. 20, 1947, provides for a five-member State Council with far-reaching powers and also gives the cabinet wide powers when Parliament is not in session.

Poland's army in 1947 numbered about 165,000 men, organized and equipped along Soviet lines with Soviet assistance. The air force had 400 planes, and the navy 2 destroyers, 4 submarines and a number of minesweepers and coastal craft. Unknown numbers of security troops organized in para-military formations maintain internal order under the direction of the Interior Ministry.

SOCIAL AND ECONOMIC CONDITIONS. In the school year 1945-46 there were 18,243 primary schools (1938-39: 28,881) with 3,004,007 pupils (1938-39: 4,953,000). No figures were published for the secondary schools, which in 1938-39 numbered 784 with 197,500 pupils. The three pre-1939 state universities of Warsaw, Kraków and Poznan, and the private (Catholic) university of Lublin re-opened in the fall of 1945. New universities have been founded at Lublin, Gdansk (Danzig), Breslau (Wrocław), Torun and Łódz. Students enrolled in 1946 numbered about 60,000.

Poland remains essentially an agricultural country: the areas now under *de facto* Polish administration in the west accounted for 25 percent of Germany's prewar food production. About 55 percent of postwar Poland is arable land. Much of it has been divided into small farms under the land reform program. Farming conditions continued to be disturbed in 1946-47, with the peasants living on a subsistence basis and the greatly reduced city populations near the lower margin of existence.

Agricultural production figures in 1945, in short tons (1938 in parentheses) were: rye, wheat and barley, 6,359,000 (11,901,092); potatoes, 13,920,000 (38,093,504); sugar beets, 114,000 (3,485,914). The number of cattle in 1946 was about 40 percent of the 1938 level (10,600,000); horses, 30 percent (3,900,000); and pigs, 23 percent (7,700,000).

Poland's industrial facilities, although severely damaged during World War II, were not greatly affected by territorial concessions to the U. S. S. R., with the exception of the Lwów area. On the other hand, important industrial areas, especially Silesia and Stettin, are located in the German territories under *de facto* Polish administration. Prewar Poland had more than 22,000 larger industrial establishments. All the key industries have now been nationalized or placed under State

control, and a planned economy has been introduced as part of the government's drive to make Poland an industrial nation. The average monthly production of steel in 1946 was 104,500 short tons (75% of 1938); cotton yarn 3,821 (64%), artificial fertilizers 15,211 (97%), woolen yarn 337 (33%) and electric energy 446,000,000 kw (134%).

Exports in 1946 were 9,730,000,000 zlotys and imports 10,600,000,000 zlotys. Leading exports include coal, paper, lead, zinc and textiles. Important imports are food, machinery, iron ore, cotton, wool and chemicals. Close trade relations are maintained with the U. S. S. R.

On Dec. 1, 1945, the Polish merchant marine numbered 30 vessels of 140,000 gross tons. The principal ports, both severely damaged, are Gdynia, with one of the largest harbors in Europe, and Gdansk (Danzig). Transportation facilities and rolling stock suffered heavy damage during World War II—a factor still hampering Poland's economic recovery in 1947. In 1945 Poland had 60,068 miles of public highway, 4,754 miles of inland waterways and 14,481 miles of normal-gauge railway.

The acquisition of large coal deposits in German Silesia (estimated at more than 5,000,000,000 tons), combined with already large reserves in the southwestern region, makes Poland one of the world's leading coal producers. The 1946 output was estimated at 51,700,000 tons. Iron ore deposits are located in the Kielce and Radom districts and in German Silesia. Zinc and lead ores are located chiefly in Upper Silesia and the voivodships of Kielce and Kraków. Prewar Poland's principal oil-producing areas, Boryslaw-Drohobycz, are in the territory ceded to the Soviet Union; 1946 production was 860,000 barrels (about 25% of prewar). Among other deposits, Poland possesses copper, sulfur, chalk, clay, kaolin, marble and granite.

Forests covered 24 percent of prewar Poland, but important forest resources are located in the territory ceded to the Soviet Union.

TOPOGRAPHY AND CLIMATE. Most of Poland is a plain with no natural boundaries except the Carpathian Mountains on the south and the Oder and Neisse rivers on the west. Pomerania is traversed by a range of low hills, while south of Gdansk is a maze of marshes, sand dunes and muddy lakes which extend into Polish East Prussia (Mazuria). The central Polish plain, 300 to 450 feet above sea level and intersected by great rivers, lies south of the flat country along the Baltic shore. Southern Poland and Silesia are hilly regions, while on the right bank of the Vistula is the plateau of Lublin.

Poland's climate is dependent upon her

proximity to the Baltic and to the Carpathian Mountains. Abundant rainfall (annual average: 22.8 in.) is caused by the predominating western oceanic winds. Snowfall is not heavy, but temperatures below zero are not uncommon, and the rivers are generally icebound for two and a half to three months each year.

Portugal (Republic)

(República Portuguesa)

Area: 35,413 square miles.

Population (est. 1945): 8,132,942 (practically all Portuguese).

Density per square mile: 229.5.

President: António Oscar de Fragoso Carmona.

Premier: António de Oliveira Salazar.

Principal cities (census 1940): Lisbon (Lisboa), 709,179 (capital, seaport); Oporto (Pôrto), 262,309 (seaport, port wine); Funchal (in Madeira Islands), 54,856 (Madeira wine); Coimbra, 35,437 (university); Setúbal, 35,071 (seaport, sardines).

Monetary unit: Escudo.

Language: Portuguese.

Religion: Roman Catholic.

HISTORY. Rolling and rugged Portugal is about the size of Indiana and, thanks to the days when its sailors and explorers were among the world's most venturesome, has a colonial empire 23 times the area of the homeland. A traditional ally of Britain, Portugal remained neutral in World War II but gave the Allies the right to use vital island bases in the Atlantic. Politically, Portugal is a virtual dictatorship; opposition is officially suppressed, and many phases of the national life are strictly regimented.

Portugal was part of Spain until it won independence in 1143 with Alfonso I as the first king. During the long reign of King John I (1385-1433), a great commercial empire was built, largely through the exploratory hobby of the king's son, Prince Henry the Navigator. Bartholomeu Diaz explored Africa's west coast and reached the Cape of Good Hope in 1488. Vasco da Gama circled the Cape and discovered the water route to India in 1497-99. Portugal's empire reached its crest about 1540, when it embraced the coast of Brazil, east and west Africa, Malabar, Ceylon, Persia, Indo-China and Malaya.

In 1580-81 Spain and Portugal were joined in a personal union under Philip II of Spain. Portugal revolted in 1640 and set up a new dynasty under John IV, Duke of Braganza, but the country never recovered its position as one of Europe's major powers. In 1806, when Portugal refused to obey Napoleon's orders that all continental ports be closed to British ships, Napoleon's forces invaded the country but

were ousted in 1811 by British and Portuguese forces under the Duke of Wellington. The royal family had fled to Brazil in 1807 but following an uprising at home, the king, John VI, returned to Portugal in 1821.

Brazil declared its independence in 1822 and John's son, Pedro, became emperor of the new state as Pedro I. In 1832, Pedro I, who had abdicated as emperor of Brazil in 1831, returned to Europe and led an uprising with British assistance in favor of his daughter, Maria II, displacing his younger brother, Miguel I, who had been proclaimed king in 1828. The descendants of Maria's marriage with Ferdinand of Saxe-Coburg ruled Portugal until 1910, when King Manoel II was forced into exile by a republican revolt.

On June 19, 1911, the monarchy was abolished, and a republican constitution was introduced. Portugal proclaimed its loyalty to the British alliance upon the outbreak of World War I, and Portuguese troops fought both in Africa and on the Western Front. There was much internal political instability during and immediately after the war.

On May 30, 1926, a revolution led by the army deposed the president and set up a military dictatorship. General António Oscar de Fragoso Carmona became premier and acting president Nov. 29, 1926, and was elected president on March 25, 1928. Dr. António de Oliveira Salazar, who was appointed finance minister in 1928, founded the organization known as the National Union in 1930 and has been premier and dictator since 1932. His regime, while admittedly opposed to liberal or democratic principles, has brought political and economic stability to Portugal. President Carmona was re-elected in 1935 and in 1942. The general election for members of the National Assembly held on Nov. 18, 1945, was boycotted by the opposition, and the National Union was continued in office.

GOVERNMENT AND DEFENSE. Under the constitution of 1933 Portugal is a corporative republic. The president is popularly elected for a term of 7 years; the National Assembly of 120 members for a term of 4 years. There is also a corporative chamber which handles economic, social and some legislative matters; its 104 members are representatives of local autarchies and of the several branches of social activities—administrative, moral, cultural and economic. The Assembly theoretically may overrule the president's veto by two-thirds vote. The president appoints the premier, who in turn selects the cabinet; the latter is not responsible to the National Assembly.

Military service is compulsory; the initial training period is 6 years, but not all

those liable for duty are called up. The army had about 65,000 troops on active duty in 1947; the air force had 575 planes. The navy on Dec. 31, 1946, had 5 destroyers, 3 submarines, 6 sloops and several smaller craft. Naval personnel numbers about 6,000.

SOCIAL AND ECONOMIC CONDITIONS. The illiteracy rate in 1940 was 49.03 percent. Compulsory education was introduced in 1911. Elementary schools in 1943 numbered 7,714 with 542,925 students. Secondary schools numbered 42 with 15,346 students. Private elementary schools were attended by about 45,000 pupils, and private secondary schools by about 17,000. There were three universities (Coimbra, Lisbon, Oporto) with 9,927 students.

Portugal's corporate state has a planned economy in which each producing unit regulates itself in the interest of the nation. Corporate units have been established in agriculture, industry and finance. As an example, the government controls the wine trade by means of a federation of growers and a guild of exporters.

Sixty percent of Portugal's people are engaged in agriculture. Although wheat is the leading crop, it is insufficient to meet domestic needs, and grain must be imported. One of the world's leading wine-makers, Portugal produces two famous kinds—Port in the vicinity of Oporto, and Madeira in the islands of the same name. In olive oil production, Portugal ranks third in the world (production 1944: 39,-850 tons).

Leading crops in 1945, in short tons, were: wheat 325,110, corn 132,944, oats 81,-344, barley 73,224 and potatoes 692,000. Wine production in 1946 was approximately 221,000,000 gallons.

The livestock inventory in 1944 showed 3,889,875 sheep, 1,176,888 hogs, 80,675 horses, 1,196,232 goats and 6,161,065 poultry. Wool production in 1944 was approximately 70,800 short tons.

Portuguese manufacturing is largely limited to consumer's goods for domestic consumption. Besides the production of porcelain tiles, it includes a sizable textile industry in cotton, wool, silk, linen.

Exports for 1946 amounted to \$177,200,-000 (April, 1947: \$13,900,000). Imports were valued at \$265,000,000 (April, 1947: \$22,800,-000). Leading exports in 1945 were wines, 20.5 percent; unmanufactured cork, 15.4 percent; sardines, 14.6 percent, and olive oil, 6.4 percent. Chief imports were coal and coke, raw cotton and wheat. The United Kingdom (17.7 percent) and the U. S. (17 percent) were Portugal's chief customers, and also her two main suppliers.

The merchant marine in 1943 had 945 vessels of 316,000 gross tons. In 1945, 6,011 vessels of 7,563,947 tons entered Portu-

guese ports. Railway mileage in 1945 was 2,191, and first and second class roads 9,180. Portugal is an important international air center.

Ordinary revenue in 1946 was estimated at 3,018,000,000 escudos, extraordinary revenue at 1,363,000,000, ordinary expenditure at 3,017,000,000 and extraordinary expenditure at 1,363,000,000. The public debt (Dec., 1944) was 9,389,000,000 escudos. Portugal has been noted under the Salazar regime as one of the few nations with a regularly balanced budget.

Mineral resources have not been fully developed, but wolfram, coal, iron ore, copper, manganese, iron pyrites, lead, tin and other ores are found. The coal output in 1945 was 641,000 short tons, manganese ore 8,900 tons and pyrites 190,000 tons. Wolfram, extremely important during World War II, totaled 3,300 tons in 1944.

Portugal is one of the world's leading producers of cork; exports in 1946 were 208,000 tons. The production of resin (1944-45: 21,000 tons) and of turpentine (5,150 tons) is also important.

The fishing industry is a basic part of the national economy, employing 42,000 men and 15,600 boats in 1944. Of special importance is the sardine industry centered at Setúbal, south of Lisbon. The sardine catch in 1943 was 146,521 tons valued at \$12,551,634.

TOPOGRAPHY AND CLIMATE. Portugal occupies a rectangular area about 360 miles long and 140 miles wide in the southwestern part of the Iberian Peninsula. It is crossed by many small rivers, and also by three large ones which rise in Spain, flow into the Atlantic, and divide the country into three geographic areas. The Minho (Mifio in Spain) River, part of the northern boundary, cuts through a mountainous area that extends south to the vicinity of the Douro (Duero) River. South of the Douro the mountains slope to the plains about the Tagus (Tejo) River. The remaining division is the southern one of Alentejo.

The Azores, stretching over a distance of 400 miles in the Atlantic, consist of 9 islands divided into three groups, with total area of 888 square miles. The nearest continental land is Cape da Roca, Portugal, which lies 800 miles to the east. The Azores are an important station on Atlantic air routes, and both Britain and the United States established air bases there during World War II. Madeira, consisting of two inhabited islands, Madeira and Porto Santo, and two groups of uninhabited islands, lies in the Atlantic about 535 miles southwest of Lisbon. Total area of the Madeiras is 314 square miles.

Portugal's climate is equable and temperate, but in the deep valleys where the

Mountains keep out the cool winds from the Atlantic, it is excessively hot in summer. Lisbon, Coimbra and Oporto all have mean temperatures of 60° to 61.5°. Heavy fogs are common along the coast. Rainfall has been as great as 16 feet a year. It is heaviest in the north and on the Serra da Estrela.

PORTUGUESE COLONIAL EMPIRE

	Area, sq. mi.	Population, census 1940
AFRICA		
Angola (Portuguese West Africa)	487,788	3,740,787
Cape Verde Islands	1,539	181,489
Mozambique (Portuguese East Africa)	297,654	5,085,630
Portuguese Guinea	13,944	351,089
São Tomé and Príncipe Islands	372	60,490
ASIA		
Macao	5	340,260
Portuguese India	1,538	624,177
Timor	7,330	480,000*

*Estimate 1938.

The status of the Portuguese overseas colonies is fixed by the Colonial Act of July, 1930, included in the constitution approved March 19, 1933. Each colony has a governor or governor general, appointed by the council of ministers for an initial 4-year term and responsible to the minister for the colonies at Lisbon. Each colony has financial and administrative autonomy.

ANGOLA (Portuguese West Africa)—Status: Colony.

Capital: Loanda (pop. 1940: 61,028).

Governor general: José Agapito da Silva Corvalho.

Foreign trade (1945): exports, 645,525,000 escudos; imports, 587,750,000 escudos. Chief exports: diamonds (15%), corn, coffee, sugar.

Agricultural products (1945 exports): corn (116,676 tons), cane sugar (40,796 tons), coffee, beans, groundnuts, palm kernels, rice.

Minerals: diamonds (1945: 786,000 carats), lignite, copper.

Forest products: beeswax, timber.

Industries: sugar, palm oil, whale oil, fish oil.

Angola stretches along the west African coast for about 1,000 miles from Belgian Congo to the Cunene River. Outside of a coastal plain varying in width from 30 to 100 miles, the colony is part of the great African plateau. The Angola coast and the Congo River were explored by the Portuguese in 1482-85, and Loanda was founded in 1576. Agreements concluded with the Congo Free State, Germany and France in 1885-86 (later modified in details) fixed the limits of the province except in the southeast, where the frontier was determined by the Anglo-Portuguese agreement of 1891 and the arbitration award of the King of Italy in 1905. The governor general is assisted by a council of 10 (5

officials and 5 Portuguese nationals). There are 5 provinces.

Angola is primarily an agricultural country. Its varied altitude enables it to produce both tropical and temperate crops. Excellent grazing land exists in many parts of the colony, and there are more than 2,000,000 cattle. Railways total 1,477 miles, and primary roads 21,949 miles. The chief ports are Loanda and Lobito. The great majority of the population are of Bantu-Negro stock, mixed in the Congo district with the pure Negro. Europeans in 1940 numbered 44,083, and half-castes 28,305.

Mean annual temperature at Loanda is 74.3°; the cool season lasts from June to September, the wet from October to May.

CAPE VERDE ISLANDS—Status: Colony.

Capital: Praia.

Governor: João de Figueiredo.

Foreign trade (1945): exports, 151,100,000 escudos; imports, 165,750,000 escudos. Chief exports: salt (6,907 tons), preserved fish (640 tons).

Agricultural products: coffee, millet, castor oil, oranges, hides.

This group of 14 volcanic islands lying off the west African coast was discovered in 1456 by the Venetian captain Alvise Cadamosto, in the service of Prince Henry the Navigator. The island of São Vicente is an important coaling station on the South American route. The vast majority of the inhabitants are mulattoes (101,284 in 1943) and Negroes (51,070)—descendants of slaves brought to the islands from Africa by early settlers. Public slavery was abolished in 1854, and private slavery in 1876. Europeans in 1940 numbered 5,580.

Summer temperatures are high in the archipelago, ranging up to 90° near the sea. The rainy season lasts from August to October.

MOZAMBIQUE (PORTUGUESE EAST AFRICA)—Status: Colony.

Capital: Lourenço Marques (pop. 1940: 68,223).

Governor general: Gabriel Maurício Teixeira. **Foreign trade (1945):** exports, 521,875,000 escudos; imports, 768,900,000 escudos. Chief exports (in tons): cane sugar (502,203), copra (44,415).

Agricultural products (1942 in tons): sugar cane (77,850), coconuts (26,363), sisal (22,901), fruit (37,729), corn (31,959), cotton (1,055).

Minerals: gold, coal, graphite, mica.

Forest products: mangrove bark, timber.

Mozambique, stretching for about 1,430 miles along Africa's southeast coast, was discovered by Vasco da Gama in 1498, although the Arabs had penetrated into the area as early as the 10th century A.D. It was first colonized in 1505, and by 1510 the Portuguese were masters of all the former Arab sultanates on the east African coast. The boundaries with British Central and

South Africa were delimited in 1891, and with Tanganyika Territory in 1886 and 1890. By the Treaty of Versailles, following World War I, Portugal was allotted the Klonga triangle, formerly part of German East Africa. One of the four provinces—Manica and Sofala (87,454 sq. mi.)—was held by the Mozambique Company until 1942, when the Portuguese Government refused to renew its charter.

Agriculture is the chief industry. There are many large plantations, some of which are partially mechanized. Stockraising is hampered by prevalence of the tsetse fly.

Ninety-nine percent of the inhabitants are native Africans of the Bantu tribes. In 1940 there were 27,438 Europeans. There are 1,349 miles of railway and 16,667 miles of road, mostly unimproved. The chief ports are Lourenço Marques and Beira, which is also the port for Rhodesia. The principal river, the Zambezi, divides the colony in half.

The cool season lasts from April to August, and the rainy season from December to March. On the central coast the mean annual temperature is about 85°.

PORTUGUESE GUINEA—Status: Colony.

Capital: Bissau.

Governor: Manuel Maria Sarmento Rodrigues.

Foreign trade (1945): exports, 94,775,000 escudos; imports, 82,275,000 escudos. **Chief exports (in tons):** groundnuts (40,105), palm kernel oil (560).

Agricultural products: groundnuts, palm kernels, hides, rice.

Forest products: wax, timber.

This colony, lying on the west African coast and almost surrounded by French West Africa, was discovered in 1446 by the Portuguese Nuno Tristão and was separated from the colony of the Cape Verde Islands in 1879. It consists of a low-lying coastal region and 60 islands off the coast. The country is undeveloped economically, and most of the natives are farmers. There are no railways, but navigable rivers totaling over 1,000 miles are important trade arteries; there are also about 1,650 miles of roads. About two-fifths of the natives are Moslem; there were 1,419 Europeans in 1940. On the coast, temperature varies between 77° in January and 85° in May. The dry season lasts from December to May.

SÃO TOMÉ AND PRÍNCIPE—Status: Colony.

Capital: São Tomé.

Governor: Carlos de Sousa Gorgulho.

Foreign trade (1945): exports, 52,600,000 escudos; imports, 27,775,000 escudos. **Chief exports:** cacao, coffee.

Agricultural products: cacao, coffee, coconuts, copra, palm oil.

These volcanic islands, lying in the Gulf of Guinea about 150-175 miles off the west African coast, were discovered by the Portuguese in 1471. Most of the early in-

habitants were convicts and Jews from Portugal and slaves from Brazil and the mainland, but the bulk of the present inhabitants are Negro contract laborers from the mainland and Cape Verde engaged to work cacao plantations.

MACAO—Status: Colony.

Capital: Macao.

Governor: Albano Rodrigues de Oliveira.

Chief exports: fish, cement, preserves.

Manufactures: cement, preserves, firecrackers, vegetable oils, metal products.

Macao comprises the peninsula of Macao and the two small islands of Taipa and Colôane on the south China coast, about 35 miles from Hong Kong. Established by the Portuguese in 1557, it is the oldest European outpost in the China trade, but Portugal's sovereign rights to the port were not recognized by China until 1887, and its boundaries are still not delimited. The port has been eclipsed in importance by Hong Kong, but it is still a busy distribution center, and also has an important fishing industry employing over 40,000 people. It is notorious for its opium trade and gambling houses. Portuguese number about 4,000.

PORTUGUESE INDIA—Status: Colony.

Capital: Nova Góa (population 12,000).

Governor general: Vacant since Sept., 1947.

Foreign trade (1944): exports, 35,580,000 escudos; imports, 167,087,000 escudos. **Chief exports:** fish, spices, copra.

Agricultural products: cashew nuts, coconuts, spices.

Minerals: manganese, salt.

The colony consists of Góa and 3 islands on the Malabar coast of India; Damão and the territories of Dadará and Nagar-Aveli, on the Gulf of Cambay; and Diu, with the continental territories of Gocola and Simbor, on the coast of Gujarat. Góa, captured in 1510 by the Portuguese, later became capital of the whole Portuguese empire in the east. The native population is largely Hindu.

TIMOR—Status: Colony.

Capital: Dili (population 3,000).

Governor: Oscar Freire de Vasconcelos Ruas.

Foreign trade (1940): exports, \$166,000; imports, \$145,000. **Chief exports:** coffee, sandalwood, wax, copra.

Agricultural product: coffee.

Forest products: sandalwood, wax.

Portuguese Timor consists of the eastern half of the island of Timor in the Malay Archipelago, with the territory of Ambeno and two neighboring islands. It was first settled by the Portuguese early in the 16th century. In 1859 the island was divided between Portugal and the Netherlands, and boundary adjustments were effective in 1904. Fishing and copra manu-

facture are important; trade is mostly in the hands of Chinese, Malaysians and Arabs. The colony was occupied by Dutch and Australian troops in Dec., 1941, and by the Japanese in Feb., 1942. Both occupations received strong Portuguese protest.

Rumania (Kingdom)

(România)

Area (est.): 91,934 square miles.
Population (est. 1945): 16,500,000 (Rumanian, 74.9%; Magyar, 9.4%; German, 4.3%; Turkish, 1.9%; Gypsy, 1.8%; Ruthenian, 1.7%; Bulgarian, 1.3%; others, 4.7%).

Density per square mile: 179.4.

Sovereign: King Michael (Mihai) I.

Premier: Petru Groza.

Principal cities (est. 1945): Bucharest, 984,619 (capital); Cluj, 110,956 (Transylvanian industrial center); Jassy, 108,987 (trading center, Moldavia); Timisoara, 108,296 (western commercial center); Ploesti, 105,114 (oil).

Monetary unit: Leu.

Languages: Rumanian, Hungarian, German, Turkish.

Religions (1938): Eastern Orthodox, 67.4%; Jewish, 7.5%; Greek Catholic, 7.1%; Roman Catholic, 6.1%; Reformists, 3.7%; Lutheran, 2.0%; Moslem, 1.3%; others, 4.9%.

HISTORY. In World War I, Rumania joined the Allies and won enough land at the peace conference to double its size. In World War II, Rumania joined the Axis and lost about half its earlier gains. Its present size is about that of Oregon. Politically, it is thoroughly dominated by the Russians.

Most of Rumania was the Roman province of Dacia from about A.D. 100 to 275. From the 6th to the 12th centuries, wave after wave of barbarian conquerors—Vlachs, Bulgars and others—passed over the area. Of the two regions which eventually became Rumania, Walachia was taken by the Turks in 1411, and Moldavia in the 16th century, but both retained semi-autonomy. After the Russo-Turkish War, they went under *de facto* Russian protection in 1774.

The Treaty of Paris following the Crimean War nominally united the two provinces in 1858, and Alexander Cuza was elected Prince of Moldavia and Walachia. In 1866 he was forced to abdicate and was succeeded by Prince Carol of Hohenzollern-Sigmaringen. The Treaty of Berlin recognized Rumania's complete independence in 1878, and in 1881 the principality was elevated to a kingdom. Rumania's spoils from the Second Balkan War in 1913 included the Black Sea province of Dobruja. The following year King Carol I was succeeded by his nephew, Ferdinand. The spoils from World War I, making Rumania the largest Balkan state, included Bessarabia, northern Transylvania and Buko-

vina. The Banat, a Hungarian area, was divided with Yugoslavia.

In 1926 Crown Prince Carol renounced his rights to the throne, and when King Ferdinand died on July 20, 1927, Carol's son, Michael (Mihai) became king under a regency. However, Carol returned from exile in 1930, was crowned King Carol II, and gradually became a powerful political force in the country. On Feb. 10, 1938, he abolished the democratic constitution of 1923. On June 21, 1940, the country was reorganized along fascist lines, and the fascist Iron Guard became the nucleus of the new totalitarian party. On June 27, the Soviet Union occupied Bessarabia and northern Bukovina. By the Axis-dictated Vienna Award of Aug. 30, 1940, two-fifths of Transylvania went to Hungary. On Sept. 4, the king dissolved Parliament and granted the new premier, Ion Antonescu, full power, after which he abdicated and went into exile with his mistress, Magda Lupescu, whom he married in 1947 when she became gravely ill. The first official act of his son, Michael I, was to confirm Antonescu in his status as head of the state and premier. Rumania subsequently signed the Axis Pact on Nov. 23, 1940, and the following June joined in Germany's attack on the U. S. S. R., reoccupying Bessarabia. Following the invasion of Rumania by the Red Army in Aug., 1944, King Michael led a coup d'état which ousted the Antonescu government. The new cabinet, headed by Constantin Sanatescu, included Socialist and Communist representatives. An armistice was signed Sept. 12 in Moscow.

Sanatescu was replaced on Dec. 6, 1944, by Nicolai Radescu, who in turn yielded on March 6, 1945 to Petru Groza. The latter formed a cabinet made up of members of the National Democratic Front (NDF), a political group formed by Communists, Social Democrats and subsidiary parties. Two opposition members were added to the cabinet Jan. 7, 1946, as one result of the Moscow Conference of Foreign Ministers, and on Feb. 5 the U. S. and Britain recognized Rumania conditional upon the holding of free elections. Elections, held Nov. 19, 1946, resulted in a victory for the Communist-dominated government bloc headed by Groza, who was reappointed premier with an all-NDF cabinet on Nov. 29. By 1947 Rumania was under complete Soviet political and economic domination.

SOVEREIGN. Michael I, born Oct. 25, 1921, son of King Carol II and Queen Helen of Greece, was proclaimed king under a regency on the death of his grandfather, Ferdinand, July 20, 1927. On his father's return to the throne June 8, 1930, his status reverted to that of crown prince, but he was proclaimed king again on Carol's abdication Sept. 6, 1940.

GOVERNMENT. Under the constitution of 1923 (suspended from 1938 to 1944), Rumania is a constitutional hereditary monarchy. Executive power is exercised by the cabinet, and legislative power is vested in a unicameral Parliament of 414 popularly elected deputies. (The Senate was abolished by royal decree July 14, 1946.) The king, however, possesses a veto power over both legislation and executive acts. Parties supporting the Government hold 379 seats, led by Social Democrats 78, Tatarascu Liberals 75, Plowmen's Front (Groza's party) 70 and Communists 68. The Opposition parties—National Peasants 32, National Liberals 3—charged that the Nov. 19 elections were fraudulent and refused to take their seats. The Government bloc is pledged to support the monarchy.

PEACE TREATY OF 1947. The Paris peace treaty ratified on Sept. 15, 1947, confirmed the *de facto* cession to the Soviet Union of Bessarabia and northern Bukovina, the return to Rumania from Hungary of northern Transylvania (thus annulling the Vienna Award of 1940) and the cession of southern Dobruja to Bulgaria. In addition, Rumania was required to pay reparations in kind in the amount of \$300,000,000 to the Soviet Union over a period of eight years. She also was to make compensation in lei to the amount of two-thirds of the original value of Allied property damaged or destroyed in Rumania.

The treaty limits the strength of the Rumanian armed forces as follows: army 125,000 men, navy 5,000 men and tonnage of 15,000, air force 8,000 men and 150 planes. The Soviet Union has the right to maintain line-of-communication troops in Rumania until a treaty with Austria becomes effective. The armed forces are being reorganized and re-equipped with Soviet assistance.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and compulsory. There are four universities—at Bucharest, Jassy, Cluj and Timisoara. Students in 1944-45 were 27,082. The state Church, governed by a Holy Synod, is Eastern Orthodox.

Rumania is predominantly agricultural, with about 80 percent of the population engaged on the soil. In wheat, rye and other grains, it is one of the richest countries of southeastern Europe. In 1946 the largest acreage was devoted to corn (production: 1,004,000 tons) and wheat (1,608,000 tons). Other crops are flax, hemp, fruit, vegetables, potatoes, sugar beets, sunflower seeds, tobacco and grapes. Stockraising is also important. In Sept. 1945, there were 3,400,000 cattle, 7,050,000 sheep and 1,500,000 hogs. Wool production in 1946 was 16,200 tons.

Agrarian reform measures effected in 1945 provide for the distribution of estates over fifty hectares (123.6 acres) in lots of

twelve and one half hectares to each peasant. Collectivization was not included in the program, but all cattle and implements became the outright property of the State, for lease to farmers.

The chief industries—flour milling, brewing and distilling—are directly connected with agriculture. However, the iron, steel, metal and machinery industries expanded considerably after the initiation of the rearmament program in 1935. In 1944 there were 2,250 industrial establishments with an output of 162,758,000 lei. The most important by value were food processing, textile, metal, chemical, wood and paper.

Exports in 1944 totaled 32,175,770,000 lei and imports 30,016,077,000 lei. Principal exports are ordinarily petroleum products, cereals and cereal products, wood and wood products. Leading imports are iron and manufactures, machinery and motors, vegetable fibers and products. Rumania's chief customers in 1939, by percentage, were: Germany, 32.3, Britain, 14.1, Italy, 12.1 and Czechoslovakia (Bohemia-Moravia), 10.9. Principal suppliers were Germany, 39.3, Czechoslovakia, 16.8, Italy, 8.8 and France, 8.2. Postwar trade has been hampered by heavy reparations.

The Danube, flowing along the southern border for more than 200 miles, is a highly important commercial artery. Transshipment between seagoing vessels and river barges is made at Galati and Braila. The Rumanian Sea and River Navigation Company, with one-fourth of its capital furnished by the U. S. S. R. and three-fourths by Rumania, monopolizes river and sea transport. The principle of freedom of navigation on the Danube for all nations was recognized in the 1947 peace treaty. The principal seaport is Constanta.

Railway and highway mileages in 1945 were 5,962 and 43,163 respectively. The Sovrom Civil Aviation Company, under Soviet management but financed equally by the U. S. S. R. and Rumania, has the monopoly for all civil air transport inside Rumania and to the Black Sea.

Expenditures for the year 1944-45 were estimated at 252,170,000,000 lei and revenue at 222,170,000,000 lei. Inflation continued to be serious in 1947. The national debt rose to 911,000,000,000 lei in Oct., 1945.

By far the most valuable of Rumania minerals is oil, produced chiefly in the Ploesti region about 35 miles north of Bucharest. In 1939 the output was 45,600,000 barrels, valued at \$45,464,450, about 2 percent of the total world production. For 1946, production was 29,353,000 barrels. Natural gas from Transylvania is the second most important mineral, coming to 1,774,000,000 cubic meters in 1945. Other important minerals are iron ore (1943: 300,100 tons); lignite (1944: 2,500,000 tons), copper ore, gold and silver. The

Russo-Rumanian Oil Company controls all former German oil firms and has a monopoly on new exploitation.

Fisheries on the lower Danube and wood production are also important.

TOPOGRAPHY AND CLIMATE. The Carpathian Mountains divide Rumania's upper half from north to south and connect near the center of the country with the Transylvanian Alps, running east and west. North and west of these ranges lies the Transylvanian plateau, and to the south and east are the plains of Moldavia and Walachia. In its last 190 miles, the Danube River flows through Rumania only.

The Moldavian-Walachian region has hot summers and extreme frosts and blizzards in winter. Variations are less extreme in Transylvania and the Banat. Bucharest's average summer temperature is 72°; winter 27°. In some winters the Danube is ice-bound for as long as three months. Rainfall, heaviest in summer, averages 15-20 inches annually.

El Salvador (Republic)

(República de El Salvador)

Area: 13,176 square miles.

Population (est. 1945): 1,934,925 (mestizo, 78%; Indian, 11%; white, 11%).

Density per square mile: 147.6.

President: Salvador Castañeda Castro.

Principal cities (est. 1944): San Salvador, 110,435 (capital); Santa Ana, 47,631 (coffee, sugar); Nueva San Salvador, 24,239 (trading center).

Monetary unit: Colón.

Language: Spanish.

Religion: Roman Catholic.

HISTORY AND GOVERNMENT. El Salvador is the smallest, most densely populated of Central American nations, and the only one without an Atlantic coast line.

Pedro de Alvarado, a lieutenant of Cortez, conquered El Salvador in 1525. The area was administered as part of Guatemala until the general Central American revolution against Spain in 1821. El Salvador struck out as an independent republic in 1839 after the dissolution of the Central American Union. Its story since then is one of revolution and strife.

In Jan., 1931, the first free election in 20 years brought in Arturo Araujo as president. He was overthrown before the year was over. General Maximiliano Hernández Martínez, his successor, remained in power until May, 1944, when a general strike forced his resignation. The next regime, also militarist-led, lasted only five months, and was succeeded March 1, 1945, by the present government.

The 1939 constitution provided for a president, popularly elected for four years and normally ineligible to succeed him-

self; also, a one-house legislature of 42 members. The military forces include an army limited to 3,000, a militia, a national guard and a small air force.

SOCIAL AND ECONOMIC CONDITIONS. With the second lowest illiteracy rate in Central America, El Salvador provides free and compulsory education; both public and private schools are state-controlled. Primary schools in 1944 numbered 1,376 (1945: 1,519) with 98,935 students; intermediate schools, about 50 with 4,207 students. The national university had 468 students in 1942.

The majority of the population is mixed white and Indian, but the governing class is composed chiefly of the white group of Spanish colonial origin.

El Salvador probably is the most intensely cultivated of Latin American nations, with more than 80 percent of its land planted. Coffee, which accounts for 75 percent of total exports (1946: 747,500 bags of 152 pounds each), is controlled in volume by a commission of government and planters. Corn, sugar, beans, rice, tobacco, cacao, indigo, millet and sisal fiber are other products. There is some cattle raising and a few local factories, including a monopoly on henequen bags for coffee.

Exports in 1946 totaled \$26,200,000, and imports \$21,000,000. Approximately 75 percent of the trade is with the U. S.

The two railways have approximately 375 miles of track. All-season highways total 1,378 miles, with an additional 2,300 miles of unimproved roads.

The 1946 budget estimated expenditures at 37,223,163 colones, and revenue at 37,317,547 colones. The foreign debt in 1946 was \$18,300,000. British investments on Dec. 31, 1946, were £1,515,490; U. S. direct investments in 1940, \$11,204,000.

Gold, silver, coal, copper, iron, zinc, mercury and sulfur are the nation's chief minerals. Gold production in 1943 (29,007 fine oz.) was valued at \$1,015,298, silver production (220,976 fine oz.) at \$95,507. Forest resources, much smaller than in other Central American states, include dyewood, mahogany, cedar and walnut. El Salvador is a leading source of balsam.

TOPOGRAPHY AND CLIMATE. Most of El Salvador is a fertile volcanic plateau about 2,000 feet high. It has several volcanoes, some still active, and many lovely crater lakes. One of these, Lake Ilopango, is a landing place for seaplanes. The mountain ranges along the borders of Guatemala and Honduras give the highlands an almost temperate climate, but the lowlands are often hot and sultry. Temperatures at San Salvador range from about 59° (average daily low) in January to 85° (average daily high) in December; these are the two coolest months. The rainy season lasts from May to October.

San Marino (Republic)

Area: 38 square miles.

Population (1939): 14,547 (mostly Italian).

Density per square mile: 382.8.

Executive: Two regents selected every six months by the Grand Council.

Principal town (est.): San Marino, 2,000 (capital).

Monetary unit: Lira.

Language: Italian.

Religion: Roman Catholic.

San Marino, the oldest and smallest republic in the world, is one-tenth the size of New York City. It has no standing army, no public debt, no wealth, no poverty, and is entirely surrounded by Italy, in the Apennines near Rimini. According to tradition, San Marino was founded about A.D. 350 and had good luck for centuries in staying out of the interminable wars and feuds on the Italian peninsula. The Pope recognized its independence in 1631.

San Marino hires its police and judges from Italy. It no longer confers titles for a consideration, but it does derive much revenue from the exporting of its postage stamps, which are changed often to keep philatelists buying. Other exports are barley, wine and cattle, as well as building stone from Mount Titano.

Executive power is exercised by regents, two of whom are appointed every six months from the popularly-elected Grand Council. There are several primary schools and a high school.

San Marino is linked with Rimini on the Adriatic by a 20-mile electric railway.

Siam (Kingdom)

(Muang Thai)

Area: 198,247 square miles.

Population (est. 1940): 15,717,000 (Thai, 90%; Chinese, 3.4%; Indian and Malayan, 3.4%; others, 3.2%).

Density per square mile: 78.6.

Ruler: King Phumiphon Aduldet (under regency).

Prime minister: Thawan Dhamrong Navaswat.

Principal cities (census 1937): Bangkok, 684,994 (chief port, commercial center); Khonkaen, 473,475 (trading center); Chiangmai, 443,476 (rice, teak); Chiangrai, 60,000 (northern trading center).

Monetary unit: Baht or tical.

Languages: Siamese, Chinese.

Religions (census 1937): Buddhist, 95%; Moslem, 4.3%; Christian and others, .7%.

*Including about 2,500,000 of Chinese descent born in Siam.

HISTORY. The Siamese first began moving down into their present homeland from the Asiatic continent in the 6th century A.D., and by the end of the 13th century

ruled most of the western portion. During the next 400 years the Siamese fought sporadically with the Cambodians to the east and the Burmese to the west. The British obtained recognition of paramount interest in Siam in 1824, and in 1896 an Anglo-French accord guaranteed Siamese independence. In 1909 Siam renounced claims to suzerainty over four Malayan states in return for almost complete cessation of British interference in Siamese internal affairs. Siam declared war on the Central Powers in 1917.

A coup on June 24, 1932, changed the absolute monarchy into a representative government with universal suffrage. Thus shorn of much power, King Prajadhipok abdicated in March, 1935, in favor of his nephew, Prince Ananda Mahidol. After five hours of token resistance on Dec. 8, 1941, Siam yielded to Japanese occupation and became one of the springboards in World War II for the Japanese campaign against Malaya. After the fall of its pro-Japanese puppet government in July, 1944, Siam pursued a policy of passive resistance against the Japanese, and on Aug. 16, 1945, after the Japanese surrender, Siam repudiated the declarations of war it had made against Britain and the U. S. in 1942.

By a treaty signed with Britain and India Jan. 1, 1946, Siam renounced all wartime acquisitions of Malayan territory and agreed that no canal linking the Gulf of Siam with the Indian Ocean would be cut across Siamese territory without British concurrence. A Franco-Siamese agreement of Nov. 17, 1946, provided for the return to Indo-China of a border area ceded to Siam by Vichy France in 1941.

King Phumiphon Aduldet, born Dec. 5, 1927, second son of Prince Mahidol of Songkhla, succeeded to the Siamese throne on June 9, 1946, when his brother, King Ananda Mahidol, died of a gunshot wound. A regency council was named to serve until the king reaches majority.

GOVERNMENT AND DEFENSE. Siam is a constitutional hereditary monarchy. Under a new constitution promulgated in 1946, legislative power is exercised by a popularly-elected bicameral Parliament whose upper and lower Houses comprise 80 and 178 members respectively. The king exercises executive power through a state council of 14 to 24 members headed by the prime minister.

The 1937 defense act made military service compulsory for a period of two years between the ages of 18 and 30. The army had 30,000 regulars in 1940, and there was a fair-sized air force. On Jan. 1, 1947, the navy had four coast defense ships, one destroyer, three submarines and other small craft.

SOCIAL AND ECONOMIC CONDITIONS. Buddhist monasteries throughout Siam

control most of the elementary education in rural districts. In 1939 there were 429 government schools with 61,297 pupils, and 11,072 local and municipal schools with 1,484,483 students. In 1937, there were two universities with 11,525 students. More than 77 percent of local schools and 23 percent of government schools were in monasteries.

Almost 90 percent of the Siamese work at agriculture. Rice (1939-40: 5,590,200 tons) is the principal crop, the staple food and the leading export. Next most important crop is rubber (1939: 41,266 tons). Other products include coconuts, corn, tobacco, cotton, sesame, sugar cane and soybeans. Livestock, poor in quality and quantity, is used mainly for hauling. Manufacturing is of little importance, except for native handicraft and food processing.

Exports, largely rice and rubber, were 437,517,716 baht in 1946 and included teak, other woods and some tin. Imports were 417,121,312 baht, including cotton textiles, foodstuffs, oil, machinery and electrical appliances. Domestic business is largely controlled by Chinese.

Siam has good water routes. Bangkok, the chief port, 25 miles up the Chaupaya River from the Gulf of Siam, handles about 80 percent of the foreign trade. Railways under government ownership total about 1,925 miles. In 1939 there were about 3,633 miles of highway. Air transport was well developed before World War II.

Government revenue in 1944 was \$17,118,181 and expenditure \$30,881,818. The national debt in 1940 was \$25,510,154.

Siam has small deposits of many important minerals, and some precious stones. Only tin, gold, tungsten and salt are in commercial production. Tin output in 1940 was 20,841 tons (10% of the world total), but production fell to about 3,000 tons in 1945.

The main forest product, taken from the northern hill country, is teak. Others are thingan wood, ironwood, ebony and rattan.

Fisheries, both ocean and river, ordinarily rank second to agriculture in product value. The average catch of 40,000 tons includes mainly mackerel, as well as anchovies, mollusks and shellfish.

TOPOGRAPHY AND CLIMATE. Siam, more than two-thirds the size of Texas, supports most of its population in the central alluvial plain which is drained by the Chaupaya River and tributaries. The climate is monsoonal, but the full force of the monsoons is broken by the western frontier hills. Rainfall decreases from south to north. Humidity is always high, but temperatures fall as low as 40° in the November-February cool season. Inland temperatures often rise to 100° during the hot season.

Spain (Nominal Monarchy)

(España)

Area: 194,945 square miles.

Population (est. 1946): 27,246,208 (Spanish, Basque, Catalan).

Density per square mile: 139.7.

Chief of State: Francisco Franco y Bahamonde.

Principal cities (est. 1945): Madrid, 1,175,215 (capital); Barcelona, 1,129,837 (chief port, textiles); Valencia, 475,148 (silk, oranges); Seville (Sevilla), 328,668 (wines, iron ore); Saragossa (Zaragoza), 248,338 (rail center); Málaga, 257,755 (seaport).

Monetary unit: Peseta.

Language: Spanish, Basque, Catalan.

Religion: Roman Catholic.

HISTORY. Spain, twice the size of Oregon and once one of the world's great powers, is somewhat of an outcast among nations today. The Franco dictatorship, helped substantially by Hitler and Mussolini, won control of the country in the civil war of 1936-39, and then, by staying nominally neutral in World War II, managed to survive the defeat of the Nazi-Fascist powers. The survival, however, was not without its cost. Spain today is the only non-enemy state of World War II specifically barred from international councils.

From 201 B.C. to A.D. 406, Spain was part of the Roman Empire. Then the Goths and the Vandals formed a powerful kingdom, which was partially conquered in the 8th century by the Moors from Africa. The last Moorish stronghold, the kingdom of Granada, fell to the forces of King Ferdinand and Queen Isabella, who were trying to unify Spain, in 1492. In the same year, the Spanish-financed explorer Christopher Columbus was discovering the new world for the Spanish crown.

Charles V (1516-55) became King of Spain and also Holy Roman Emperor. Under his son, Philip II, Spain reached the peak of its power, but the beginning of decline set in with Britain's defeat of the "Invincible" Armada in 1588.

The line of Spanish Hapsburgs ended in 1700, and the War of the Spanish Succession followed. By the Treaty of Utrecht (1713) Spain was forced to accept a Bourbon king, the Duke of Anjou, and lost Gibraltar and all holdings in the Netherlands and southern Italy. Then, while the Spaniards were resisting Napoleon's efforts to establish a Bonaparte line in Spain, most of their colonies in America revolted and became independent. The loss of Cuba, Puerto Rico and the Philippines in the Spanish-American War of 1898 left Spain with only a few scattered possessions in Africa. Neutrality was maintained during World War I.

From 1923 to 1930 Spain was a military dictatorship under General Miguel Primo de Rivera. A wave of republicanism in

1931 forced the abdication of King Alfonso XIII, and a new constitution was drawn declaring Spain to be a workers' republic. Several revolts, strikes and shifts of government kept Spain in political chaos, and on July 18, 1936, the army revolt led by General Francisco Franco burst into civil war. While Hitler and Mussolini helped Franco, Russia helped the Loyalist side. The last Loyalist forces surrendered on March 29, 1939. Spain became a dictatorship under Franco and signed the anti-Comintern pact in 1939.

While Franco shied away from the risk of becoming a belligerent in World War II, he was pro-Axis in sympathy, helped the Axis with material, intelligence and services to German U-boats, and even sent the Spanish Blue Division to fight Russia.

Meanwhile, monarchist sympathies remained strong both in and out of Franco's Falange party, and a Spanish Republican "Government-in-exile" was formed in 1945. Yet Franco's position remains strong.

GOVERNMENT. Franco is head of the state, national chief of the Falange party, prime minister and *caudillo* (leader) of the empire. Practically, the country is ruled by the cabinet (appointed by Franco), the National Council of the Falange party and, to a lesser extent, the Cortés (parliament). The principal function of the Cortés is the planning and formulation of laws without prejudice to Franco's veto power. Cabinet ministers, party officials, civil governors, university heads, and the presidents of learned bodies become members of the Cortés ex-officio. There is no provision for the introduction of legislation by any of the 238 members.

In a referendum held July 6, 1947, the Spanish people approved a Franco-drafted succession law declaring Spain a monarchy again. Franco, however, is to continue as chief of state and upon his death or incapacity the Government and a Council of the Realm constituted by the law are to nominate "that person of royal blood who is most qualified by right" as king, subject to the approval of the Cortés. The law reserves to Franco the right to nominate his own successor, subject also to the Cortés approval.

DEFENSE. Franco is commander in chief of the army, navy and air force, each administered by a cabinet minister responsible to him. Military service is compulsory for a period of two years. The standing army, estimated at 425,000 men, is divided into 16 divisions. Planes in service (about 950) are predominantly German and Italian. The air force in 1940 had 100,000 men and 50,000 reserves. The navy in 1947 had 6 cruisers, 16 destroyers, 8 submarines, 6 mine layers and 7 sloops with a tonnage of 83,000. Under construction were 20 destroyers, 4 sloops and 7 fleet mine sweep-

ers. The budgetary allotment for defense is 39 percent.

EDUCATION, RELIGION AND SOCIAL POLICIES. The illiteracy rate was 42.35 percent in 1943. Primary education is compulsory and free; religious instruction is permitted. In 1943 there were 44,292 public schools with 3,968,916 pupils, 118 secondary schools with 180,194 students, 53 normal schools with 15,526 students, and 12 universities with 37,672 students.

Roman Catholicism is the established religion. After the civil war of 1936-39, the church was restored to substantially its pre-republican position; confiscated property was returned, religious education was reintroduced, and divorce was suppressed.

The labor charter promulgated March 9, 1938, defined Spain as a totalitarian and syndicalist state. So-called vertical syndicates have supplanted all union organizations and all other organizations for the protection of the economic interests of productive groups. A branch of production extends "vertically" from the raw material stage through the industries and firms engaged in processing and marketing. Prices, wages and production, and the distribution of merchandise are controlled.

AGRICULTURE. Spain is predominantly agricultural. The principal land uses, apart from forest, pasture and forage crops, are the production of grain, potatoes, pulse, sugar beets, oranges, grapes and olives. Since the civil war Spain has not recovered balance in production and consumption of foodstuffs. Normally, Spain produces exportable quantities of oranges, lemons, almonds, filberts, raisins and other subtropical commodities. Wine production in 1946 was about 473,400,000 gallons.

PRINCIPAL CROPS

(thousands of metric tons)

	1931-35 average	1945	1946*
Wheat	4,364	1,680	3,623
Barley	2,394	711	1,913
Rye	551	229	476
Corn	709	472	†
Oats	670	224	619
Oranges	1,043	800*	475

*Estimated. †Not available.

Livestock, also important, included 4,100,000 cattle, 23,800,000 sheep, 6,100,000 goats and 5,150,000 hogs in 1944.

INDUSTRY. The textile industry, concentrated in Catalonia and normally employing over 300,000 workers, leads all others. Manufacture of paper is also important. In 1942, more than 500 companies made electrical goods valued at 500,000,000 pesetas, and the value of the output of the growing chemical industry was about the same. Pig iron production in 1945 was 515,875 tons. Steel output was at a monthly average of 51,800 tons in 1945.

TRADE. Exports in 1945 were valued at 82,900,000 gold pesetas; imports in 1944 at 826,600,000 gold pesetas. Leading exports are oranges, olive oil, hides and skins, cork and wine; leading imports are cotton, machinery, coffee, wood and vehicles.

COMMUNICATIONS. The merchant fleet, which suffered severely during the civil war and World War II, comprised 1,006 vessels of 1,037,938 gross tons in 1945. The national highway system is about 71,000 miles. In 1942 there were 7,970 miles of normal gauge and 2,835 miles of narrow gauge railways; 781 miles were electrified.

FINANCE. The budget for 1947 calculated government expenditure at 14,223,300,000 paper pesetas, and revenues at 12,963,500,000 paper pesetas. The air force, army, navy and government (police) departments received 40 percent of the total appropriations. The public debt in 1945 was 38,300,000,000 pesetas. Deficit financing, the enormous cost of reconstruction and World War II contributed to persistent inflationary tendencies in 1939-46. The note issue of the bank of Spain, amounting to 9,300,000,000 pesetas in July, 1940, was up to 19,700,000,000 pesetas by Aug., 1946.

MINERALS. Spain's mineral wealth, second to agriculture in the national economy, yields millions of tons of ore. In 1944 the mining industry employed 211,197 workers, and its output was valued at 3,969,822,716 pesetas. Following are some 1945 production figures: coal (13,161,460 tons), potash ore (792,231 tons), iron ore (1,280,000 tons), lead ore (29,850 tons), zinc ore (33,000 tons), mercury (40,090 flasks of 73 lb. each). Spain also produces important quantities of iron pyrites, phosphates, manganese, cobalt, sulfur, silver and gold.

FORESTS AND FISHERIES. Spanish forests yield lumber, pine resins, cork and esparto. The 1945 cork output was about 40,000 tons. In 1942 Spain produced 15,432 tons of crude resin, 11,023 tons of processed resin oil and 3,307 tons of turpentine oil.

More than 100,000 persons work in the fishing, canning and related industries. The 1943 catch, principally cod, tunny and sardines, was 445,000 tons valued at 1,055,712,000 pesetas.

TOPOGRAPHY. Spain, less than ten miles from Africa at the closest point, and separated from France by the Pyrenees, is generally a broad plateau sloping to south and east and crossed by a series of mountain ranges and river valleys. Most of the coast line is steep and rocky, with few indentations. The best harbors are on the Galician coast in the north; the broadest coastal plain is on the Gulf of Cadiz in the southwest. The Guadalquivir River in the south is navigable to Seville, but most of the others are mountain streams useful only for waterpower. Hydroelectric stations account for 75 percent of Spain's generating capacity.

CLIMATE. Most of Spain's weather is extreme. Madrid, for example, reaches a high of 110° and a low of 10°. In the southeast, the protection of the Sierra Nevadas makes the climate subtropical. The northeast, with climate much like that of the British Isles, is the only region with normal rainfall. In the east and southeast, irrigation is requisite to farming.

OUTLYING ISLANDS. Off Spain's east coast in the Mediterranean are the Balearic Islands, which total 1,936 square miles. The largest is Majorca (1,405 sq. mi.). Sixty miles west of the African coast in the Atlantic are the Canary Islands (2,894 sq. mi.).

SPANISH COLONIAL POSSESSIONS

Country	Area, sq. mi.	Population, est. July 31, 1944
Ceuta, Melilla, Alhucemas, Chaffarinas, and Peñon Velez	82	145,000
Spanish Morocco	7,589	992,000
Spanish Guinea	10,900	171,000
Western Sahara, including Infi and Spanish Sahara	116,200	72,000
Spanish Morocco: see Morocco		

Sweden (Kingdom)

(Sverige)

Area: 173,341 square miles.

Population (est. 1946): 6,673,956 (practically all Swedish).

Density per square mile: 38.5.

Sovereign: King Gustavus V.

Prime Minister: Tage Fritiof Erlander.

Principal cities (est. 1946): Stockholm, 671,525 (capital); Göteborg, 315,474 (chief port, shipbuilding); Malmö, 171,158 (seaport); Norrköping, 78,344 (textiles); Hälsingborg, 66,537 (Baltic seaport).

Monetary unit: Krona.

Language: Swedish.

Religions: Swedish Lutheran, 99%; others, 1%.

HISTORY. Sweden is one of the most progressive states in social welfare. It maintained a precarious neutrality during World Wars I and II and suffered from being virtually cut off from world markets by British and German blockades. On the other hand, nearly everything that Sweden had to sell after 1939 was eagerly taken by one side or the other, subject only to the difficulties of delivery. As a result, Sweden in 1947 was able to follow an independent course, leaning toward the West but still cooperating economically with the Soviet Union and its satellites.

Although the ancestors of today's Swedes lived in the area as long as 5,000 years ago, little is known of Sweden before the 10th century. Before 1100, King Olaf Skötkonung had united Sweden into

a strong nation and established Christianity. In 1397 Sweden was united with Norway and Denmark under the Union of Kalmar. After the murder of several prominent Swedes by Christian II of Denmark in 1520, Sweden revolted under the leadership of Gustavus Vasa. Gustavus, elected king in 1523, founded the modern Swedish state and was the first European monarch to break relations with the Pope.

By the Treaty of Westphalia (1648) which concluded the Thirty Years' War (during which Gustavus Adolphus scored a number of brilliant military successes), Sweden acquired important German areas, including large portions of Pomerania. In 1700, Poland, Denmark and Russia united against Sweden. When peace was finally concluded in 1721, Sweden gave up Livonia, Estonia, Ingria and parts of Finland. Sweden participated in the coalition against Napoleon (1805-07) but in 1809 Finland was lost to Russia. Following the ouster of King Gustavus IV in 1809, a constitutional law still in effect was adopted, after which Charles XIII, uncle of Gustavus IV, was elected king. Since Charles XIII was childless, one of Napoleon's marshals, Jean Bernadotte, was elected Crown Prince and took over effective control of the government, succeeding to the throne in 1818 as Charles XIV. By the Treaty of Kiel (1814), Sweden acquired Norway from Denmark in return for Pomerania. The union with Norway lasted until 1905, when it was peacefully dissolved.

Neutrality was maintained through both World Wars. In 1936 Per Albin Hansson formed a Social Democratic ministry which gave way on Dec. 12, 1939, to a national coalition cabinet under his leadership. On July 31, 1945, another wholly Social Democratic cabinet was formed by Hansson, who died in 1946 and was succeeded as prime minister by Tage Friitof Erlander.

SOVEREIGN. Gustavus V, born June 16, 1858, succeeded to the throne Dec. 8, 1907. He was married in 1881 to Princess Victoria (born 1862, died 1930), daughter of Friedrich, Grand Duke of Baden. Crown Prince Gustavus Adolphus, born Nov. 11, 1882, married (1) 1905, Princess Margaret Victoria (born 1882, died 1920); (2) 1923, Princess Louise Mountbatten (born 1889). To his first marriage was born Prince Gustavus Adolphus (born April 22, 1906, killed in air crash Jan. 26, 1947), who was married in 1932 to Sibylle, Princess of Saxe-Coburg-Gotha; their offspring include a son, Carl Gustavus, born April 30, 1946, and four daughters.

GOVERNMENT. Sweden is a limited monarchy. Executive and judicial authority is vested in the king alone, but his resolutions must be taken in the presence of the Council of State (cabinet), headed by the prime minister; the Council is appointed

by the king but is responsible collectively to the Riksdag (parliament).

The Riksdag has an upper chamber of 150 members elected indirectly by the provincial and municipal councils for eight years, one-eighth being renewed each year. The lower chamber of 230 members is directly elected by popular vote for four years. There is universal suffrage for men and women over 21. The king has the right to initiate legislation and has an absolute veto over all bills except those relating to taxation.

Party standing in the lower chamber (elections of Sept. 30, 1944) is as follows: Social Democrat 115, Conservative 39, Agrarian 35, Liberal 26, Communist 15.

DEFENSE. Military service is compulsory from the ages of 20 to 47; the initial training period is 15 months. The king is commander in chief of all the armed forces. The army, numbering 57,500 in 1947, is well-equipped with the latest type weapons, many of them developed in Sweden. The air force has 500 planes. The navy on Jan. 1, 1947, had 4 cruisers, 7 coast defense ships, 27 destroyers and large torpedo boats, 26 submarines, 2 minelayers and numerous smaller craft. Naval personnel numbers about 10,000 in addition to coast artillery, under naval jurisdiction.

EDUCATION. Public elementary education has been free and compulsory since 1842. In 1942 there were 529,750 pupils in the regular elementary schools and 53,868 students in secondary schools. The two universities—Uppsala and Lund—and three other schools of university grade had a total enrollment of 8,937 in 1944. The state also provides a large number of special vocational and continuation schools. The national church is the Swedish Lutheran Church, of which the King is supreme administrator.

SOCIAL WELFARE. The extremely well-developed cooperative movement is a powerful factor in the country's economic life. The cooperatives account for about 11 percent of the total retail trade and more than 20 percent of the grocery business. Social legislation, also well-advanced, includes unemployment relief, loans and grants for housing, medical care, care of the indigent and the aged, and a public works program to curtail unemployment. The federation of trade unions had 1,147,015 members in 1947—about one-sixth of the population.

AGRICULTURE. Grain, hay, potatoes and sugar beets are major products of the broad fertile plains of the south; cattle raising and dairy farming predominate in the north. The 1944 livestock census showed 603,857 horses, 2,858,949 cattle, 558,290 sheep and 1,053,865 hogs. Butter production in 1943 was 86,550 tons; cheese, 21,250 tons.

MAJOR AGRICULTURAL CROPS, 1945

Crop	Acreage	Production, short tons
Wheat	719,051	646,000
Grain (mixed)	685,401	508,900
Oats	1,341,078	830,500
Potatoes	358,918	1,825,000
Rye	415,578	304,000
Sugar beets	134,998	1,996,000

INDUSTRY. Industrial establishments in 1943 numbered 20,907 with 598,165 workers. The highly specialized machine industry produces separators, motors, electrical machines and apparatus, agricultural machinery, ball bearings, telephone equipment and harbor works. There are also large woolen, glass and porcelain industries. Shipyards build for both Swedish and foreign fleets; 70 vessels of 266,905 tons were under construction June 30, 1947. The timber and woodworking industries are extensive. The match industry is a single trust which covers the whole world and, with the help of British and American capital, monopolizes production in many countries.

TRADE. Sweden's export trade in 1946 was valued at \$643,700,000 (May, 1947: \$69,800,000); imports amounted to \$858,200,000 (May, 1947: \$128,000,000). Leading exports are minerals and metals, timber products, machinery, transportation equipment and instruments. Leading imports are minerals and metals and their products, foodstuffs, rubber, textiles and machinery. During World War II, almost half of Sweden's foreign trade was carried on with Germany, as against approximately 25 percent prior to 1940. The United Kingdom ordinarily takes most of Sweden's exports.

COMMUNICATIONS. In 1945 the merchant marine totaled 1,598,000 gross tons, largely efficient motor vessels. The highly developed railway network totaled 10,384 miles in 1945. In 1943 there were 55,550 miles of road, mostly improved. By means of ferry steamers, Swedish state railways are connected directly with both Germany and Denmark. Telephones in 1945 numbered 1,168,000 (177 per 1,000 persons), making the telephone system second only to the United States on a per capita basis. Airlines in 1945 had 16,500 route miles and flew a total of 2,926,797 miles.

FINANCE. The ordinary budget (1946-47) balanced at 3,347,000,000 kr., and the capital budget at 900,000,000 kr. The national debt on June 30, 1946, was 11,195,000,000 kr. The Riksbank (National Bank of Sweden) is dependent entirely to the state, is the sole bank of issue.

MINERALS. Sweden's high-grade iron ore deposits are among the world's richest. Those in central Sweden produce principally for domestic use, while the ones in Lapland to the north are worked largely for export, with much of the output being

shipped through the Norwegian port of Narvik. Production in 1944 was 8,000,000 short tons. Gold production in 1944 was 124,613 oz., and silver 1,048,508 oz. Other important minerals are copper, arsenic ore, manganese, lead, pyrite ore and zinc. Coal production (500,000 tons a year) is comparatively small; imports of nearly 8,000,000 tons a year are therefore necessary. Wood and peat are extensively used as fuel. Sweden's many waterfalls have a potential of 4,500,000 horsepower. The largest hydroelectric works are state-owned.

FORESTS AND FISHERIES. About 60 percent of Sweden is forested, mostly in pine, and there are vast forest products industries in the north. Sweden supplies a large percentage of the world's mechanical and chemical pulp.

The average annual catch of fish is about 140,000 tons, half of it in small Baltic herring. Cod, mackerel and sprat also are taken in the Baltic, and the inland lakes and rivers are well stocked with salmon, trout and perch. The fish catch in 1943 was valued at \$33,035,555.

TOPOGRAPHY. Sweden, with extreme length of about 990 miles and breadth of 250 miles, slopes eastward and southward from its peak elevation in the Kjölen mountains along the Norwegian border. In the north are mountains and many lakes. To the south and east are central lowlands, and south of them are fertile areas of forest, valley and plain. Along Sweden's rocky coast, chopped up extensively by bays and inlets, are many islands, the largest of which are Gotland (1,220 sq. mi.) and Oland (519 sq. mi.). The country is landlocked to the north. Eight percent of Sweden is covered by lakes.

CLIMATE. Sweden's climate is diversified. The warmest month is usually July, with a mean temperature of 62° in Stockholm. February is the coldest month, with a mean average below 32° for all Sweden (25.7° at Stockholm). Average annual rainfall in the north is 16.5 inches; in the south, 22.5 inches.

Switzerland (Republic)

(Schweiz-Suisse-Svizzera)

Area: 15,940 square miles.

Population (est. 1945): 4,343,000 (Swiss, 91.2%; German, 3.6%; Italian, 3.1%; French, .9%; others, 1.2%—figures by place of birth).

Density per square mile: 272.4.

President (1947): Dr. Philipp Etter (1948: Enrico Cello).

Principal cities (census 1941): Zürich, 336,395 (textiles, banking); Basel, 162,105 (rail center, Rhine port); Bern, 130,331 (capital); Geneva (Genève), 124,431 (intellectual center).

Monetary unit: Swiss franc.

Languages: German, 71.9%; French, 20.4%; Italian, 6.0%; Romansch, 1.1%; others, .6%.

Religions: Protestant, 57%; Roman Catholic, 41%; Jewish, .4%; others, 1.6%.

HISTORY. Switzerland, twice the size of New Jersey, is a tourist mecca, but its rugged scenery is more than a commercial asset. Europe's aggressors for centuries, right up through World War II, have usually left Switzerland in peace, largely because the cost of its conquest against the formidable natural barriers would be excessive.

Swiss history is principally the story of the drawing together of various fiefs of the Holy Roman Empire into a single union for common defense. The process began in 1291, with the cantons of Uri, Schwyz and Nidwalden as the nucleus. Over the next 300 years, ten new cantons entered the federation, which nominally remained part of the Holy Roman Empire until the Treaty of Westphalia gave it independence in 1648.

The French revolutionary army succeeded in occupying Switzerland in 1798 and organized it as the Helvetic Republic, but Napoleon restored the federation in 1803. The Congress of Vienna (1815) declared Switzerland an independent, neutral state in perpetuity, and fixed the nation's borders as they exist today. Out of the brief Swiss civil war of 1847 came the democratic constitution of 1848, which was influenced by the U. S. constitution.

Switzerland maintained strict neutrality in World Wars I and II, during which its diplomatic delegations represented the interests of many of the belligerents. Both sides bombed several Swiss cities by mistake in World War II. Switzerland was a center of both Axis and Allied espionage and counter-espionage activity during the war.

GOVERNMENT AND DEFENSE. Since the adoption in 1874 of their present constitution, the Swiss have had a federation of 22 sovereign cantons. Each canton has its own legislature, executive and judiciary departments, and the cantons have the right of veto over federal legislation through the referendum.

The Federal Assembly has two houses—a Council of States of 44 members, two from each canton, and a National Council of 194 members elected for four-year terms. The seven members of the cabinet (Federal Council) are elected for four years by the Federal Assembly, which also elects the Swiss president from among its own members for a period of one year. The federal government is supreme in matters of war, peace and treaties, and regulates the army, railroads, postal service, mints and national bank note issues.

In peacetime, the highest Swiss army officer is a colonel. In wartime a commander in chief is named with rank of general. Since the army is a national militia, it maintains no standing forces, but military service is compulsory from the

ages of 18 to 60, with an initial training period of about three months and an 11-day refresher course once a year. The force of men trained and physically fit is about 650,000. The air force has 5,000 personnel and 400 planes, maintained under the general staff.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is compulsory, free and locally controlled. In 1944 primary schools had 440,813 pupils, and secondary and lower middle schools had 74,447. There are seven universities, with total enrollment of 12,104 in 1945.

Religious freedom is guaranteed under the constitution. German, Italian and French were recognized as national languages in 1874, and Romansch, a dialect of the Alpine regions, was also made official in 1937.

With nearly a fourth of its land unproductive, and with half of it in pasture or forest area, Switzerland is dependent on imports for food supply. Wheat, potatoes, fruits, oats, barley, rye, sugar beets and grapes are grown, but stockraising and dairy farming account for three-fourths of the agricultural production. In 1945 there were 1,461,044 cattle, 192,450 sheep, 204,991 goats and 697,594 pigs. Production of cheese in 1944 was 47,000 short tons. Approximately 20 percent of the population is engaged in agriculture. Total value of agricultural production in 1945 was 2,054,000,000 fr.

Manufacturing is the principal economic activity, with more than 40 percent of the population being sustained by manufactures or mechanical pursuits. Industry is conducted largely in small plants using highly skilled workers. Almost all the raw materials are imported, and products consist almost exclusively of high grade, expensive commodities. In 1944 there were 9,480 industrial establishments. Leading manufactures include chemical products, machines, watches, textiles, aluminum, precision instruments, lumber, shoes and fine handmade embroidery. Chief agricultural industries are the manufacture of fine cheeses and condensed milk. With its many scenic attractions, Switzerland draws the heaviest and most profitable tourist trade in Europe.

Switzerland is dependent on foreign trade for its prosperity. Exports in 1946 totaled 2,675,500,000 fr. (1945: 1,473,700,000 fr.), and imports, 3,422,500,000 fr. (1945: 1,225,400,000 fr.). In 1945 the U. S. took 26 percent of the exports, France 11 percent and Sweden 7 percent. The U. S. supplied 11 percent of the imports, Italy 10 percent and Argentina 9 percent. Major exports are watches and machines, followed by dyes, aluminum, drugs, cotton goods, precision instruments, chemical products and cheese.

The Rhine, navigable from Basel to the North Sea, is the principal inland waterway. Railways built over rugged terrain, entailing construction of many bridges and tunnels, totaled 3,218 miles in 1946, mostly electrified. The railroads are of great strategic importance in communications between Germany and Italy. Road mileage totals about 10,200. State aerial service is gradually being developed.

Federal expenditures in 1946 were estimated at 691,000,000 fr., and revenue at 331,000,000 fr. The total national debt on Dec. 31, 1945, was 12,682,000,000 fr.

Swiss minerals are negligible except for aluminum (1944: 16,500 tons). Small amounts of iron, gold and coal also are found. Nearly 25 percent of the country is covered by forest.

TOPOGRAPHY AND CLIMATE. Most of Switzerland is an irregular, mountainous plateau bordered by the great bulk of the Alps on the south and by the Jura Mountains on the northwest. Its greatest length is 226 miles, greatest width, 137 miles. A fourth of its total area is covered by scenic mountains and glaciers. The highest peaks are Monte Rosa (15,217 ft.) and Matterhorn (14,780 ft.), both on the Italian border, and the Jungfrau (13,667 ft.), southeast of Interlaken. The sources of the Rhine, Rhône and Aar are in Switzerland. The country's largest lakes, Geneva, Constance (Boden See) and Maggiore, straddle the French, German-Austrian and Italian borders, respectively. Neuchâtel, 92 square miles, is the largest wholly Swiss lake.

The climate is temperate and varies greatly with altitude. The coldest month (January), for example, averages 31.8° at Basel, which is 909 feet in elevation, and 16.2° at Säntis, with altitude of 8,202 feet. July is the warmest month, with a mean temperature of 66.4° in Basel and 41° at Säntis.

Syria (Republic)

Area: 73,587 square miles.

Population (est. 1942): 2,800,000 (Arab, Armenian, Kurd, Turkish, French).

Density per square mile: 38.0.

President: Shukri el Quwatli.

Premier: Jamil Mardam Bey.

Principal cities (est. 1942): Damascus (Damas) 261,010 (capital); Aleppo (Alep), 257,337 (northern trading center); Homs, 64,940 (farming, silk); Hama, 60,225 (Bedouin trading center).

Monetary unit: Syrian-Lebanese pound.

Languages: Arabic, Aramaic, French.

Religions: Moslem (Sunni), 69.8%; Moslem (Alawite), 11.0%; Greek Orthodox, 4.6%; Armenian Orthodox, 3.5%; Moslem (Druze), 3.1%; others (Syrian Orthodox and Catholic, Greek and Armenian Catholic, Israelite, etc.), 8%.

HISTORY. Ancient Syria was conquered by Egypt about 1500 B.C., and after that by

Hebrews, Phoenicians, Assyrians, Chaldeans, Persians and Greeks. From 64 B.C. until the Arab conquest in A.D. 636, it was part of the Roman Empire except during brief periods. The Arabs made it a trade center for their whole empire, but it suffered severely from the Mongol invasion in 1260 and fell to the Ottoman Turks in 1516. Syria remained a Turkish province until World War I.

A secret Anglo-French pact of 1916 put Syria in the French zone of influence. The League of Nations gave France a mandate over Syria after World War I, but the French were forced to put down several nationalist uprisings. In 1930, France recognized Syria as an independent republic, but still subject to the mandate. After nationalist demonstrations in 1939, the French high commissioner suspended the Syrian constitution. In 1941 British and Free French forces invaded Syria to eliminate Vichy control. During the rest of World War II, Syria was an Allied base. Again in 1945, nationalist demonstrations broke into actual fighting, and British troops were rushed in to restore order. In 1946, however, British and French troops were withdrawn.

GOVERNMENT AND DEFENSE. Syria has a unicameral legislature popularly elected for four years by male citizens over 20. The premier and cabinet exercise executive power; the president, elected by the legislature, serves a five-year term. Latakia in the northwest and Jebel Druze in the south are part of Syria but have considerable autonomy. The Syrian army is being organized around a cadre of *troupes spéciales* transferred from French to Syrian jurisdiction in Aug., 1945.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is compulsory. In 1942 Syria had 921 schools with an enrollment of 142,015. There is a university at Damascus. Syria's mutually distrustful religions and sects are a serious weakness.

Agriculture and animal breeding are the main industries. Only half the land is arable, and only a third is actually cultivated. Most crops require irrigation. In 1945 Syria (including Lebanon) grew 443,493 metric tons of wheat, and 274,168 metric tons of barley; other leading crops include sorghum, olives, cotton, grapes, lentils and tobacco. Stockraising is important among nomads and semi-nomads.

Exports from Syria (and Lebanon) in 1945 totaled £SL43,842,000. Imports were £SL130,624,000. Textiles, fruit, vegetables, tobacco and wool were leading exports; cloth, oil and foodstuffs were imports.

Syria (and Lebanon) had in 1943 a total of approximately 7,000 miles of highway, and 1,100 miles of railway.

The 1946 Syrian budget balanced at £SL129,747,000, of which 25 percent was

for defense, 15 percent for public works, and 9 percent for education.

TOPOGRAPHY AND CLIMATE. Coastal Syria is a narrow plain. Back of that is a range of coastal mountains, and still farther inland is a steppe area. In the east is the Syrian Desert, and in the southeast next to Trans-Jordan is the Jebel Druze Range. The climate is subtropical, with rainfall averaging 50 inches on the coastal range but diminishing to less than four inches in parts of the desert. Summer temperatures at Aleppo range from about 75° at night to 100° during the day; winter temperatures, from freezing to 50°.

Trans-Jordan (Kingdom)

Area (est.): 35,000 square miles.

Population (est. 1946): 370,794 (mostly Arab)*.

Density per square mile (est): 10.6*.

Ruler: King Abdullah ibn Hussein.

Prime Minister: Ibrahim Hachem Pasha.

Principal city (1946): Amman, 45,000 (capital).

Monetary unit: Palestinian pound.

Language: Arabic.

Religions: Moslem (Sunni), except about 30,000 native Christians and 7,000 Circassians.

*Nomadic tribes of desert not included.

HISTORY. An ancient land, about the size of Indiana, Trans-Jordan was known in the time of Moses as Edom and Moab. It passed to the Amorites of Damascus and in A.D. 106 became part of the Roman province of Arabia. In 633-36 it was conquered by the Arabs, and a period of decline and depopulation ensued.

Conquered by the British in World War I, Trans-Jordan was separated from the Palestine mandate in 1920, and placed in 1921 under the rule of Abdullah ibn Hussein. In 1923 Britain recognized Trans-Jordan's independence, subject to the mandate. During World War II, Trans-Jordan cooperated completely with Britain. On March 22, 1946, Britain revoked the mandate and recognized the full and complete independence of Trans-Jordan. On June 1, 1946, Abdullah became king.

GOVERNMENT AND DEFENSE. Trans-Jordan is a constitutional monarchy. The king rules with the aid of a cabinet of department heads responsible to him, and an elected Legislative Council of 20.

Defense of the country is entrusted to the Arab Legion and the Trans-Jordan Frontier Force. An annex to the treaty of March 22, 1946, specified that Britain should provide officers, financial assistance, arms and equipment. Britain also reserved the right to maintain troops in Trans-Jordan.

SOCIAL AND ECONOMIC CONDITIONS. Life in Trans-Jordan is primitive; there

are estimated to be 50,000 nomads and 120,000 seminomads. At least 95 percent of the total area is deserted. Illiteracy is widespread; in 1944 the 175 schools had 16,066 pupils.

Most of the country is suitable only for pasturing sheep, goats and camels. Cultivated land is limited to a relatively small area west of the Hejaz Railway. In the drier cultivated areas of the plateau, the inhabitants retain tribal organization and still live in tents. Foreign trade is limited to the exchange of wheat, fresh fruit, wool and live animals for sugar, tea, and other necessities. Exports in 1942 totaled \$3,124,000, and imports \$8,874,000.

Despite the sparse settlement of the country, it has good roads (1946: 1,198 mi.) to Palestine, Syria and Iraq.

Governmental expenditures in 1945 were \$10,401,000, revenue \$11,518,000 and national debt \$1,251,000.

TOPOGRAPHY AND CLIMATE. Trans-Jordan is mainly a plateau with an average altitude of 3,000 feet, sloping gently eastward. The western edge is a steep slope overlooking the Rift Valley (Jordan River, Dead Sea and Wadi el Araba) 3,000-4,000 feet below. In the south are mountains over 5,000 feet high and a sandstone area cut by deep canyons. The subtropical steppe and desert have wet cold winters and dry hot summers. Rainfall near the escarpment decreases from about 26 inches in the north to 10 inches in the south. Average maximum temperature in August is 92°; average minimum temperature in January is 39°.

Trieste

(Free Territory under U. N. protection)

Focal point of Big Power dispute during the 1946 treaty negotiations, the tiny Free Territory of Trieste on the northeastern Adriatic took existence on Sept. 15, 1947. Soviet Russia had backed Yugoslav claims for the whole Istrian peninsula, including the port of Trieste, an ideal sea outlet for Soviet-dominated Danubia. The U. S. and Britain opposed these claims. A French compromise was adopted which gave Yugoslavia the predominantly Italian cities of western Istria, including the Pola naval base; from the other predominantly Italian parts, consisting of the city and surrounding territory of Trieste, the Free Territory was formed under United Nations protection. Its area is 503 square miles.

The governor of the Free Territory, who cannot be an Italian or Yugoslav national, is appointed by the United Nations Security Council for a term of five years, after consultation with the Italian and Yugoslav governments. Legislative authority is vested in a popularly elected unicameral Assembly.

Turkey (Republic)

(Türkiye Cümhuriyeti)

Area: 296,185 square miles.

Population (census 1945): 18,860,222 (Turkish, 94%; Greek, 2.2%; Bulgarian, 1.4%; Yugoslavian, .9%; others, 1.5%)*.

Density per square mile: 63.7.

President: İsmet İnönü.

Prime Minister: Hasan Saka (Interim).

Principal cities (census 1945): Istanbul (formerly Constantinople), 844,090 (chief port, commercial center); Smyrna (İzmir), 200,088 (seaport); Ankara (Angora), 227,505 (capital); Adana (Seyhan), 100,367 (agricultural center); Brusa, 86,021 (silk, carpets); Eskişehir, 80,096 (trading center).

Monetary unit: Turkish pound.

Languages: Turkish, Greek, Bulgarian.

Religions: Mohammedan, 98.6%; others, 1.4%.

*1935, by place of birth.

HISTORY. Successor to the once great Ottoman Empire, Turkey in 1947 felt more than ever the pressure of the centuries-long Russian quest for control of the strategic Dardanelles and the historic waterway lying entirely within Turkey and separating Europe from Asia. A nation of striking contrasts ranging from the multi-racial metropolis of Istanbul to the dreary ranges of Anatolia, this strategic land has made marked advances toward modernization and Westernization during the past 25 years under the impetus given by the national hero, the late Kemal Atatürk.

The Ottoman Turks first appeared in the early 13th century A.D. Under the leadership of their aggressive sultans, they gradually spread their hegemony over most of the Near East and the Balkans, capturing Constantinople in 1453 and storming the gates of Vienna in the 17th century. At the height of its power, the Empire stretched from the Persian Gulf to the frontiers of Poland and from the shores of the Caspian Sea to Oran in Algeria.

The defeat of the Turkish navy at Lepanto in 1571 by the Holy League and of Turkish forces besieging Vienna in 1683 portended the decline of Ottoman power, reducing Turkey to the status of a pawn in Europe's political maneuvers. Russia moved into the Balkans in the 18th century and made herself official protector of the Balkan Christians. Fear of a Russian drive on Constantinople prompted England and France to declare war on Russia, and the Crimean War (1853-56) followed. As a result of the Russo-Turkish war (1877-78), Bulgaria became practically independent, and Rumania and Serbia threw off their nominal allegiance to the sultan. Further defeats were suffered by Turkey in a war with Italy (1911-12) and in the Balkan Wars (1912-13). Meanwhile, a revolt led by the Young Turks, an organization of youthful liberals, had forced the abdi-

cation of Sultan Abdul-Hamid in 1909 and established a constitutional regime.

On Aug. 2, 1914, at the outbreak of World War I, a secret alliance was signed between Germany and Turkey, whose army was advised by a German military mission, and in September the Allies declared war on Turkey. Turkish forces successfully defended the strategic Dardanelles, but British forces seized Palestine, Mesopotamia and Syria; and the Hejaz revolted. By 1918 Allied forces held the territory along the Dardanelles and the Bosphorus, and later Greek forces occupied Smyrna and vicinity.

In 1919 the new Nationalist party, headed by Mustafa Kemal, was organized to resist the Allied occupation, and in 1920 a National Assembly elected Mustafa Kemal president of both the assembly and the government. Under his leadership, the Nationalist government was recognized by foreign powers, the Greeks were driven out of Smyrna, and other Allied forces were withdrawn. The present Turkish boundaries (with the exception of Alexandretta, ceded to Turkey by France in 1939) were fixed by the Treaty of Lausanne (1923) and later negotiations. The caliphate and sultanate were separated and the sultanate abolished on Oct. 1, 1922. On Oct. 29, 1923, Turkey formally became a republic with Mustafa Kemal, who took the name of Kemal Atatürk, as its first president. He carried out an extensive program of reform, modernization and industrialization.

The Montreux Convention (1936) abrogated a number of provisions of the Treaty of Lausanne relating to the Straits and authorized Turkey to fortify the former demilitarized zone. Turkey was given sole responsibility for the defense of the area. On Aug. 7, 1946, Soviet Russia proposed in a note to Turkey that defense of the Straits be made a joint Turkish-Soviet responsibility under a revision of the Montreux convention, but the proposal was opposed by both Britain and the U. S., as well as by Turkey.

General İsmet İnönü was elected to succeed Kemal Atatürk on the latter's death in 1938 and was re-elected in 1939, 1943 and on Aug. 5, 1946. On Oct. 19, 1939, a mutual assistance pact was concluded with Britain and France. Turkey followed a neutral course during most of World War II, but on Aug. 2, 1944, she broke off relations with Germany, and on Jan. 3, 1945, with Japan. On Feb. 23, 1945, she declared war on Germany and Japan, but took no active part in the conflict. Since the abrogation of the Soviet-Turkish non-aggression pact in March, 1945, Turkey has been subjected to increasing Soviet pressure for a share in the control of the Dardanelles. To assist Turkey in effecting modernization necessary for the preservation of its national integrity, the U. S. in

1947 agreed to advance \$100,000,000, all of which was to be used for the armed forces or to a lesser extent for economic projects directly related to Turkish defense.

GOVERNMENT. The constitution, as amended in 1937, defines the Turkish state as "republican, nationalist, populist, étatist, secular, and revolutionary." The president is chosen from the deputies of the National Assembly; his term of office is identical with the life of each Assembly. The 465 members of the Assembly are elected by universal suffrage for a term of four years. According to the constitution, the Assembly exercises the executive power through the president and Council of Ministers (cabinet) appointed by him. It may at any time control the actions of the government and at any time dismiss it.

The principal political party is the nationalistic Republican People's party, but other parties were allowed to participate in assembly elections held July 21, 1946, in which the Democrat party obtained 60 seats and Independents 4 out of 465. Centralization is the basis of the governmental system. The pre-republic judicial system, based on Sunni Moslem law, was replaced in 1926 by a new system based on the Swiss civil code.

DEFENSE. Military service is compulsory from 20 to 45; the initial training period is three years. The strength of the army, mobilized since 1939, is from 500,000 to 650,000. The army's prewar equipment was largely obsolescent, and while large purchases of modern matériel were made during World War II, equipment is still inadequate. The air force, under the direct control of the Turkish General Staff, had a strength of about 1,050 planes in 1947. The navy has 1 battle cruiser, 2 outdated cruisers, 8 destroyers and large torpedo boats, and 10 submarines adding up to a tonnage of 39,688. The budgetary allotment for defense is 50 percent.

EDUCATION. Elementary education is nominally obligatory from 7 to 16. According to the census of 1935 only 2,517,878 of the population were literate in the Latin alphabet, which replaced the Arabic script in 1928. In 1943 there were 11,888 schools with 767,215 male and 332,011 female students. There were 20 institutions of higher learning with 11,779 male and 3,011 female students in 1942.

AGRICULTURE AND INDUSTRY. Agriculture is the principal economic activity, engaging about 65 percent of the population. Only about 20 percent of the land is under cultivation, but the government has made great efforts to modernize and improve farming. The most important cash crop is tobacco (1945: 66,000 tons) with the best quality coming from the Pontic coast near Samsun and also from Bafra, Sinop and Trebizond. Cereals provide about 75 per-

cent of the country's needs. Cotton is grown largely in the south of Asia Minor while figs come exclusively from the Smyrna region. Turkey is a leading exporter of olive oil; the Brusa region and the Ionian coast are the principal areas of cultivation. Opium poppies are grown in the Smyrna, Malatia and Tokat regions.

MAJOR AGRICULTURAL CROPS, 1944

Crop	Acres	Production, tons
Barley	4,088,164	1,546,581
Corn	1,427,448	560,295
Cotton	643,892	64,943
Oats	647,360	204,670
Wheat	9,239,657	3,525,592

Turkey is rich in livestock. The most important animal is the goat; there were 8,494,937 ordinary goats in 1944 besides the valuable Angora (3,320,685) which thrives on the uplands of the plateau. There were also 649,712 buffaloes, 7,170,930 cattle, 716,327 horses, 1,217,997 mules and asses, and 16,124,884 sheep.

In 1941 Turkey had 1,052 industrial establishments. Staple industries have been established in iron, steel, textiles, paper, glass, sugar and cement.

TRADE. Imports in 1946 were valued at \$121,400,000 (April, 1947: \$15,800,000) and exports at \$218,200,000 (April, 1947: \$23,800,000). Leading imports are mineral oils, machinery, iron and steel products, paper, chemicals, textiles and foodstuffs. The chief exports are tobacco, raisin grapes, hazel nuts, cotton, figs, grain and mohair. Prior to World War II, Germany was Turkey's principal customer and supplier.

COMMUNICATIONS AND FINANCE. In 1942 Turkey had a merchant fleet of 168 vessels with a gross tonnage of 187,556. Coastwise trade is restricted to Turkish vessels. The republic has pushed the development of a good railway system in Asiatic Turkey. The total length of railways (1944) was 4,551 miles, of which 4,304 were owned by the state. Highway mileage (1942) totaled 25,393.

Governmental expenditure and revenue estimates for the year 1947 balanced at 1,021,000,000 Turkish pounds. The total public debt (Dec., 1945) was 1,489,000,000. From 1939 until Jan. 31, 1947, the U. S. authorized loans to Turkey in the amount of \$130,979,811, of which \$101,051,769 had been spent by Jan. 31, 1947.

MINERALS AND FORESTS. Turkey's rich mineral resources are still comparatively unexploited. Deposits of copper in the large field at Arghana, near the Iraq-Syrian frontier, have been estimated at 1,600,000 tons (1945 output: 7,371 tons). Turkey is also relatively rich in coal, with large deposits in the Ereğli region on the Pontic coast some 150 miles from Istanbul (1945 output: 4,099,454 tons). A virtual world

monopoly is enjoyed in meerschaum, found in the Eskisehir district. Other important minerals include chrome, manganese ore, emery and antimony.

Nearly nine percent of the total area of Turkey in Asia is forest land, covering 25,419 square miles. A large proportion of Eastern Thrace is also under forest, covering 1,648 square miles. Pines are 37 percent of the total and oaks 14 percent.

TOPOGRAPHY AND CLIMATE. Turkey is divided into two natural areas by the historic waterway formed by the Dardanelles, the Sea of Marmara and the Bosphorus. Turkey in Europe comprises an area about equal to the state of Massachusetts. It is hilly country drained by the Maritsa River and its tributaries. Almost all the population is concentrated in and near the two important towns, Istanbul (Constantinople) and Edirne (Adrianople). Turkey in Asia, or Anatolia, about the size of Texas, is roughly a rectangle in shape with its short sides on the east and west.

Its center is a treeless plateau, bordered on all sides by a rim of mountains which on the seacoasts drops steeply to a wooded plain some 75 miles wide. On the land frontiers, the belt of forest clothes the foothills of the Taurus Mountains and the Armenian highlands.

Turkey has a great variety of climate. Along the coast from Antioch to the Dardanelles the climate is Mediterranean, with rainy winters and dry summers. Thence to the Bosphorus it is transitional to the type of climate with heavy year-round rainfall. Semitropical fruits and tea may be grown in the region beyond Trebizond on the Black Sea. The western plateau has a harsh steppe climate, with cold winters, hot summers and scanty rainfall, while the eastern plateau exhibits a transition from steppe to alpine climate. Istanbul has a mean annual temperature of 57° (maximum 99°, minimum 17°) and average yearly rainfall of 28.3 inches. Rain falls approximately one day out of three.

Union of Soviet Socialist Republics

Area (est.): 8,412,345 square miles* (8,173,666 in 1938).

Population (est.): 195,152,000* (170,467,186 by 1939 census) (Great Russian, 58.4%; Ukrainian, 16.6%; Byelorussian, 3.1%; Uzbek, 2.9%; Tartars, 2.5%; Armenian, Azerbaijani, Georgian, each 1.3%; more than 100 others, 12.6%).

Density per square mile: 23.2*.

Chairman of Presidium of Supreme Council: Nikolai M. Shvernik.

Premier: Joseph Vissarionovich Stalin.

Principal cities (census 1939): Moscow, 4,137,018 (capital); Leningrad, 3,191,304 (industrial center, shipbuilding); Kiev, 846,293 (industrial center, Ukraine); Kharkov, 833,432 (iron and steel, coal); Baku, 809,347 (oil center, Azerbaijan); Gorki, 644,116 (iron and steel); Odessa (1937), 604,223 (chief Black Sea port); Tashkent, 585,005 (textiles, tobacco, Uzbek S. S. R.); Tiflis (Tbilisi), 519,175 (capital of Georgian S. S. R.); Rostov on Don, 510,253 (grain, shipbuilding).

Monetary unit: Rouble.

Languages: See Population.

Religions: Russian Orthodox (predominant), Mohammedan, Roman Catholic, Jewish, Lutheran.

*Including acquisitions since 1939.

HISTORY. With an area almost three times that of the U. S. and a population almost one and one-half times larger, the vast Soviet Union has risen in 30 years from a war-stricken agricultural state torn by internecine strife to a great industrial-agricultural federation holding a place second only to that of the U. S. in world power. A police state with a government-owned economy directed by a small Communist minority, the Union successfully absorbed mighty German attacks in 1941-42 and rebounded to drive back into Germany itself by V-E Day. In 1947 there

was gradually emerging a sharp division between the Soviet hegemony in eastern and part of central Europe, and the western European nations who had the support of Britain and the U. S.

The recorded history of Russia begins with the perhaps legendary figure of the Viking Rurik, who according to tradition came to Russia in A.D. 862 and founded the first Russian dynasty in Novgorod. The various tribes were united by the spread of Christianity in the 10th and 11th centuries; Vladimir "the Saint" was converted in 988. During the 11th century the grand dukes of Kiev held such centralizing power as existed. In 1240 Kiev was destroyed by the Mongols, and the Russian territory was split into numerous smaller dukedoms, out of which three large centers emerged—Galicia, Moscow and Novgorod. The early dukes of Moscow extended their dominions through their office of tribute collector for the Mongols.

In the late 15th century, Ivan III, the reigning duke, acquired the rival kingdoms of Novgorod and Tver and threw off the Mongol yoke. Ivan IV, the Terrible (1533-84), first Muscovite duke to assume the title of Tsar, is considered to have founded the Russian State. He crushed the power of rival princes and boyars (great landowners), but Russia remained largely medieval until the reign of Peter the Great (1682-1725), grandson of the first Romanov tsar, Michael (1613-45). Peter effected extensive reforms aimed at Westernization, and through his defeat of Charles XII of Sweden at the Battle of Poltava (1709), he extended Russia's boundaries to the west. Catherine the Great (1762-96) continued Peter's Westernization program and

also expanded Russian territory, acquiring the Crimea and part of Poland. During the reign of Alexander I (1801-25), Napoleon's attempt to subdue Russia was defeated (1812-13), and new territory was gained, including Finland (1809) and Bessarabia (1812). Alexander was the originator of the Holy Alliance which crushed for a time Europe's rising liberal movement. Between the Napoleonic Wars and World War I, a few reforms were introduced, but the autocratic power of the tsars remained unchanged.

During the reign of Alexander II (1855-81), Russia's borders were pushed to the Pacific and into central Asia. Serfdom was abolished in 1861, but heavy restrictions were imposed on the emancipated class. Revolutionary strikes following Russia's defeat in the war with Japan forced Nicholas II (1894-1917) to grant a representative national body (Duma), elected by narrowly limited suffrage. It met for the first time in 1906. Nicholas continued in his reactionary course, however, and the overwhelmingly liberal Duma had little or no influence in the government.

World War I demonstrated the corruption and inefficiency of the Tsarist regime, although the call of patriotism held the poorly equipped army together for a time. Disorders broke out in Petrograd (now Leningrad) in March, 1917, and, following the winning over of the Petrograd garrison, the revolution was in full swing. Nicholas was forced to abdicate under pressure from the Duma and was later killed by the revolutionists. A provisional government was formed, composed of both conservative and radical elements. This government, under the successive premier-ships of Prince Lvov and Alexander Kerensky, a Menshevik or moderate socialist, soon lost ground to the radical or Bolshevik wing of the Socialist Democratic Labor Party. Finally, on Nov. 7, 1917, came the Second Revolution, engineered by Nikolai Lenin and Leon Trotsky and their small but well-disciplined Bolshevik following in the Petrograd Soviet. The government was turned over the next day to the Congress of Soviets (councils of soldiers, peasants and workers), which vested the government in a Council of People's Commissars with Lenin as premier and Trotsky as foreign minister. The humiliating Treaty of Brest-Litovsk (March 3, 1918) concluded the war with Germany, but civil war and intervention by foreign powers prevented the new Communist government from gaining control of all Russia until 1920. A brief war with Poland in 1920 resulted in Russian defeat and withdrawal.

On July 6, 1923, the vast territory under Soviet rule—previously an inchoate mass whose constituent parts were changing constantly—became the Union of Soviet Socialist Republics, formed by the union

of the Russian S.F.S.R. and the Ukrainian, Byelorussian and Transcaucasian S.S.R.'s.

The sudden death of Lenin (Jan. 21, 1924) precipitated an intraparty struggle between the group led by Joseph Stalin, general secretary of the party, and the opposition, led by Trotsky, which favored not only swifter socialization at home but fomentation of revolution abroad. In 1927, Trotsky and other opposition leaders were expelled from the party and exiled. The first Five-Year Plan (1928-32) called for gradual, progressive increase in industrial and agricultural production. Its collectivization program was opposed by the Kulaks, or wealthier peasants, who were vigorously suppressed. Purges carried out in 1936-38 removed a number of prominent leaders of the Revolution as well as high-ranking army officers.

Soviet foreign policy—first featured by friendship with Germany and antagonism toward England and France and then, after Hitler's rise to power in 1933, by participation in the League of Nations and an anti-Fascist program—took another abrupt turn on Aug. 24, 1939, with the signing of a Soviet-German nonaggression pact. Territory seized from Poland (Sept., 1939) became part of the Ukrainian and Byelorussian S.S.R.'s; that secured from Finland at the conclusion of the Finnish war of 1939-40, part of the Karelian S.S.R. set up March 31, 1940; that secured from Rumania (Bessarabia and northern Bukovina), part of the Moldavian S.S.R. set up Aug. 2, 1940; and finally the formerly independent states of Estonia, Latvia and Lithuania, occupied in June, 1940, were absorbed into the U.S.S.R. as the 14th, 15th and 16th Soviet Republics.

Immediately following the German attack (June 22, 1941), all necessary powers for the defense of the state were vested in the State Defense Council headed by Stalin, who had taken over the post of premier on May 6. The Germans quickly seized about 500,000 square miles of Soviet territory, occupying about 10 percent of the Union itself, but the Soviet forces resisted stubbornly, aided by increasing amounts of matériel from the U. S. and Britain. The great Soviet counteroffensive in the Stalingrad area (Nov., 1942-Feb., 1943) marked the turning point. Soviet troops gradually pushed the Nazis back and unleashed their final great offensive on Jan. 12, 1945. The nonaggression pact with Japan (1941) was denounced in April, 1945, and, following the declaration of war on Japan (Aug. 8, 1945), Soviet Far Eastern forces quickly occupied Manchuria, Karafuto and the Kuriles.

After the end of the war, the fourth Five-Year Plan was launched in Sept., 1945, with emphasis on the expansion of heavy industry.

Rulers of Russia Since 1462

	Born	Reigned
Ivan III the Great ¹	1440	1462-1505
Basil III ¹	1479	1505-1533
Ivan IV the Terrible ²	1530	1533-1584

PROVISIONAL GOVERNMENT

Prince Georgi Lvov (premier)	1861	1917-1917
Alexander Kerensky (premier)	1881	1917-1917

U. S. S. R.

Nikolai Lenin (premier)	1870	1917-1924
Joseph Stalin (premier) ⁷	1879	1924-

¹Grand Dukes of Muscovy.

²First tsar of Russia; had himself crowned as such in 1547.

³Also known as Pseudo-Demetrius. His origin is obscure. He claimed to be the youngest son of Ivan IV, Demetrius, who had been murdered in 1591. Demetrius I conquered Moscow in 1605 but was killed in 1606. From 1607-12, two other men, posing as Demetrius, attempted to capture Moscow but failed.

⁴During this period, the throne remained empty. ⁵First of the Romanov line, which lasted until the Russian Revolution. Michael was the grand-nephew of Ivan IV.

⁶Ruled jointly until 1689, at which time Ivan V was deposed.

⁷As General Secretary of the Communist Party, Stalin was actual head of the Soviet Union from 1924-41. In 1941, he became premier.

GOVERNMENT. Under the constitution of 1936, the Soviet Union is "a Socialist State of Workers and Peasants" whose highest organ is the Supreme Council of the Union, which exercises legislative authority. It consists of two co-equal Houses—the Council of Nationalities, in which each constituent republic has 25 representatives, each autonomous republic 11, each autonomous oblast five, and each national

okrug one (total 713); and the Council of the Union, elected on a nationwide basis with one representative for each 300,000 of population (total membership 647). All representatives are elected for four-year terms; the last election was held on Feb. 10, 1946. Elections amount to a blanket endorsement (or rejection) of a single list of candidates already nominated by the Communist Party, youth organizations, collective farms and trade unions. The only election in the Western sense of the word takes place in the selection of the nominees by these groups. All citizens over the age of 18 are enfranchised.

The Presidium of the Supreme Council acts as a directive body between the sessions of the Supreme Council. It has a chairman (sometimes referred to as the Soviet president), 16 vice chairmen (one for each constituent republic), a secretary and 24 members, all elected by the Supreme Council.

The highest executive and administrative power is exercised by the Council of Ministers (formerly People's Commissars) appointed by the Supreme Council and headed by a chairman (premier) and eight vice chairmen. It issues decrees and executive orders on the basis of laws in operation and supervises their execution. The administrative machinery is necessarily vast and complicated, since it is responsible not only for the ordinary administrative functions of government, but also for the operation of state-owned enterprises.

The 16 constituent republics of the Union are as follows: the Russian Soviet Federated Socialist Republic (capital: Moscow) covering about 80 percent of the total area; the Ukrainian S.S.R. (Kiev); Byelorussian S.S.R. (Minsk); Armenian S.S.R. (Erivan); Azerbaijan S.S.R. (Baku); Georgian S.S.R. (Tiflis); Turkmen S.S.R. (Ashkhabad); Uzbek S.S.R. (Tashkent); Tadzhik S.S.R. (Stalinabad); Kazakh S.S.R. (Alma Ata); Kirghiz S.S.R. (Frunze); Karelo-Finnish S.S.R. (Petrozavodsk); Moldavian S.S.R. (Kishinev); Lithuanian S.S.R. (Vilnius); Estonian S.S.R. (Tallinn) and Latvian S.S.R. (Riga).

Postwar territorial acquisitions include the Carpatho-Ukraine (12,617 sq. mi.) obtained from Czechoslovakia June 29, 1945, incorporated into the Ukrainian S.S.R. as Zakarpatskaya Oblast; the Republic of Tannu Tuva in central Asia (64,000 sq. mi.) incorporated early in 1945 into the R.S.F.S.R. as the Tuvian Autonomous Oblast; Karafuto or southern Sakhalin (13,935 sq. mi.) and the Kurile Islands (3,944 sq. mi.), occupied by Soviet troops in Aug., 1945, and incorporated into the Khabarovsk Krai of the R.S.F.S.R.; the northern part of eastern Prussia (about 7,000 sq. mi.), placed under *de facto* Soviet administration at the Potsdam Con-

ference and incorporated into R.S.F.S.R. as Kaliningrad (formerly Königsberg) Okrug; the Petsamo district of Finland, obtained *de jure* under the 1947 treaty and incorporated into the Murmansk Oblast of the R.S.F.S.R.; and Poland east of the Curzon Line (77,703 sq. mi.), under terms of Soviet-Polish treaty of Aug. 16, 1945, incorporated into the Ukrainian and Byelorussian S.S.R.'s.

COMMUNIST PARTY. The only political party permitted to exist in the Soviet Union is the All-Union Communist Party, which now has more than 6,000,000 members. Its organization parallels the entire governmental and economic structure of the country and guides all important action through instructions from the central organs to Party members who occupy most of the important political and economic positions. Its highest organ is the All-Union Party Congress, which meets irregularly. The Congress elects a Central Committee (71 members, 68 alternates), which in turn elects (1) an executive body (Politburo) with ten members and four alternates, (2) an organizational bureau (Orgburo), which manages the Party, (3) a secretariat headed by a general secretary (Stalin), and (4) a Committee of Party Control with 31 members.

The members of the all-powerful Politburo are Stalin, V.M. Molotov, A.A. Andreyev, K.E. Voroshilov, A.A. Zhdanov, L.M. Kaganovich, A.I. Mikoyan, N.S. Khrushchev, L.P. Beria, G.M. Malenkov; (alternates), N.A. Voznesensky, N.A. Bulganin, A.N. Kosygin and N.M. Shvernik.

DEFENSE. The land, air and sea forces of the Union are under the unified control of the Armed Forces Ministry headed by General Nikolai Bulganin. The army, the navy, the air force and the supply services have separate staffs and commanders operating under his general supervision. Military service is compulsory; the initial training period varies from 2 to 5 years. The armed forces, which were estimated to have reached a peak of more than 15,000,000 in mid-1945, numbered about 5,000,000 in 1947. The strength of the army, including MVD and NKVD troops (secret police organizations with paramilitary formations) was estimated at from 3,500,000 to 4,100,000 in more than 200 divisions. The air force had from 600,000 to 700,000 men and about 25,000 planes, and the navy from 300,000 to 400,000, adding up to a tonnage of about 445,000. Almost a million troops were stationed outside Soviet borders, and at least 700,000 were estimated to be located in the Soviet Far East.

Information about the Red fleet is as vague as that about the army and air force. In 1947 it was believed to include four battleships (including ex-H.M.S. *Royal Sovereign*), 10 cruisers (including ex-U.S.S.

Milwaukee and ex-German *Nürnberg*), more than 100 submarines, more than 50 destroyers, and large flotillas of coastal and river craft, patrol vessels, minesweepers and other ancillary craft. At least one 16-inch-gun battleship (*Tretii International*) and one 22,000-ton aircraft carrier (*Krasnaya Znamya*) were nearing completion in 1946, and an extensive construction program under the fourth Five-Year Plan was in progress.

On its face, about 18 percent of the 1947-48 budget was allotted for military expenditures, but expenditures linked to the armed forces in other parts of the budget, including police allotments and industrial commitments under the Five-Year Plan, greatly increased this percentage.

EDUCATION. The school system throughout the country is based upon uniform text books and the same syllabus, although a number of hours are allowed for native language, literature and history in the non-Russian schools. All schools are state controlled, and compulsory education begins at the age of seven. Coeducation is being abolished and separate schools established for boys and girls. The boys' curriculum stresses military training; the girls', housework. Enrollment in primary and secondary schools in 1945 was 32,000,000. Under the Defense Ministry are the newly established Suvorov military schools for the training of future officers. In the academic year 1945-46, 772 colleges and institutions of higher learning were functioning, with a student body of 560,000. Literacy was estimated at 81 percent in 1940.

AGRICULTURE. Formerly an agricultural country, the Soviet Union has grown in the last 25 years into an industrial-agricultural power, with agriculture making great advances at the same time. The total area under cultivation was 259,500,000 acres in 1913, 291,600,000 acres in 1929, and 388,000,000 acres in 1941.

PRODUCTION OF PRINCIPAL CROPS 1913, 1929, 1939

(in millions of tons)

Crop	1913	1929	1939
Wheat	26.2	18.8	45.1*
Raw cotton	.7	.8	.97
Flax	.2†	.4†	.7
Sugar beets	10.9	6.2	23.2
Potatoes	23.3	45.6	65.6†

*1938. †Average for five preceding years. ‡1937.

ANIMAL INDUSTRY (millions of head)

Animal	1916	1933	1938
Horses	35.8	16.6	17.5
Cattle	60.6	38.4	85.9
Sheep and goats	121.2	50.2	102.5
Pigs	20.9	12.1	30.6

The Union's diverse climate permits the growing of the most varied crops, ranging from the temperate to the subtropical. Production of beet sugar (short tons) in 1940 was 2,365,000; tea, 14,220; raw silk, 1,900; (1938) oats, 18,728,000; rye, 23,071,000; barley, 9,039,000; maize, 2,965,000; rice, 349,000; wool, 151,000; citrus fruit, 16,094.

Under the current Five-Year Plan, it is contemplated that by 1950 the grain harvest will be 127,500,000 tons (a 7% increase over the prewar average), sugar beets 26,000,000 (22% increase), raw cotton 3,100,000 (25% increase) and flax 800,000 tons (39% increase).

INDUSTRY. Almost all industry in the Soviet Union is carried on by organizations owned or controlled by the state. About 80 percent of the total state industries is controlled by 291 large trusts. The industrialization of the country has been one of the major objectives of its leaders during the past 25 years. The completion of the first two Five-Year Plans (1928-32, 1933-37) and of most of the third (1937-42) saw a great increase in the volume and versatility of Soviet industry. The following table reveals the growth of some of the principal industries, expressed in the value of annual production based on prices prevailing in 1926-27:

**VALUE OF ANNUAL PRODUCTION
OF SOME PRINCIPAL INDUSTRIES**
(in millions of roubles)

Industry	1913	1933	1938
Electric light and power	45	855	2,262
Coal	301	839	1,518
Ferrous metallurgy	755	1,616	4,023
Metal working industries	1,446	11,283	33,613
Chemical	457	2,301	6,809
Textile	3,519	6,049	11,255

On Jan. 1, 1936, there were 574,064 industrial enterprises, and the value of the output of industry in 1938 was \$9,160,992,300. Production figures (1939) included 549,300,000 pairs of shoes, 49,482,798 tons of metal, and 4,230,973,843 yards of textiles.

The large-scale evacuation of plants to the East and the construction of new plants there during World War II, coupled with the eastward orientation of industry prior to the war, has shifted the balance to newly developed regions in Central Asia and Siberia from the Moscow-Leningrad area and the Ukraine. The new regions are now the center of Soviet industrial power, accounting for almost all magnesium and aluminum production, and more than 60 percent of the pig iron and steel production. The production of consumers' goods continues to be subordinate to the production of heavy capital equipment.

Under the current Five-Year Plan the

gross output of Soviet industry in 1950 is fixed at 205,000,000,000 roubles (48% above the prewar level). An increase is planned in the output of pig iron to 19,500,000 tons and of steel to 25,400,000 tons (35% above prewar), involving the construction of 45 additional blast furnaces, 180 open-hearth furnaces, 90 electric furnaces and 104 rolling mills. The plan calls for a 100 percent increase in engineering production and equipment and for an increase of 3.7 times in the metallurgical industries. Even if the 1950 steel target is reached, however, Soviet production would be only on a level equaling that of the U. S. in 1913. The value of capital investments in the period 1946-50 is fixed at 157,500,000,000 roubles.

FOREIGN TRADE. Soviet foreign trade is a state monopoly, and foreign goods are purchased in accordance with an over-all plan conducted under the supervision of the Foreign Trade Ministry. Connected with the Ministry are a number of export-import and transport combines.

The U.S.S.R. share in world exports (1938) was 1.1 percent; imports, 1.2 percent. No later statistics are available. Exports (1938) totaled \$115,000,000, of which 28.2 percent went to the United Kingdom, 8.8 percent to Belgium, 7.3 percent to the U. S., 7.0 percent to the Netherlands and 6.6 percent to Germany. Imports totaled \$122,780,000, of which 28.5 percent came from the U. S., 16.9 percent from the United Kingdom, 7.2 percent from the Netherlands, 4.8 percent from China and 4.7 percent from Germany. Principal exports were grain, 21.9 percent; lumber and timber, 16.8 percent; furs, 9.9 percent; petroleum and products, 7.9 percent; and cotton goods and threads, 4.5 percent. Imports included machines and industrial equipment, 26.8 percent; iron and steel, 10.3 percent; wool, 5.3 percent; electrical machines and parts, 4.2 percent; and live animals, 3.7 percent. From June 22, 1941, until 1945, large supplies were received from Britain and Canada, and from Oct. 1, 1941, until after V-J Day, a total of \$11,141,470,000 in lend-lease assistance from the U. S.

COMMUNICATIONS. The Soviet merchant fleet aggregated about 937,000 gross tons in 1946, exclusive of about 400,000 dead-weight tons received as the Soviet share of the German merchant marine. Merchant ship construction has been subordinated to naval construction under the fourth Five-Year Plan. The principal ports include Leningrad on the Gulf of Finland, Murmansk and Archangel on the Arctic Ocean and White Sea, respectively; Vladivostok on the Sea of Japan; and the Black Sea ports of Odessa, Sevastopol, Novorossiisk and Batum. River and canal transport is extremely important. In 1938 there were 64,803 miles of navigable rivers and 1,751 miles of canals.

Railway mileage (1945) totaled 66,000, of which about 30 percent was double-tracked. Freight traffic reached 569,117,490 tons and 1,777,800,000 passengers carried in 1938. Highway mileage (1938) totaled 831,330, of which 29,808 were paved and 24,506 improved gravel roads. Under the current Five-Year Plan, war-devastated railway lines are being rebuilt and another 4,510 miles are to be constructed, including 3,310 miles in Siberia.

Air traffic is assuming great importance, especially in the central Asiatic portion of the U.S.S.R. Prior to World War II, the network of air routes covered 69,845 miles. In 1945, operations of the Civil Air Fleet tripled those for 1940. Moscow is connected with the capitals of all the Union republics by daily air service, and there are regular services to the Far East and Europe. No foreign air routes have been allowed to enter the U.S.S.R.

FINANCE. National expenditures for 1946 were estimated at 319,269,000,000 roubles, and revenue at 335,000,000,000 roubles. The Soviet budget includes charges for the financing of industry, transportation, agriculture and commerce—items which ordinarily are handled through private channels in other countries. The internal debt in 1939 amounted to \$2,667,369,471.

MINERALS. The U.S.S.R. is probably the richest country in the world in mineral resources, containing deposits of almost every known mineral. It ranks fourth in coal production, first in chromite, second in iron ore, third in petroleum, first in platinum, and retains high rank in the production of numerous others. The richest mineral region is that of the Ural Mountains, which lacks only good coking coal. Total coal production in 1945 was estimated at 160,000,000 tons. Other production figures included aluminum (1945) 95,100 short tons, copper (1942) 176,000 tons, gold (1940) 4,250,000 oz., lead (1943) 139,000 tons, platinum (1939) 100,000 oz., silver (1938) 8,040,000 oz., tin (1938) 14,330 tons, zinc (1938) 77,161 tons. Petroleum production (1945) was 149,000,000 barrels and was estimated at 457,060 barrels daily in 1946, including eastern Poland and Sakhalin. Under the current Five-Year Plan annual coal production is to be raised to 250,000,000 tons by 1950, oil production to 234,000,000 barrels. Production increases in other minerals are also planned.

FORESTS. With a forested area of about 1,582,000,000 acres, the U.S.S.R. possesses a large proportion of the world's timber reserves. Most of the forested area is in Siberia, but there are also valuable stands in the Caucasus.

FISHERIES AND FURS. The numerous rivers, lakes and surrounding seas (except the Black Sea) are rich in fish; the catch averages more than 1,000,000 tons. The ac-

quisition of former Japanese fisheries in Karafuto and the Kuriles will double the output of the Far Eastern fish industry. Trapping is an important secondary industry, especially in eastern Siberia.

TOPOGRAPHY. The U.S.S.R. is the largest unbroken political unit in the world, occupying more than one-seventh of the land surface of the globe. The greater part of its territory is a vast plain stretching from eastern Europe to the Pacific Ocean. This plain, relieved only occasionally by low mountain ranges (notably the Urals), consists of three zones running east and west: (1) the frozen marshy tundra of the Arctic; (2) the more temperate forest belt; and (3) the steppes or prairies to the south, which in southern Soviet Asia became sandy deserts. The topography is more varied in the South, particularly in the Caucasus between the Caspian and Black Seas, and in the Tien-Pamir mountain system bordering Afghanistan, Sinkiang and Mongolia. Mountains (Stanovoi and Kolyma) and great rivers (Amur, Yenisei, Lena) also break up the sweep of the plain in Siberia.

CLIMATE. The climate necessarily is varied, but for the most part is continental. In general the climate of the northern and central regions is characterized by long, cold winters and by summers which are shorter and cooler than those in the northern part of the United States. Siberia has the coldest winters in the world; the January average at Verkhoyansk is -59° . In the southern regions the climate varies between temperate and subtropical. The Uzbek, Turkmen and Kazakh S.S.R.'s are largely desert and semi-desert areas. In the central belt rainfall is fairly uniform, averaging about 15 inches east of the Urals and 20 inches to the west. In the tundra to the north it drops to about 8 inches and to 4 inches in the southern regions.

Average daily low temperature at Moscow is about 5° (high, 14°) in January, the coldest month; average daily high is 71° during July, the warmest month.

Uruguay (Republic)

(República Oriental del Uruguay)

Area: 72,172 square miles.

Population (est. 1944): 2,235,000 (white, 86%; mestizo, 12%; Indian, 2%).

Density per square mile: 30.9.

President: Luis Batlle Berres.

Principal cities (est. 1945): Montevideo, 747,665 (capital); Paysandú, 50,000 (meat packing); Salto, 48,000 (cattle raising); Minas (1942), 32,000 (farming center).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Uruguay, a little larger than North Dakota, has many distinctions. It is the smallest and most densely populated of the sovereign South American nations. It has one of the highest proportions of white population and one of the lowest illiteracy rates in all Latin America. Despite constant pressure from Argentina, and some concessions to that powerful neighbor, Uruguay has managed to remain one of the most democratic and progressive of Latin American states.

Juan Díaz de Solís, a Spaniard, discovered Uruguay in 1516, but the Portuguese were first to settle it when they founded Colonia in 1680. After a long struggle, Spain wrested the country from Portugal in 1778. Uruguay revolted against Spain in 1811, only to be conquered in 1816-20 by the Portuguese from Brazil. Independence was re-asserted with Argentine help in 1825, and the republic was set up in 1830. There followed a long period of factional strife between two groups still in existence at the present time—the Blancos and the Colorados—which dealt in plot and intrigue and bred only financial ruin and political folly. President José Batlle y Ordóñez launched a series of social reforms in 1911-15 which started Uruguay on its modern career of democracy, although Gabriel Terra, elected president in 1931, grabbed dictatorial power and modified the constitution to permit his re-election.

Terra was succeeded in 1938 by Alfredo Baldomir and, in 1943, by Juan José de Amézaga, both of whom worked closely with the U. S. on global and hemispheric policy. In 1946, Tomás Berreta was elected president; he took office March 1, 1947 for a four-year term and was replaced after his death on Aug. 1, 1947, by Luis Batlle Berres.

GOVERNMENT AND DEFENSE. Under the 1936 constitution, Uruguay elects every four years a president, a vice president, a cabinet and a two-house congress—a 99-member Chamber of Deputies and a 30-member Senate. The cabinet and congress are chosen by proportional representation. All literate citizens may vote, including women, who may also sit in congress.

Service in the army (1940 strength: 8,-093) is voluntary, but national guard service is compulsory in wartime. There is a police force of about 5,500, and an air force that had 463 men and 45 planes in 1939. The navy had a 1,150-ton sloop, a surveying vessel and several smaller craft on Jan. 1, 1947.

SOCIAL AND ECONOMIC CONDITIONS. Uruguay's illiteracy rate is 35 percent; primary education is compulsory, and all education is free. There were in 1943 a total of 191,191 pupils enrolled in 1,592 public schools, and 20,000 in the university at Montevideo. Uruguay's high percentage

of white population includes many foreign-born, mostly Italian and Spanish, but some Brazilian, Argentine and French.

Cattle, sheep, meat and wool dominate the Uruguayan economy. With nearly 80 percent of its grassy land devoted to grazing, there were in 1944 a total of 19,001,-310 sheep. The 1945-46 wool clip was 87,500 short tons. With only about 5 percent of land cultivated, a third of this grows wheat, the chief crop (1944-45: 381,700 short tons). Other crops are corn, flax for linseed, oats, potatoes, beans, fruits, tobacco, alfalfa and grapes. From its grapes, Uruguay makes 70,000,000 liters of wine a year.

Uruguay slaughters more than a million head of cattle and sheep a year, and meat processing is the largest manufacturing industry. There are many modern plants for chilling or freezing meat, and plants for preparation of liquid extract of beef.

During World War II Uruguay doubled its foreign trade, and most of the increase went to the U. S. Exports in 1946 were \$150,822,000 (1945: \$122,012,000) and imports \$147,419,000 (1945: \$114,759,000).

In value, wool is the leading export, about 45 percent of the total, followed by canned meat, frozen beef and hides. Chief imports are oil, gasoline, sugar, iron and steel. The U. S. accounted for 43 percent of Uruguay's total foreign commerce in 1946. Uruguay also trades extensively with Britain, Brazil and Argentina.

Steamers of 14-foot draft can travel halfway up the Uruguay River border, and smaller craft can go nearly the length of that border. The Río Negro is navigable only in its lower course. Railway mileage in 1945 totaled 1,800, of which 90 percent was British-owned. Highway mileage was 8,514.

The 1944 budget put revenue at 136,894,-503 pesos, and expenses at 136,900,000 pesos; deficit financing continued for the sixth straight year. The public debt on June 30, 1947, was 692,100,000 pesos. U. S. investments in 1942 were \$10,918,000; British investments on Dec. 31, 1946, £43,661,-918.

Minerals are of slight importance. In the north, some gold is mined and there are small deposits of silver, lead, copper, talc and lignite.

TOPOGRAPHY AND CLIMATE. Uruguay, a low rolling plain in the south and a low plateau in the north, has a 120-mile Atlantic shore line, a 235-mile frontage on the Río de la Plata, and 270 miles on the Uruguay River, its western boundary. The climate is good. Average summer temperature in January and February is 71°, and average winter temperature in July is 50°. Frost is almost unknown. Average rainfall is 35 inches, heaviest in the autumn.

Vatican City State

(Stato Città Vaticana)

Area: 108.7 acres.

Population (est. 1941): 970 (Italian, 85%; Swiss and others, 15%).

Ruler: The Supreme Pontiff, Pius XII.

Monetary unit: Lira.

Languages: Latin, Italian.

Religion: Roman Catholic.

The Vatican City State, sovereign and independent, is situated on the Vatican hill on the right bank of the Tiber in northwest Rome. The area has been intimately associated with the history of the Roman Catholic Church since the time of the martyrdom of St. Peter. From it the Pope exercised temporal sway for many centuries over a large part of central Italy; in 1859 the Papal States comprised an area of some 17,000 square miles. During the struggle for Italian unification (1860-70), most of this area became part of the Kingdom of Italy.

By an Italian law of May 13, 1871, the temporal power of the Pope was abrogated, and the territory of the Papacy was confined to the Vatican and Lateran palaces and the Villa of Castel Gandolfo. The Popes consistently refused to recognize this arrangement, and by the Lateran Treaty of Feb. 11, 1929, between the Vatican and the Kingdom of Italy, the exclusive dominion and sovereign jurisdiction of the Holy See over the city of the Vatican was again recognized, thus restoring the Pope's temporal authority over the area. Accompanying the treaty were conventions regulating the position of the Catholic Church in Italy and providing for reimbursement to the Vatican in final settlement of the claims of the Holy See against Italy for the loss of temporal power in 1870-71.

The Supreme Pontiff is Pius XII (Eugenio Pacelli), born at Rome, March 2, 1876, proclaimed cardinal in 1929, and elected the 262nd Pope on March 2, 1939.

The Pope has full legal, executive and judicial powers. Executive power over the area is in the hands of a governor appointed by the Pope and exclusively responsible to him.

The College of Cardinals is the Pope's chief advisory body, and upon his death the cardinals elect his successor for life. The cardinals themselves are created for life by the Pope. When complete, the College consists of 70 members: 6 Cardinal-Bishops, 50 Cardinal-Priests, and 14 Cardinal-Deacons.

The central administration of the Roman Catholic Church throughout the world is carried on in the Vatican by 12 congregations, 3 tribunals and 5 offices.

In its diplomatic relations with foreign

countries, the Vatican is represented by the Papal Secretary of State. In 1946 the Vatican maintained diplomatic relations with 36 states through its papal-nuncios (ambassadors) and inter-nuncios (ministers). Apostolic Delegates, representatives without accredited rank, are maintained in a number of other countries.

The Vatican has its own railway station, postal facilities, coinage, newspaper, radio and television system. In addition to the Vatican itself, which includes St. Peter's Square, extraterritorial rights are enjoyed by 13 buildings in the city of Rome outside the Vatican City.

Venezuela (Republic)

(Estados Unidos de Venezuela)

Area: 352,143 square miles.

Population (est. 1946): 4,289,000 (mestizo, 65%; white, 20%; Negro, 8%; Indian, 7%).

Density per square mile: 12.2.

President: Rómulo Betancourt.

Principal cities (census 1941): Caracas, 269,030 (capital); Maracaibo, 112,519 (oil); Valencia, 53,938 (farming center); Barquisimeto, 54,176 (coffee, sugar, mining).

Monetary unit: Bolívar.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Venezuela, a third larger than Texas, has a stormy political past and the distinction of being the world's second greatest producer of oil, outranked only by the U. S. In South America it is the sixth country in size, the only independent country lying entirely north of the equator, the second most illiterate country, and the birthplace of Simón Bolívar, who led the liberation of much of the continent from Spain.

Columbus discovered Venezuela on his third voyage in 1498. A subsequent Spanish explorer, for reasons of his own, gave the country its name, meaning "Little Venice." There were no important settlements until Caracas was founded in 1567. With Bolívar taking part, Venezuela was one of the first South American colonies to revolt against Spain in 1810, but it was not until 1821 that independence was won. Federated at first with Colombia and Ecuador, the country set up a republic in 1830, and then sank for many decades into a condition of revolt, dictatorship and corruption climaxed by the ironhand regime of Antonio Guzmán Blanco from 1870 to 1889. The U. S. intervened in 1895 to force an arbitration between Great Britain and Venezuela in a dispute over the boundary with British Guiana. From 1908 to 1935, when he died, General Juan Vicente Gómez ruled tyrannically over the nation, picking various satellites to alternate with him in the presidential palace. He was

succeeded in 1936 by General Eleazar López Contreras. The president during World War II, General Isaías Medina Angarita, cooperated with the U. S. but permitted such political freedom that he was overthrown on Oct. 19, 1945.

Out of that revolt, militarist in nature, the Socialist leader Dr. Rómulo Betancourt emerged as provisional president, and his government received U. S. recognition on Oct. 30, 1945. Betancourt's party, the leftist Acción Democrática, won 137 out of 160 seats in an election held Oct. 27, 1946, for a Constituent Assembly to draft a new constitution.

GOVERNMENT AND DEFENSE. Venezuela is a federal union of 20 states, a federal district and two territories. Congress is composed of a 40-member senate and an 87-member chamber of deputies, both elected directly. Under the new constitution promulgated July 5, 1947, the president is elected by popular vote for four years and may not succeed himself.

Military service is compulsory, with a one- to three-year initial training period. The army has about 10,000 men. The navy has several gunboats and corvettes, and other minor craft. Four coast guard patrol vessels were acquired from the U. S. in 1944.

SOCIAL AND ECONOMIC CONDITIONS. Illiteracy in 1943 was estimated at 70 percent, second in South America only to that of Bolivia. Primary education between 7 and 14 is compulsory. School enrollment in 1946 exceeded 300,000 in 5,543 primary and 122 secondary schools. There are two universities—Los Andes at Mérida, with 700 students, and Central University at Caracas, with 2,800 students.

The principal crop is coffee, grown on 60,000 plantations on the slopes of the coastal mountains. Annual production averages 1,000,000 bags of 60 kilograms each. Exports of cacao in 1945 were 13,750 tons. Other important crops are sugar, tobacco, cotton, corn, wheat and tropical fruits. Stockraising, centered east of Lake Maracaibo, is important. Estimates in 1945 showed 4,000,000 cattle, 750,000 calves, 60,000 sheep and lambs, and 1,400,000 goats and kids. Cattle hide production in 1944 was 10,600 tons.

There are few industries, the most important being woodworking, cotton textiles and tobacco products. Electric power is plentiful, and a law of 1943 prepared the way for the beginning of an oil refining industry.

Oil, most of which is found on the northwest shore of Lake Maracaibo, is by far the dominant factor in the economy. It accounts for 95 percent of exports, gives the country a big foreign trade balance and a treasury surplus. Exports in 1945 were valued at 1,026,000,000 bolívares and

imports at 580,980,000 bolívares. After oil, exports are gold, hides, livestock, coffee and cacao. Chief imports are metals, metal products, machinery, food products, textiles and chemicals. Most Venezuelan oil goes to the U. S., via Curaçao and Aruba, refining centers in the West Indies. About 35 percent of other exports are U. S. purchased. The U. S. supplies 85 percent of imports, with Britain second.

Highways include 3,829 miles for all-weather use, and 1,600 miles of unimproved road. Railway mileage is about 685, largely in unconnected short lines, ten national and two British-owned. In 1945 Venezuela had 38 airports serving Pan American, K.L.M. (Dutch), and two government-owned lines. La Gualra and Puerto Cabello are the chief seaports. Navigable rivers total 6,500 miles. Most of the tonnage sent along the Orinoco—navigable for 700 miles for river steamers of 12-foot draft—is transhipped at Port of Spain, Trinidad.

The preliminary 1947-48 budget estimated expenditures at 1,199,500,000 bolívares (final 1946-47 estimate: 1,038,991,054 bolívares). The treasury surplus on Sept. 30, 1946, totaled 212,105,000 bolívares as against a bonded domestic debt of 24,500,000 bolívares on Jan. 31, 1946. There is no foreign debt. Venezuela's excellent financial position is largely due to its revenue from taxes on oil and other minerals. British investments on Dec. 31, 1946, were £17,894,526; American investments in 1942, \$262,376,000.

Oil production increased from 116,000-000 barrels in 1931 to 388,491,414 in 1946. In addition to oil, Venezuela has gold mines in the region southwest of the Orinoco delta. Output in 1945 was 58,000 oz. Of minor importance are bauxite, coal, copper, iron, tin, asbestos and asphalt. Diamond production in 1944 was 59,000 carats.

Much of the country is covered by forests still barely exploited, particularly south of the Orinoco. One of the oldest industries is the pearl fisheries off Margarita, Coche and Cubagua islands.

TOPOGRAPHY AND CLIMATE. An unusual setting of mountain systems breaks Venezuela into four distinct areas: (1) the Maracaibo lowlands; (2) the mountainous region in the north and northwest; (3) the Orinoco basin with the llanos (vast grass-covered plains) on its northern border and great forest areas in the south and southeast; (4) the Guiana highland, south of the Orinoco, accounting for nearly half the national territory. About 80 percent of Venezuela is drained by the Orinoco and its 400 tributaries. The coast line, 1,876 miles long, is indented in the northwest by the Gulf of Maracaibo. A narrow channel joins the gulf to Lake Maracaibo, which is nearly the size of Lake Ontario.

The climate is tropical and unhealthy except where modified by altitude; it approaches the mild temperate in the higher western mountains. Most rainfall occurs between April and October, and the rest of the year is dry. At La Gualra, the mean annual temperature is 81°, at Caracas, 70°, at Cumaná, 83°.

Yugoslavia (Republic)

(Federaciona Narodna Republika
Jugoslavijsa)

Area: 95,576 square miles.*

Population (est. 1941): 16,261,125* (Serbian, 46%; Croat, 28.5%; Slovene, 8.5%; German, 3.6%; others [Magyar, Albanian, Rumanian, Czech], 13.4%).*

Density per square mile: 170.1.*

Chairman of Presidium of National Assembly: Ivan Ribar.

Prime Minister: Josip Broz (Tito).

Principal cities (census 1931): Belgrade (Beograd), 238,775 (capital); Zagreb, 185,581 (Croat commercial center); Subotica, 100,058 (wheat, livestock); Sarajevo, 78,173 (Bosnian manufacturing center); Skopje, 68,334 (Serbian trading center).

Monetary unit: Dinar.

Languages: See Population.

*Excluding 1947 treaty awards.

HISTORY. Yugoslavia, twice the size of Pennsylvania and fronting on the Adriatic Sea opposite Italy, was formed in 1919 out of some of Europe's oldest trouble spots in the Balkans. After a brief and unstable history of 25 years, it emerged from World War II as a full-fledged Russian satellite—and is still a trouble spot. Defeated in her efforts, despite Soviet support, to secure the Italian port of Trieste at the head of the Adriatic during 1946 treaty negotiations, Yugoslavia nevertheless succeeded in securing the cession by Italy of most of the Istrian peninsula under the terms of the peace treaty signed at Paris on Feb. 10, 1947.

The 1919 components of Yugoslavia were the old kingdoms of Serbia and Montenegro, and the following: Bosnia-Herzegovina, formerly administered jointly by Austria and Hungary; Croatia-Slavonia, which had had limited autonomy under Hungary; and Slovenia and Dalmatia, formerly administered by Austria.

Alexander I, son of King Peter of Serbia, became the first king of the new country on Aug. 16, 1921. His reign was a rocky one because the Croats, under Dr. Stephen Radic, unceasingly sought autonomy. Finally, a Croat assassinated Alexander in Marseille in Oct., 1934, and since his son Peter was a minor, a regency was set up under Prince Paul, the new king's uncle.

After pursuing an increasingly pro-Axis policy under the regent, Yugoslavia signed the Axis Pact on March 25, 1941; this caused the overthrow of the government two days later. On April 6 the country was invaded by the Nazis and was speedily occupied. While the king and government fled to the Near East and later to London, Yugoslavia was divided into German, Italian, Hungarian and Bulgarian occupation zones. Puppet regimes were established in Croatia and Serbia.

Inside Yugoslavia, the Axis occupation was fought by two guerrilla armies—the Chetniks under Draja Mikhailovic, who supported the monarchy; and the Partisans under Marshal Tito (Josip Broz), who leaned toward Russia. These two groups fought not only the Germans, but also each other. In Nov., 1943, Tito established an Executive National Committee of Liberation to act as a provisional government, thus repudiating King Peter in exile.

In the elections of Nov. 11, 1945, Tito's forces won overwhelmingly, partly because the monarchist factions boycotted the balloting. Convening on Nov. 29, the new Assembly abolished the monarchy and set up the Federal People's Republic of Yugoslavia. Tito was named prime minister and his government won British and U. S. recognition.

Two events stood out in 1946: the summary trial and execution of Mikhailovic, and the shooting down of U. S. planes over Yugoslav territory. The latter "incident" was vigorously protested by the U. S. Government, which forced Tito to retreat from his adamant position.

In 1947, as Yugoslavia continued its uncompromising support of the Moscow government in foreign affairs, the center of world attention shifted from Venezia Giulia to the Yugoslav-Greek border, where a United Nations Commission of Inquiry investigated Greek charges that Tito's government was fomenting border clashes and supporting the activities of leftist guerrillas in northern Greece. Inside the country the Government continued its ruthless oppression and elimination of opposition factions.

GOVERNMENT AND DEFENSE. The constitution of Jan. 31, 1946, is derived from Moscow. There is a federal assembly with one representative for each 50,000 electors in the country. There is a "house of the peoples" in which the six federal units—Serbia, Croatia, Slovenia, Bosnia-Herzegovina, Macedonia and Montenegro—each have 25 representatives, while three other areas have a total of 25. The presidium, a joint committee of both houses, carries on when parliament is out of session, but actual control of the country is in the hands of the Yugoslav Communist Party.

The present army, based upon the National Liberation Army and partisan detachments which at one time had a strength of about 800,000, is being re-organized and re-equipped along Soviet lines. Many of its higher officers are attending Red Army military schools. Its strength was unofficially estimated in 1947 at 300,000 men, poorly equipped and including police forces. The air force had about 1,000 planes, with many Russian models. The navy was believed to include a destroyer, a submarine and two corvettes on Dec. 31, 1946.

SOCIAL AND ECONOMIC CONDITIONS.

Education on the elementary level is compulsory and free. In 1938 there were 8,727 elementary schools, with 1,393,422 pupils. In addition to many professional, industrial and agricultural schools, there were 119 high schools with 116,655 pupils and 22 training colleges for teachers with 3,199 pupils. The three universities—at Belgrade, Zagreb and Ljubljana—had 16,207 students.

Agriculture occupies about 80 percent of the population. The total area under cultivation in 1939 was 58.9 percent. The principal crops are corn, wheat, sugar beets, hemp, hops, opium (in Macedonia) and tobacco (chiefly in Macedonia and Herzegovina). Other important crops are barley, beans, potatoes, flax, clover and lucerne. Excellent wines are produced in Dalmatia and Herzegovina and along the Danube. The fruit industry is important, especially in Serbia and Bosnia.

Manufactures are limited for the most part to consumers' goods. Legislation passed Dec. 5, 1946, nationalized all private economic enterprises, public works and industries in 42 branches of the national economy including mining, metallurgy, all industries processing natural products, food processing, beverages, building, transportation, and all land, sea and air communications.

Yugoslavia has only limited access to ports on the Adriatic because of the difficulty in crossing the coastal range with railways and highways. Waterways, especially the Danube, are important. The merchant marine in 1940 numbered 169 vessels of 483,000 gross tons. Wartime losses

were about 202,000 tons. Railway mileage in 1939 totaled 6,655, mostly state owned. Highway mileage was 26,183, largely unimproved.

Exports in 1939 totaled \$125,419,000, of which 32 percent went to Germany; imports were \$108,069,000, of which 48 percent came from Germany. Major exports were lumber, wood products, live animals, copper ore, tobacco and foodstuffs. Major imports were textiles, iron and steel products, coal, vehicles and machinery. Most of the nation's postwar trade has been with the Soviet Union and its satellites, statistics for which are not available.

The 1947 budget balanced with estimated revenues and expenditures of 85,854,000,000 dinars. The national debt in 1939 was 24,620,000,000 dinars.

Yugoslavia is the Balkans' principal mineral producer. Production has been as follows in recent years, in short tons: copper (1943 smelter production) 88,000, bauxite (1945) 165,000, chromite (1943) 71,500, lead (1940 smelter production) 36,200, iron ore (1941) 550,000, coal (1939) 489,421. Many rushing mountain streams make a high potential of hydroelectric power, used frequently in the development of mining.

Forests cover about 30 percent of the country, with beech, fir and oak the most common trees.

TOPOGRAPHY AND CLIMATE. About half of Yugoslavia is mountainous. In the north, the Dinaric Alps rise abruptly from the sea and progress eastward as a barren limestone plateau called the Karst. Montenegro is a jumbled mass of mountains, containing also some grassy slopes and fertile river valleys. Southern Serbia, too, is mountainous. In the north and northeast, a rich plain drained by the Danube is the most fertile area of the country.

The Danube and tributaries—the Drava, Sava and Morava—in the northeast are the principal rivers. On the Adriatic, Yugoslavia's climate is mild and Mediterranean, but in the interior the winters are cold and the summers hot. January temperatures in Belgrade average about 30°, and summer temperatures are usually in the 70's. Rainfall is heaviest throughout the country from October to January.

A record of later events may be found in 1947 News Record.

Explorations and Discoveries

Africa

Country or place	Event	Explorer or discoverer	Date
Sierra Leone	Visited	Hanno, Carthaginian seaman	c. 520 B.C.
Congo River	Mouth discovered	Cão, Portuguese navigator	c. A.D. 1484
Cape of Good Hope	Doubled	Bartholomeu Diaz, Portuguese navigator	1488
Gambia River	Explored	Mungo Park, Scottish explorer	1795
Sahara Desert	Crossed	Denham and Clapperton, English explorers	1822-23
Zambezi River	Discovered	Livingstone, Scottish explorer	1851
Sudan	Explored	Barth, German explorer	1852-55
Victoria Falls	Discovered	Livingstone	1855
Lake Tanganyika	Discovered	Burton and Speke, British explorers	1858
Congo River	Traced	Stanley, British explorer	1877

Alaskan Coast	Sighted	Gvosdeff, Russian sailor	1731
Mackenzie River (Canada)	Discovered	Mackenzie, Scottish-Canadian explorer	1789
Northwest U.S.	Explored	Lewis and Clark	1804-06
Northeast Passage (Arctic Ocean)	Navigated	Nordenskiöld, Swedish explorer	1879
Greenland	Explored		
Northwest Passage	Navigated	Peary, American explorer	1892
		Amundsen, Norwegian explorer	1906

Country or place	Event	Explorer or discoverer	Date
South America			
Continent	Visited	Columbus, Italian navigator	1498
Brazil	Discovered	Cabral, Portuguese explorer	1500
Peru	Conquered	Pizarro, Spanish adventurer	1532-33
Amazon River	Explored	Orellana, Spanish explorer	1541
Cape Horn	Discovered	Schouten, Dutch navigator	1615
Oceania			
New Guinea	Visited	Menezes, Portuguese explorer	1526
Australia	Visited	Jansz, Dutch explorer	1606
Tasmania	Visited	Tasman, Dutch navigator	1642
Australia	Explored	Sturt, English explorer	1828
Australia	Explored	Burke and Wills, Australian explorers	1861
Arctic, Antarctic and Miscellaneous			
Ocean exploration	Expedition	Magellan's ships circumnavigated the globe	1519-22
Spitsbergen	Visited	Barents, Dutch navigator	1596
(Arctic Europe)			
Antarctic Circle	Crossed	Cook, English navigator	1773
Antarctica	Discovered	Bellingshausen, Russian navigator	1820-21
Antarctica	Explored	Wilkes, American explorer	1840
North Pole	Discovered	Peary, American explorer	1909
South Pole	Discovered	Amundsen, Norwegian explorer	1911

The Seven Wonders of the World

Monuments and works of art which gained pre-eminence during the Alexandrian era.

THE PYRAMIDS OF EGYPT

A group of three pyramids, *Khufu*, *Khafra* and *Menkaura* at Giza, outside modern Cairo, is often called the first wonder of the world; it is also the oldest and only surviving "wonder." The largest pyramid, built by Khufu (Cheops), had an original estimated height of 482 ft. (now approximately 450 ft.). The exact date of its construction is unknown but has been estimated at 4700 B.C. The other two were built possibly 100 to 150 years later.

HANGING GARDENS OF BABYLON

Often listed as the second wonder, these gardens were supposedly built by Nebuchadnezzar about 600 B.C. to please his queen, Amuhia. They are also associated with the mythical Assyrian Queen, Semiramis. Archeologists surmise that the gardens were laid out atop a vaulted building, with provisions for raising water. The terraces were said to rise from 75 to 300 ft.

The Walls of Babylon, also built by Nebuchadnezzar, are sometimes referred to as the second (or the seventh) wonder instead of the Hanging Gardens.

STATUE OF ZEUS (JUPITER)

AT OLYMPIA

The work of Phidias (5th century B.C.), this colossal figure in gold and ivory was reputedly 40 ft. high. All trace of it is lost, except for reproductions on coins.

TEMPLE OF ARTEMIS (DIANA)

AT EPHEBUS

A beautiful structure, begun about 350 B.C. in honor of the Goddess who embodied the reproductive power and who was represented as having many breasts. The temple, having columns 60 feet high, is an example of Ionic architecture. It was destroyed by invading Goths A.D. 262.

MAUSOLEUM AT HALICARNASSUS

This famous monument was erected by Queen Artemisia in memory of her husband, King Mausolus of Caria in Asia Minor, who died in 353 B.C. Some remains of the structure are in the British Museum. This shrine is the source of the modern word "mausoleum."

COLOSSUS AT RHODES

This bronze statue of Helios (Apollo), about 105 ft. high, was the work of the sculptor Chares, who reputedly labored for 12 years before completing it in 280 B.C. It was destroyed during an earthquake in 224 B.C.

PHAROS OF ALEXANDRIA

The seventh wonder was the Pharos (lighthouse) of Alexandria, built by Sosthenes of Cnidus during the 3rd century B.C. on the island of Pharos off the coast of Egypt. It was destroyed by an earthquake in the 13th century.

LEADING COUNTRIES OF THE WORLD IN VARIOUS RICHES AND NATURAL RESOURCES

(Footnotes at end of table. In designations "No data," relative rank of nation is estimated.)

MINERAL PRODUCTION (Figures approximate)	Country and rank

^{1s}1944. ^{2s}1942. ^{3s}1946. ^{4s}1941. ^{5s}1943.

^{7s}Exclusive of bare fallow; comparable data for France, Italy, Germany and Japan not available.

^{8s}Exports only.

^{9s}Creamery production only.

^{10s}Including caseln and curd.

^{11s}Production in freezing plants and factories. ^{12s}Including buffaloes.

^{13s}Including Austria.

^{14s}Including wool exported on skins.

^{15s}Including Manchuria. ^{16s}1940.

^{17s}Before outbreak of World War II.

^{1s}Latest comparable data available; no data available for Germany and France. ^{2s}1935.

^{3s}Jan.-June, 1946. ^{4s}Jan.-May, 1946.

^{5s}Including Luxembourg.

^{6s}380,000, including motorcycles, in 1939.

^{7s}Figures by Caldwell-Clements, Inc.

^{8s}Including loudspeakers hooked to relay exchanges. ^{9s}1945.

^{10s}Sea-going iron and steel steam and motor vessels of 1,000 gross tons and over; vessels acquired by a nation through capture, trans-

fer, etc., excluded from such country's total and added to that of country from which acquired.

^{4s}Excluding armed forces overseas.

^{5s}Including police and para-military organizations under military control.

^{6s}Tonnage includes only battleships, battle cruisers, aircraft carriers, cruisers, destroyers, and submarines.

^{7s}All military aircraft in operation, reserve, and storage; figures for other countries include only aircraft available for immediate use.

Cook	Southern Alps	South Island, New Zealand	12,349
Hood	Cascades	Oregon	11,253
Aneto (Maladetta)	Pyrenees	Spain	11,167

Largest Islands of the World

Island and status	Location	Area, sq. mi.
GREENLAND (Danish colony)	North Atlantic	839,782
NEW GUINEA (Dutch colony, west part; Australian mandate, northeast part; Australian territory, southeast part)	Southwest Pacific	312,329
BORNEO (Part of United States of Indonesia, under Dutch crown, south part; British protectorate and colony, north part)	South China Sea	290,285
MADAGASCAR (French colony)	Off east coast of Africa	228,589
BAFFIN (Canada, Northwest Territories)	Arctic Ocean	201,600
SUMATRA (Part of Republic of Indonesia, under Dutch crown)	Indian Ocean	163,145
HONSHU (Japanese home island)	Sea of Japan—Pacific	91,278
GREAT BRITAIN (England, Scotland, and Wales)	Off coast of northwest Europe	88,133
VICTORIA (Canada, Northwest Territories)	Arctic Ocean	80,450
ELLESMERE (Canada, Northwest Territories)	Arctic Ocean	75,024
CELEBES (Part of East Indonesia, one of the United States of Indonesia)	Southwest Pacific	69,255
SOUTH ISLAND, NEW ZEALAND	South Pacific	58,092
JAVA (Part of self-governing Republic of Indonesia, under Dutch crown)	Indian Ocean	48,504
NORTH ISLAND, NEW ZEALAND	South Pacific	44,281
NEWFOUNDLAND (British colony)	North Atlantic	42,734
CUBA (Republic)	Caribbean Sea	42,350
LUZON	Philippine Islands	40,814
ICELAND (Republic)	North Atlantic	39,688
MINDANAO	Philippine Islands	36,906
HOKKAIDO (Japanese home island)	Sea of Japan—Pacific	34,084
IRELAND (Eire, republic, south part; Northern Ireland, part of United Kingdom)	West of Great Britain	31,840
HISPANIOLA (Dominican Republic, east part; Haitian republic, west part)	Caribbean Sea	30,075
TASMANIA (Australian state)	South of Australia	26,215
BANKS (Canada, Northwest Territories)	Arctic Ocean	25,992
CEYLON (British colony)	Indian Ocean	25,332
SAKHALIN (U. S. S. R.)	North of Japan	24,560
DEVON (Canada, Northwest Territories)	Arctic Ocean	20,484
TIERRA DEL FUEGO (East part to Argentina; west part to Chile)	Southern tip of South America	18,530
MELVILLE (Canada, Northwest Territories)	Arctic Ocean	16,164
SOUTHAMPTON (Canada, N. W. Territories)	Hudson Bay	16,114

Oceans and Seas

Name	Area, sq. mi.	Average depth, feet	Greatest depth, feet	Place of greatest depth
Pacific Ocean	63,801,700	14,048	35,400	Off Mindanao
Atlantic Ocean	31,830,800	12,880	30,246	Off Puerto Rico
Indian Ocean	28,356,300	13,002	22,968	Off Sumatra-Java
Arctic Ocean	5,440,200	3,953	17,850	77° 45' N.; 175° W.
Mediterranean Sea*	1,145,100	4,688	15,564	Off Cape Matapan, Greece
Caribbean Sea	1,049,500	8,685	22,788	Off Cayman Islands
South China Sea	895,400	5,419	18,090	West of Luzon
Bering Sea	875,800	4,714	13,422	Off Buldir Island
Gulf of Mexico	618,200	4,874	12,744	Sigsbee Deep
Okhotsk Sea	589,800	2,749	11,400	146° 10' E.; 46° 50' N.
East China Sea	482,300	617	9,126	25° 16' N.; 125° E.
Hudson Bay	475,800	420	600	Near entrance
Sea of Japan	389,100	4,429	12,276	Central Basin
Andaman Sea	308,000	2,854	12,392	Off Car Nicobar Island
North Sea	222,100	308	2,165	Skagerrak
Red Sea	169,100	1,611	7,254	Off Port Sudan
Caspian Sea	168,000	597	3,103	Southern part
Baltic Sea	163,000	180	1,380	Off Gottland

*Including Black Sea and Sea of Azov.

Famous Waterfalls of the World

Waterfall	Location	River	Height, feet
Cuquenán	Venezuela	Cuquenán	2,000
Sutherland	South Island, N. Z.	Arthur	1,904
Tugela	Natal, South Africa	Tugela	1,800
Ribbon (Yosemite)	California	Creek flowing into Yosemite	1,612
Upper Yosemite	California	Yosemite Creek, tributary of Merced	1,430
Gavarnie	Southwestern France	Gave de Pau	1,385
Takkakaw	British Columbia	Tributary of Yoho	1,200
Widow's Tears (Yosemite)	California	Tributary of Merced	1,170
Staubbach	Switzerland	Staubbach (Lauterbrunnen valley)	980
Trummelbach	Switzerland	Trummelbach (Lauterbrunnen)	950
Middle Cascade (Yosemite)	California	Yosemite Creek, tributary of Merced	910
Multnomah	Oregon	Multnomah Creek, tributary of Columbia	850
Vettisfos	Norway	Morkedöla	850
King Edward VII	British Guiana	Courantyne	840
Gersoppa	India	Sharavati	830
Kaeteur	British Guiana	Pataro	741
Kalambo	Tanganyika	705
Fairy (Mt. Rainier Park)	Washington	Stevens Creek	700
Maradalsfos	Norway	Stream flowing into Eklisdalsvand (lake)	650
Skykkjefos	Norway	In Skykkjedal (valley) of Inner Hardanger Fjord	650
Terni	Italy	Velino, tributary of Nera	650

Taughannock	New York	Taughannock Creek, tributary of Cayuga Lake	215
Shoshone	Idaho	Snake	195
Narada (Mt. Rainier Park)	Washington	Paradise	168
Niagara	New York-Ontario	Niagara	167
Tower (Yellowstone)	Wyoming	Tower Creek, tributary of Yellowstone	132

PRINCIPAL DESERTS OF THE WORLD

Desert	Location	Approximate size	Approximate elevation, ft.	Features
Atacama.....	North Chile.....	400 mi. long.....	7,000-13,500.....	Rugged. Rich in minerals, particularly nitrates.
Black Rock.....	Northwest Nevada.....	70 mi. long and in places 20 mi. wide, or about 1,000 sq. mi.	2,000-5,000.....	Usually dry, with a white alkali crust. Serves as the "sink" of the Quinn River and at times covered with water a few inches deep.
Colorado.....	Southeast California from San Geronio Pass to Gulf of California.....	200 mi. long and a maximum width of 50 mi.	Few feet above to about 250 below sea level.....	Average 90° F. Has reached 125° F. in the shade. Contains Salton Sea (overflow of Colorado).
Dash-i-i-Kavir.....	Southeast of Caspian Sea in Iran.....		2,000.....	A salt depression. Vast deposits of solid rock salt.
Dash-i-i-Lut.....	Northeast of Kerman in Iran.....		1,000.....	Sand desert.
Gobi (Shamo or "Desert of Sand")	Covers most of Mongolia.....	800 by 400 mi., or at least 300,000 sq. mi.	3,000-5,000.....	Sandy soils with much alkali. Some well-watered areas. Several caravan routes. Fossil remains.
Great Arabian.....	Most of Arabia.....	1,500 mi. long.....		Series of arid plateaus with scattered oases.
Syrian (El Hamad)	North of 30° N. Latitude.....		1,850.....	Stony with numerous wadis (dry stream beds).
Nefud (Red Desert)	South of Jaufr.....	400 mi. long and average of 200 mi. wide.....	3,000.....	Almost waterless but rich in pasture in the rainy season (winter and spring). Large sand dunes.
Dahna.....	Southeast of Nefud.....	400 by 30 mi.....		Waterless but rich in pasture in winter and spring.
Rub' al Khali.....	South portion of Nejd.....	About one-half the continent.....	600-1,000.....	Areas of "fixed dunes" and stony ("gibbers") wastes.
Great Australian (includes: Great Sandy; Gibson; Great Victoria; Arunta.)	Western portion of Australia.....			Salt desert with numerous salt flats. Some used in setting world automobile speed records.
Great Salt Lake.....	West of Great Salt Lake to Nevada-Utah line.....	80 by 50 mi.....	4,500.....	Mild climate. Red sand. Some vegetation and game.
Kalahari.....	South Africa between the Orange and Zambezi Rivers.....	400 by 600 mi., or about 120,000 sq. mi.....	Over 3,000.....	Flat sandy wastes interspersed with broad expanses of clay soil. Water found only in wells.
Kara Kum (Desert of Khiva or "Black Sands")	Southwest Turkistan south of Lake Aral.....	110,000 sq. mi.....		
Kizil Kum.....	Central Turkistan southeast of Lake Aral.....	370 by 220 mi., or about 70,000 sq. mi.....	160 near Lake Aral to 2,000 in southeast.....	Arid grazing land. Numerous sand dunes moving southeast.
Mohave.....	North of Colorado Desert and south of Death Valley in southeast California.....	15,000 sq. mi.....	2,000.....	Temperature range 70°-125° F. during summer months. Hot dry alkali flats interspersed with salt-pans or lakes. Scanty vegetation.
Painted Desert.....	Northeast Arizona.....	75 mi. wide.....	High plateau 5,000.....	Mild climate. Named for its bright colorful rocks.
Sahara.....	Northern states of Africa to about 15° N. Lat. and from Red Sea to the Atlantic Ocean.....	3,200 mi. greatest length along 20° N. Lat.; width varies from 800 to 1,400 mi. Area over 3,500,000 sq. mi.	440 below sea level to 11,000 above with an average elevation of 1,400-1,600.....	Varied surface. East Libyan desert is sand; central part contains rocky hills and mountains; west consists of low stony plains and dunes. Crossed by chain of oases. Well-marked caravan routes.
Libyan.....	East portion of the Sahara west of Nile.....	More than 500,000 sq. mi.....		Series of deep depressions, some below sea level. Famous caravan routes through oases such as Kharga, Dakhla, Farafra, Bahariya, Siwa and Cufr.
Nubian.....	From Red Sea to great west bend of the Nile.....		2,500.....	Sand and rock desert with some small fertile oases.
Takla Makan.....	S. Central Sinkiang in Tarim Basin.....	700 mi. long.....		Extremes of climate: -22°-86° F. in April. Uninhabited. Can be safely crossed only in winter. Marco Polo left a vivid description of this desert.
Thar (Indian).....	Northwest India, chiefly in Rajputana.....	About 300 mi. by 380 mi.....	About 500.....	Sandy with strips of cultivable land.

Principal Rivers of the World

River	Source	Outflow	Approx. length, miles
Nile	Lake Victoria	Mediterranean Sea	4,000
Missouri-Mississippi	Source of Red Rock Creek, Montana	Gulf of Mexico	3,988
Amazon	Glacier-fed lakes in Peru	Atlantic Ocean	3,900
Ob	Altai Mts., U.S.S.R.	Gulf of Ob	3,200
Yangtze Kiang	Tibetan plateau	China Sea	3,100
Amur	Confluence of Shilka (U.S.S.R.) and Argun (Manchuria) Rivers	Tartary Strait	2,900
Congo	Between Lakes Nyasa and Tanganyika	Atlantic Ocean	2,900
Lena	Baikal Mts., U.S.S.R.	Arctic Ocean	2,800
Yenisei	Tannu Ola Mountains, western Mongolia	Arctic Ocean	2,800
Hwang Ho (Yellow)	East part of Kunlun Mts., west China	Yellow Sea	2,700
Niger	Border of Sierra Leone	Gulf of Guinea	2,600
Mackenzie	Head of Finlay River, British Columbia	Beaufort Sea (Arctic Ocean)	2,525
Mékong	Tibetan highlands	South China Sea	2,500
Missouri	Actual headwaters Red Rock Creek; beginning of Missouri at conflu- ence of Gallatin, Mad- ison, Jefferson Rivers	Mississippi River (confluence) 2,723 (headwaters)	2,475
Mississippi	Lake Itasca, Minnesota	Gulf of Mexico	2,470
Paraná	Confluence of Paranaíba and Grande Rivers, southeast Brazil	Río de la Plata (Atlantic Ocean)	2,450
Murray	Australian Alps, New South Wales	Indian Ocean	2,310
Irtish	Altai Mts., U.S.S.R.	Ob River	2,300
Volga	Valdai plateau, U.S.S.R.	Caspian Sea	2,300
Madeira	Confluence of Gauporé and Maumoré Rivers on Bolivia-Brazil boundary	Amazon River	2,000
St. Lawrence	St. Louis River, Minn.	Gulf of St. Lawrence	1,900
Rio Grande	San Juan Mts., Colorado	Gulf of Mexico	1,800
São Francisco	Southwest Minas Geraes, Brazil	Atlantic Ocean	1,800
Yukon	Head of Nisutlin, north- west British Columbia	Bering Sea	1,800
Salween	Tibet, south of Kunlun Mountains	Gulf of Martaban	1,750
Danube	Black Forest, Germany	Black Sea	1,725
Euphrates	Dumlu Dagh (moun- tains), Turkey	Persian Gulf	1,700
Indus	Himalayas	Arabian Sea	1,700
Orinoco	Sierra Parima on Vene- zuela-Brazil boundary	Atlantic Ocean	1,700
Tocantins	Near Pyrenopolis, south- east Brazil	Pará River (Atlantic Ocean)	1,700
Brahmaputra	Himalayas	Ganges River (Bay of Bengal)	1,680
Nelson	Head of Bow River, west Alberta, Canada	Hudson Bay	1,660
Si Kiang	Plateau of Yunnan, southwest China	China Sea	1,650
Zambezi	11°21' S.; 24°22' E., North- ern Rhodesia, Africa	Indian Ocean	1,600
Ganges	Himalayas	Bay of Bengal	1,500
Amu Darya (Oxus)	Nicholas Range, Pamir Mountains, U.S.S.R.	Lake Aral	1,500

River	Source	Outflow	Approx. length, miles
Paraguay	Mato Grosso, Brazil	Paraná River	1,500
Yapurá	Andes, Colombia	Amazon River	1,500
Arkansas	Central Colorado	Mississippi River	1,450
Dnieper	Valdai Hills, U.S.S.R.	Black Sea	1,400
Rio Negro	Watershed between Orinoco and Amazon	Amazon River	1,400
Ural	Southern Ural Mountains, U.S.S.R.	Caspian Sea	1,400
Colorado	Middle Park, northern Colorado	Gulf of California	1,360
Ohio-Allegheny	Plateau in Potter County, Pa.	Mississippi River	1,306
Orange	Basutoland, Africa	Atlantic Ocean	1,300
Irrawaddy	Confluence of N'mai and Mali Rivers, northeast Burma	Bay of Bengal	1,250
Columbia	Columbia Lake, British Columbia	Pacific Ocean	1,214
Saskatchewan	Western Alberta, Canada	Lake Winnipeg	1,205
Darling	Central part of Eastern Highlands, Australia	Murray River	1,160
Tigris	Taurus Mts., Turkey	Persian Gulf	1,150
Don	Lake Ivan, U.S.S.R.	Sea of Azov	1,100

Selected Glaciers and Ice Fields of the World

Present-day glaciers and ice fields represent only a small remnant of the vast areas covered during the glacial epoch. The principal glacial areas are in the Antarctic, Greenland, nearly all the high mountain ranges, and many of the islands in the Arctic regions.

NORTH AMERICA

Alaska. The greatest number of the tens of thousands of glaciers in southern Alaska lie between 56° and 61° N, in mountains facing the North Pacific.

Malaspina extends about 50 mi. along the seaward base of Mt. St. Elias; it covers about 1,500 sq. mi. Part lies above the snow line (2,500 ft.), but most of it lies between snow line and 1,500 ft. It is formed by coalescence of many valley glaciers.

Muir, on the south slope of St. Elias Mountains, covers over 350 sq. mi. and is about 50 mi. long, 25 mi. wide and 1,500 ft. deep. It was much visited prior to the earthquake in 1899 which shattered the glacier and increased the discharge of ice so that ships no longer found it safe to approach close to the face.

Hubbard, over 80 mi. in length, is the longest valley glacier yet reported.

United States. Within the U. S. glaciers are found chiefly on the high volcanic peaks of the northern Cascade Mountains. None is much longer than 2 mi. Mt. Rainier (Washington) has the largest single-peak system in the U. S.: 28 glaciers with a total area of about 50 sq. mi. and numerous permanent snow fields. Glacier Peak (Washington) has more than 50 glaciers within a 30-mi. radius, moving from a snow field over 10 sq. mi. in area which covers the mountain top and fills the ancient crater. Mt. Baker and Mt. Adams (Washington), Mt. Hood (Oregon) and Mt. Shasta (California) also support glaciers.

In the Rocky Mountains, many small glaciers move for short distances from the perennial snowfields. More than 60 small glaciers are located in Glacier Nat'l. Park.

Canada. In the Cascade Mountains, glaciers are more prevalent than in the U. S. portion of the range. There are also many small glaciers in the Canadian Rockies.

Greenland. About 86 per cent of the surface, or 720,000 sq. mi., is covered by an ice cap, a continuous mantle of ice that covers valleys and mountains alike, forming a gently-sloping plateau of ice 10,000 ft. above sea level at its center, where the ice is about 8,000 ft. thick. Over most of the area it is about 2,000-5,000 ft. thick. Tongues of ice move through valleys in the mountainous coastal areas and end in the sea, where they discharge great icebergs. Ice forms 186 mi. of coast between Cape York and Wandel Land.

In the Jacobshavn District, the tallest icebergs, some 330-450 ft., originate in Jacobshavn Glacier. One iceberg had a measured volume of 7,851,481 cu. yd., twice the volume of the concrete in Hoover Dam.

Other important districts are Upernivik, Godthaab, Fredrikshaab, and Julianshaab.

EUROPE

Iceland. Snow fields and glaciers cover 5,170 sq. mi. (about 13%) of the surface. More than 120 glaciers are known on the island.

Vatnajökull is the largest ice-covered area in Iceland (3,280 sq. mi.). The largest glacier of the group covers 150-200 sq. mi.

Other large glaciers or snowfields are: Myrdalsjökull, covering 390 sq. mi.; Hofsjökull, covering 520 sq. mi.; and Langjökull, covering 500 sq. mi.

Norway. Jostedalbrae is the largest continental European icefield (over 500 sq. mi.). From it, most glaciers extend to 150-200 ft. above sea level.

Folgefond, between Hardangerfjord and its branch, Sörfjord, covers 110 sq. mi. It is the most southerly large ice-covered area in Norway.

Svartisen is second in size to Jostedalbrae, covering 230 sq. mi.; its glaciers are the only ones in Europe which descend almost to sea level.

Alps. It is estimated that there are 2,000 separate glaciers and snow fields. The lowest point reached by Alpine glaciers varies, but it is as low as 3,200 ft. above sea level at Grindelwald. Average altitude is about 4,200 ft., and perpetual snow line lies between 8,000 and 9,500 ft.

Aletsch Glacier is 10 mi. long and with its snow fields covers over 50 sq. mi. It is one of the finest glaciers in the Swiss Alps.

Unteraar and Viescher in the Bernese Oberland are each 10 mi. long.

Mer de Glace, on north slope of Mt. Blanc, is 9¼ mi. long, covers 16 sq. mi., and descends to 3,770 ft. Average flow is 2 ft. per day in summer and autumn.

Caucasus. There are an estimated 900 glaciers in the western half of middle Caucasus, few in the eastern half. All glaciers in central Caucasus are estimated to cover 625-650 sq. mi. Maliev, on Mt. Kazbek, is 36 mi. long. Bezingi (Ullu), 10.5 mi. long, descends to 6,535 ft.; Karagom, 9.5 mi. long, to 5,790 ft.; Leksy, 7.5 mi. long, to 5,690 ft.; and Tsey (Zea), 6 mi. long, to 6,730 ft.

ASIA

Thousands of little-known small glaciers, as well as some of the largest known, exist on the high mountains of Asia. Baltoro and Biafo in the Central Karakorum Range

(Kashmir) are among the largest existing glaciers. Rongbuk, on the north slope of Mt. Everest (Himalayas), ends at about 16,500 ft. Kyetrack, also on Mt. Everest, ends at about 15,400 ft.

NEW ZEALAND

New Zealand has a glacial system of some magnitude on South Island. Tasman, the largest glacier, is 18 mi. long, has a maximum width of 2 mi., and moves down the slope of Mt. Cook in the Southern Alps. Murchison, located near Mt. Cook, is

11 mi. long. Fox is 9.7 mi. long, covers 17 sq. mi., and ends 670 ft. above sea level, the lowest point attained by any glacier outside the Arctic and Antarctic regions. Franz Joseph is 8.5 mi. long, covers 16 sq. mi., and ends 690 ft. above sea level.

ANTARCTICA

Probably fewer than 100 of the 5,000,000 sq. mi. are free from permanent ice covering. It is doubtful if the ice is more than 5,000 ft. thick except in basins. Ice fronts vary from 100-400 mi. in width at the sea.

Volcanoes of the Earth

There are approximately 430 volcanoes (275 in the Northern Hemisphere and 155 in the Southern) with recorded eruptions in historical times. Of the 2,500 recorded eruptions, more than 2,000 have taken place in the Pacific area. Of known active volcanoes, 80 are of the submarine type.

ATLANTIC-INDIAN AREA

Mediterranean Region

Italy: Mt. Vesuvius, southeast of Naples (3,858 ft.). Only active volcano on mainland of Europe. Pompeii buried by an eruption, A.D. 79. Latest eruption in 1944.

Sicily: Mt. Etna, eastern Sicily (10,741 ft.). Two new craters formed in eruptions of Feb.-Mar., 1947.

Lipari Islands (north of Sicily): Stromboli (about 3,000 ft.). Called "Lighthouse of the Mediterranean."

Atlantic Area

Canary Islands: Pico de Teide (Teneriffe), on island of Teneriffe (12,192 ft.).

Cape Verde Islands: Fogo (over 8,000 ft.). Severe eruption in 1857.

Iceland: At least 25 volcanoes active in historic times. Has exceeded all other volcanic areas in output of lava. These volcanoes very similar to those in Hawaii.

Hekeia (4,747 ft.). Several craters, largest about $1\frac{1}{4}$ mi. in circumference. Most recent eruption reported Mar., 1947.

Skaptarjökull. Series of volcanoes near Skaptar; erupted in 1783 with large loss of life.

Askja (4,600 ft.). Largest in Iceland.

Jan Mayen Island: Beerenberg, northern part of island (over 8,000 ft.). Extinct.

British Cameroons: Mt. Cameroon (13,349 ft.). Has several craters. Last erupted in 1922.

Lesser Antilles (West Indian Islands): Mt. Pelée, in northwestern Martinique (about 4,400 ft.). Eruption in 1902 destroyed town of St. Pierre and killed approximately 40,000.

Indian Ocean Region

Comoro Islands (east of northern Mo-

zambique): One volcano, Kartala (over 8,500 ft.). Visible for over 100 miles. Last erupted in 1904.

Réunion Island (east of Madagascar): Piton de la Fournaise (Le Volcan) (8,610 ft.). Eruptions in the form of large lava flows.

Tanganyika Territory: Kilimanjaro (19,319 ft.). Extinct. Highest mountain in Africa.

THE PACIFIC AREA

Northwest Portion

Kamchatka: 14-18 active volcanoes.

Shiveluch (over 10,500 ft.). Most northerly volcano of Kamchatka group.

Klyuchevskaya (Kluchev) (15,913 ft.). Highest peak in Siberia; called the "Etna of Kamchatka." Reported active in 1946.

Koryatskaya (over 11,500 ft.). Violent eruption in 1895.

Kurile Islands: At least 13 active volcanoes and several submarine outbreaks.

Japan: at least 33 active vents.

Fujiyama (Fujisan), southwest of Tokyo (12,395 ft.). Symmetrical in outline, snow-covered. Regarded as a sacred mountain.

Adzumayama (7,733 ft.). Eruption in 1900 killed 82.

Asamayama (8,182 ft.). Continuously active; violent eruption in 1783.

Asosan (5,223 ft.). Crater 10 by 15 miles is the largest known in the world.

Bandalsan, about 125 miles north of Tokyo (9,037 ft.). Violent eruption in 1888 devastated a 27-square-mile area.

Two volcanic islets south of Japan emerged in ocean for brief time in 1946, then submerged.

Ryukyu archipelago: Nakano-shima (3,485 ft.); Suwanose-shima (2,697 ft.).

Bonin (Ogasawara) Islands: Mt. Suribachi, on Iwo Jima (546 ft.). A sulfurous steaming volcano. Raising of U. S. flag over Mt. Suribachi was one of the dramatic episodes of World War II.

New Britain archipelago: Numerous active vents, including Father, on New Britain (7,500 ft.).

Santa Cruz Islands: Tinakula (2,200 ft.).

New Hebrides: Lopevi (4,755 ft.).

Samoan archipelago: Savali. An eruption in 1905 did considerable damage. Niuafoou (Tin Can) between Samoa and Fiji Islands has a crater 6,000 feet below and 600 feet above water. Active in 1946.

Philippine Islands: 98 eruptive centers.

Taal, on Volcano Island in Lake Bom-bon (about 1,000 ft.). Crater over 7,500 ft. in diameter.

Mayon, in southeastern Luzon (7,946 ft.). An almost perfect cone. Continuous mild activity. In 1897 there was a destructive eruption. Considerable activity in 1947.

Moluccas: A volcanic chain of islands which contains several active volcanoes.

Hawaiian Group:

Mauna Loa (13,675 ft.). Also called "Long Mountain." Discharges more lava than any other volcano. Largest volcanic mountain in the world in cubic content. Its crater is 3.7 sq. mi. in area.

Mauna Kea (13,784 ft.). Highest mountain in group.

Hualalai (8,269 ft.). Has many small pit craters. Only lava flow in historic times was in 1801.

Kilauea (4,090 ft.). A vent in side of Mauna Loa but apparently erupts independently of it. One of the most spectacular and active craters. Crater has an area of 4.14 sq. mi.

Southwest Portion

Sumatra: Ninety volcanoes have been discovered; 12 are now active. The most famous, Krakatoa, is a small volcanic island in the Sunda Strait. Numerous volcanic discharges occurred in 1883. One explosion caused the disappearance of the highest peak and the northern part of the island. Fine dust was carried around the world in the upper atmosphere. Over 36,000 persons lost their lives in resultant tidal waves, which were felt as far away as Cape Horn. Active again in 1928.

Java: Thirteen of 125 volcanic centers are active. Few serious eruptions. Galunggung is famous for two destructive eruptions in 1822. It is thought that over 100 villages and about 4,000 lives were lost.

Lesser Sunda Islands: Fifteen eruptive cones. Tamboro on Soembawa (Sumbawa) (about 9,000 ft.). Was 13,000 ft. prior to a severe eruption in 1815, which ejected an estimated 36 cu. mi. of material.

Melanesian area: Volcanoes are present on New Guinea, New Hebrides, Santa Cruz, Solomons, and on numerous other small islands.

New Zealand: Tarawera, on North Island. Severe eruption in 1886 destroyed the famous pink and white sinter terraces of Rotomahana, a hot lake.

Ngauruhoe (7,515 ft.). Emits steam and vapor incessantly.

Northeast Portion

Aleutian area: There are 32 active vents known, and numerous inactive cones in remarkably straight line.

Shisaldin, on Unimak (8,683 ft.). Latest eruption Jan., 1947.

Bogosloff, on Bogosloff island (Castle) (about 1,000 ft.). Mountain first appeared after an eruption in 1796. New Bogosloff island appeared in 1883. Two more islands appeared in 1906 and 1907. These blew up in 1909 and were replaced by two others.

Alaska:

Wrangell (14,005 ft.).

Katmai (about 7,500 ft.). On June 6, 1912, a violent eruption occurred, during which the "Valley of Ten Thousand Smokes" was formed.

United States: Lassen Peak, in California (10,453 ft.). Only observed active volcano in the United States. Last period of activity in 1914-17. Other mountains of volcanic origin include Mt. Shasta, Mt. Hood, Mt. Rainier, and the mountain that contains Crater Lake.

Mexico:

Popocatepetl (17,888 ft.). Crater 673 ft. deep and $2\frac{1}{2}$ mi. in circumference. Not entirely extinct; steam still escapes.

Colima, in group of same name (14,219 ft.). Group has had frequent eruptions.

Orizaba (Citlaltepetl) (18,696 ft.). Probably the most symmetrical volcanic cone.

Tuxtla (4,900 ft.). Had a violent eruption in 1793 but is now quiescent.

Paricutin. A new volcano. First appeared in Feb., 1943, in a cornfield. In less than a week a cone over 140 ft. high developed with a crater one quarter mile in circumference. Cone grew over 1,500 ft. in 1943. Still active and growing.

Guatemala:

Santa María Quezaltenango (12,361 ft.). Frequent activity between 1902-08 and 1922-28 after centuries of quiescence. Most dangerously active vent of Central America. Other volcanoes include Tajumulco (13,814 ft.) and Atitlán (11,633 ft.).

El Salvador: Active volcanoes include Izalco, "beacon of Central America," first appeared in 1770 and is still growing; San Salvador, which had a violent eruption in 1923; Conchagua, which erupted with considerable damage early in 1947; San Miguel; and Sociedad.

Nicaragua: Volcanoes include Telica, Coseguina, and Momotombo (4,126 ft.). Between Momotombo on the western shore of Lake Managua and Coseguina overlooking the Gulf of Fonseca, there is a string of more than 20 cones, many still active.

Costa Rica: Four volcanic cones whose bases merge are Poás (8,895 ft.), Barba (9,280 ft.), Irazú (10,525 ft.), and Turrialba (11,350 ft.).

Southeast Portion

Colombia: Huila (18,700 ft.), a vapor-emitting volcano, and Tolima (18,438 ft.).

Ecuador:

Cotopaxi (19,498 ft.). Perhaps the highest active volcano in the world. Possesses a beautifully formed cone.

Interesting Caves and Caverns of the World

Aggtelek. In village of same name, northern Hungary. Large stalactitic cavern about 5 miles long.

Altamira Cave. Near Santander, Spain. Contains animal paintings (Old Stone Age art) on roof and walls.

Antiparos. On island of same name in the Grecian Archipelago. Some stalactites are 20 ft. long. Brilliant colors and fantastic shapes.

Blue Grotto. On island of Capri, Italy. Cavern hollowed out in limestone by constant wave action. Now half filled with water because of sinking coast. Name derived from unusual blue light permeating the cave. Source of light is a submerged opening, light passing through the water.

Carsbad Caverns. Southeast New Mexico. Largest underground labyrinth yet discovered. Three levels, 754, 900 and 1,320 feet below the surface.

Fingal's Cave. On island of Staffa off coast of western Scotland. Penetrates about 200 ft. inland. Contains basaltic columns almost 40 ft. high.

Ice Cave. Near Dobsina, Czechoslovakia. Noted for its beautiful crystal effects.

Jenolan Caves. In Blue Mountain plateau, New South Wales, Australia. Beautiful stalactitic formations.

Kent's Cavern. Near Torquay, England. Source of much information on Paleolithic man.

Cayambe (19,186 ft.). Almost on equator. Summit perpetually snow-covered.

Other volcanoes include **Tunguragua** (16,689 ft.), **Sangay** (17,470 ft.), and **Antisana** (over 18,000 ft.).

Peru and Bolivia: Many active volcanoes. **Misti**, near Arequipa, Peru (19,200 ft.). **Sajama**, in Bolivia (21,320 ft.).

Licancábur, in Bolivia (about 19,500 ft.).

Chile and Argentina: About 25 active or potentially active volcanoes.

Luray Cavern. Near Luray, Virginia. Has large stalactitic and stalagmitic columns of many colors.

Mammoth Cave. Limestone cavern in central Kentucky. Cave area is about 10 miles in diameter but has at least 150 miles of irregular subterranean passages at various levels. Temperature remains fairly constant at 54°F.

Peak Cavern or Devil's Hole. Derbyshire, England. About 2,250 ft. into a mountain. Lowest part is about 600 ft. below the surface.

Postumia (Adelsberg) Grotto. Near Postumia in Julian Alps, about 25 miles N.E. of Trieste. Stalactitic cavern, largest in Europe. **Pluca (Pivka)** River flows through part of it. Caves have numerous beautiful stalactites.

Singing Cave. Iceland. A lava cave; name derived from echoes of people singing in it.

Wind Cave. In Black Hills of South Dakota. Limestone caverns with stalactites and stalagmites almost entirely missing. Variety of crystal formations called "boxwork."

Wyandotte Cave. In Crawford county, southern Indiana. A limestone cavern with five levels of passages; one of the largest in North America. "Monumental Mountain," approximately 135 ft. high, is believed to be one of the world's largest underground "mountains."

Geysers

Geysers exist in many volcanic regions of the world such as Japan and South America, but their greatest development is in Iceland, New Zealand and Yellowstone National Park, Wyoming, U. S. A.

Iceland. The principal geyser area is about 30 miles northwest of Mt. Hekla, where there are more than 100 geysers and hot springs in about two square miles. The main ones are the following:

Great Geyser (Geysir). Sends up a column 160 to 180 ft. high intermittently from an opening more than 9 ft. across and about 70 ft. deep.

Strokkur (Churn). Constant bubbling and occasional eruptions.

New Zealand. There is a great profusion of boiling springs, steam jets and mud volcanoes northeast of Lake Taupo on North Island. Main geysers are **Waikite**, with a 30-35 ft. column, **Pohutu** and **Waimauku**.

United States

Yellowstone National Park, Wyoming. There are 120 named geysers in Yellowstone and perhaps half that number unnamed. Most of the geysers and the 4,000

hot springs are located in the western portion of the park. The most important ones are as follows:

Norris Geyser Basin has 18 or more geysers; the number varies. There are scores of steam vents and hot springs. *Valentine*, highest in basin, 75 ft. at 18-hour intervals; tube is 60 ft. long. *Minuté*, 15-20 ft. high, several hours apart. Others are small; these include *Steamboat*, *Fearless*, *Veteran*, *Vixen*, *Corporal* and *Monarch*. Some are dormant.

Lower Geyser Basin. In the 1870's it had 680 hot springs and geysers. Many now are only hot springs, but at least 18 are active geysers. *Fountain*, at one time very well known. Water thrown 75 ft. in all directions and at all angles. Now dormant. *Clepsydra*, very active; some eruption cycles last for several hours; maximum height 75 ft. *Great Fountain* plays every 12 to 13 hours for 30 minutes in spurts which rise from 60 to 80 ft.

Midway Geyser Basin has vast steaming terraces of red, orange, pink and other colors; pools and springs. *Excelsior Geyser* crater discharges boiling water into Firehole River at the rate of 6 cu. ft. per second.

Upper Geyser Basin includes: *Artemisia* sends up a column 35 ft. high for 10 to 15 minutes every 18 to 24 hours. *Fan* sends out fan-shaped eruptions about 60 ft. high every 2 or 3 days. *Riverside* has an unusual cone; throws water 75 ft. obliquely over the river from lower crater for half an hour. It has a remarkably regular interval of 8 hours between eruptions.

Rocket jets up to 70 ft. at intervals of 2 to 5 days. When its neighbor, *Grotto*, erupts simultaneously the jet is only 10 ft.

Grotto throws water 20 to 30 ft. for 15 minutes to 8 hours.

Giant erupts to 200 ft. Eruptions last an hour but are 7 days to 3 months apart. A single eruption has been estimated to contain 700,000 gallons.

Daisy sends water to a height of 75 ft. every 135 minutes.

Old Faithful sends up a column about 140 ft. high at average intervals of 65 minutes, varying from 35 to 80 minutes. Eruption lasts about 4 minutes. Discharges about 12,000 gallons of water at each eruption.

Giantess erupts like a small volcano every six to nine months. The eruption rises to a maximum height of 200 ft. and usually lasts 4½ hours.

Lion group: Lion, Lioness, Big Cub and Little Cub erupt irregularly from one to 18 times a day.

Castle is reported to have largest and most imposing cone of any active geyser in the world. Erupts twice a day to a height of 75 ft. but at times throws water continually to about 20 ft.

Mammoth Hot Springs. There are no geysers in this area. The formation is travertine. Sides of a hill are steps and terraces over which flow the steaming waters of hot springs laden with minerals. Each step is tinted by algae to many shades of scarlet, orange, pink, yellow and blue. Terraces are white where no water flows.

Other groups of geysers, hot pools and mud pots are located on the west shore of Shoshone Lake, on West Thumb Bay, at Mud Volcano, in the Grand Canyon of the Yellowstone, and on Mirror Plateau.

World Extremes of Climate

Highest recorded temperature:

World: 136° F. at Azlzia, Libya, North Africa, September 13, 1922.

United States: 134° F. at Death Valley, California, July 10, 1913.

Lowest recorded temperature:

World: -90° F. at Verkhoyansk, Siberia, U.S.S.R., February 5 and 7, 1892; a temperature of -94° F. was reported in Siberia during the winter of 1946-47 but was not verified by the Soviet government.

United States: -66° F. at Yellowstone Park, Wyoming, February 9, 1933.

Highest mean annual temperature:

World: 86° F. at Massawa, Eritrea, Africa.

United States: 77.3° F. at Tavernier, Florida.

Lowest mean annual temperature:

World: -14° F. at Framheim, Antarctica.

United States: -32.5° F. at Yellowstone Park, Wyoming.

Maximum rainfall for 24-hour period:

46 inches at Baguio, Luzon, Philippines, July 14-15, 1911.

Maximum recorded rainfall in one month:

241 inches at Cherrapunji, India, August, 1841 (over 150 inches fell in 5 consecutive days). Average annual rainfall is 426 inches.

Minimum recorded rainfall:

World: .05 inch at Iquique, Chile, average yearly fall during 25 years.

United States: 3.93 inches at Bagdad, California, the total for five years, 1909-13.

Average annual precipitation for the United States is about 29 inches.

Louisiana is the wettest state, with an annual average (55 years) of 49.98 inches.

Nevada is the driest state, with an annual average (48 years) of 9.06 inches.

Highest local average annual rainfall in the United States was 150.73 inches at Wynoochee Oxbow, Washington, based on a 13-year record.

Greatest 24-hour rainfall in the United States was 38.2 inches at Thrall, Texas, September 9-10, 1921.

Heavy snowfall records include 60 inches in one day at Giant Forest, California; 42 inches in 2 days at Angola, New York; 54 inches in 3 days at The Dalles, Oregon; and 96 inches in 4 days at Vanceboro, Maine. Greatest seasonal snowfall was 884 inches, over 73 feet, at Tamarack, California, during 1906-07.

Ancient Empires

The *Egyptian* and *Babylonian* empires, Near Eastern civilizations whose cultures mark the beginning of written history, had their origins in the nebulous period of ancient history prior to the year 4000 B.C. They developed rapidly in the fertile river valleys of the Nile in Egypt and the Tigris-Euphrates in Mesopotamia after the discovery of metals and the invention of writing. Their governments were all-powerful, with the people subjugated and without political rights. The Egyptians regarded their king as a god. In Babylon, the ruler was a priest-king, earthly representative of the gods. Nevertheless, these Near East cultures made great contributions in the eternal march of man; they advanced the ways of making and doing things, produced the earliest literature, developed the principles of law (the code of Hammurabi, Babylonian king of the 20th [or possibly 18th] century B.C., the oldest code of law) and science, learned the basic principles of art, and evolved early religious worship.

The influence of Babylon and Egypt was felt in the rise of the Semitic tribes of Syria, the Hittites in Asia Minor, and the people of the Aegean region. Between the years 1200 and 800 B.C., the small Syrian states grew to great power and then were overwhelmed by the great empire of the *Assyrians*, the warlike peasants of the Tigris valley, who took the lessons learned from the Babylonians and spread that culture over their domains. The Assyrians, like the Egyptians and the Babylonians, in turn fell under the power of the *Persian* kings in the century between 600 and 500 B.C. By 525 B.C., the Persian Empire extended from India to Egypt, the greatest the world had ever seen.

The lessons learned by these early Near Eastern civilizations were transmitted to *Greece*, which developed its illustrious empire in the Aegean region, after the inhabitants of the island of Crete had absorbed the Egyptian culture. The mainland Greeks overthrew the Cretans and in turn were succeeded by the Doric Greeks, who spread their culture across the Aegean, the Asia Minor coast, and into the Mediterranean and Black Sea regions. The characteristic Greek political institution was the city-state, first ruled by kings and often

temporary monarchical tyrannies, and finally by the participation of free citizens. Literature and the arts flourished, and by the 5th century B.C., when Athens became the great city of the Greeks, drama had risen to full maturity with the great tragedies of Sophocles and Euripides and the comedies of Aristophanes. Architecture and art advanced apace. The Greeks, learning much from their Egyptian teachers, produced such superb buildings as the Parthenon and created amazingly beautiful statues through the use of living models. Religion, which was closely linked with art, also flourished, as did the development of philosophy, under the great Socrates (470?-399 B.C.), Plato (427?-347 B.C.), and Aristotle (384-322 B.C.). Wars weakened the city-states, and finally they fell to the Macedonians under Alexander the Great in the 4th century B.C.

Last among the great ancient empires was the *Roman*, which developed in Italy and gained control over the Mediterranean region after absorbing the culture of Greece and combining with it new principles of law and art and teaching their new learning to the West. The development of the Roman civilization began in 510 or 509 B.C., when the peoples on the peninsula of Italy freed themselves from the rule of the Etruscans. The Romans, with a republican form of government, speedily conquered Italy and the Mediterranean region, and the Roman governors became men of great wealth, corrupting the city-state system and making it a graft-ridden machine of exploitation. The failure of the government to check this self-seeking influence brought on a revolt which resulted eventually in the rise of Julius Caesar to dictatorship in 46-44 B.C. Caesar's murder in the Senate at Rome was followed in 27 B.C. by the establishment of the one-man rule of Augustus over the Roman Empire. Legal practices were developed and became the foundations of modern law. Industry and trade were advanced and extended to China and India. Great roads, bridges and buildings were constructed, and literature attained a new peak. Judaism spread, to be followed by Christianity. The political structure of this last of the great ancient civilizations began to crumble in the 3d century A.D.

Languages of the World

Language	Number speaking	Language	Number speaking
American Indian: including Mayan, Quechua and 750-1,000 languages and dialects	15,000,000	Indonesian: including Balinese, Bisayan, Ilocano, Javanese, Malay, Malagasy, Sundanese, Tagalog	80,000,000
Amharic (Ethiopia)	5,600,000	Iranian: including Baluchi, Kurdish, Persian, Pushtu	26,500,000
Annamese (Indo-China)	20,000,000	Italian	50,000,000
Arabic	58,000,000	Japanese	80,000,000
Bantu: including Swahili, Zulu (S. Africa)	45,000,000	Javanese	32,000,000
Bengali (India)	63,000,000	Kanarese (India)	13,400,000
Berber dialects (N. Africa)	6,000,000	Korean	27,000,000
Bihari (India)	28,000,000	Lahnda (India)	10,000,000
Bisayan (Philippines)	5,500,000	Malay (Neth. Indies)	10,000,000
Bulgarian	7,000,000	Malayalam (India)	10,000,000
Burmese	11,000,000	Marathi (India)	23,000,000
Catalan (Spain)	6,000,000	Munda (India)	5,000,000
Chinese: including Mandarin, Cantonese and others	450,000,000	Oriya (India)	9,600,000
Cushitic: including Somali (Ethiopia)	7,000,000	Persian	12,000,000
Czech	8,000,000	Polish	30,000,000
Dravidian: including Kanarese, Malayalam, Tamil, Telugu (India)	80,000,000	Portuguese	60,000,000
Dutch	10,000,000	Punjabi (India)	18,800,000
English	225,000,000	Pushtu (Afghanistan)	8,000,000

		Turkish	18,000,000
		Uzbek (U.S.S.R.)	5,000,000
		Yiddish	5,000,000

Universities—Ancient and Modern

Universities, in the modern sense of the term, sprang up in the 12th and 13th centuries in response to the resurgence of learning that preceded the Renaissance in Europe. Procedure at the early universities was informal, with students gathering at some place in a city to listen to a pre-eminent teacher. There were no campuses, buildings or endowments. Actually, the term "university" once meant a guild or corporation; there were, in the medieval period, "universities" of bootmakers, weavers, etc. Thus the university of learning was similar in organization to the guilds. The students filled the role of apprentices and the teachers were the masters.

The first European university was that of Salerno in the 9th century, when it

was known as a school of medicine. By the 11th century, it had become one of the most famous medical schools of Europe.

University of Bologna. Organized in 1158 by students as a means of protection against the merchants and citizens of Bologna who had raised prices of foods and lodging. It was famous for its legal scholars. The students were organized into two guilds and exercised a great deal of authority over the administration and the professors; they controlled all academic matters except the granting of degrees.

Other Italian universities famed in the Middle Ages included those at *Arezzo, Ferrara, Florence, Modena, Naples, Padua, Pavia, Perugia, Siena and Vicenza.*

University of Paris. Originated between 1150 and 1170 in a cathedral school on the Ile de la Cité, it was later moved to the left (south) bank of the Seine, although it remained under the authority of the chancellor of Notre Dame. It developed into the most famous continental center of learning of its day. Its four principal schools were theology, medicine, law and arts. By the 14th century, the university had some 40 colleges, of which the *Sorbonne* became the most celebrated.

The universities of Paris and Bologna had a marked influence in the subsequent creation of other university centers. About 1200, there was a migration of students from Paris to *Oxford* (founded in the 12th century) and a decade or two later, from *Oxford* to *Cambridge* (also founded in the 12th century).

Other famous universities of the Middle Ages include the *University of Toulouse* (1233), *Salamanca* (1243), *Seville* (1254), *Orléans* (1305), *Valladolid* (1346), *Prague* (1347), *Kraków* (1364), *Vienna* (1364), *Erfurt* (1379), *Heidelberg* (1385), *Cologne* (1388), *Leipzig* (1409), *Rostock* (1419), *Louvain* (1426), *Freiburg* (1455), *Budapest* (1475), *Tübingen* (1477) and *Coimbra* (1537).

The Renaissance

The Renaissance gave fresh impetus to the universities of Europe. In France three of importance arose in the 15th century—the *University of Aix* (in Provence); the *University of Poitiers* (1431) and the *University of Caen* (1437).

Other French institutions of note that arose in this era were at *Bordeaux* (1441), *Valence* (1452), *Nantes* (1463) and *Bourges* (1465). New European universities were also founded at *Trier* (1450), *Ingolstadt* (1459), *Basel* (1460), *Mainz* (1476), *Uppsala* (1477), *Copenhagen* (1479), *Wittenberg* (1502) and *Frankfurt on Oder* (1506).

St. Andrews, founded in 1411, was the first university in Scotland. Others were the *University of Glasgow* (1453), the *University of Aberdeen* (1494) and the *College of Edinburgh* (1582). In Ireland, *Trinity College* was founded in Dublin in 1591.

Reformation and Post-Reformation

Until the Reformation, most of the institutions of higher learning in Europe were under the tutelage of the Catholic Church. After 1520, however, many established universities declared their independence of the Church. Cromwell's rule brought about new scholastic methods at both Oxford and Cambridge and the establishment of new colleges thoroughly imbued with Protestantism.

But the first Protestant university was

that of *Marburg*, Germany, founded in 1527. Other Protestant universities were: *Königsberg* (1544); *Jena* (1558); *Helmstedt* (1575); *Altdorf* (1575); *Giessen* (1607); *Strasbourg* (1621) and *Halle* (1693).

18th, 19th and 20th Centuries

Among the more famous institutions in this era was *Göttingen* (1736), whose school of history became celebrated throughout Europe. Others were: *Erlangen* (1743); *Berlin* (1809); *Bonn* (1818); *Lemberg* (Lwów) (1816); *Helsingfors* (1826); the *National University at Athens* (1837); *Bucharest* (1864); *Tokyo* (1868); *Sofia* (1888); *Kyoto* (1897), and *Constantinople* (or *Stamboul*) (1900).

Among the more famous British universities established in the 19th and 20th centuries were the *University of London* (1825); *Manchester* (1851); *Liverpool* (1881); the *Mason University College* in Birmingham (1900); *Leeds* (1904), and the *University College* in Sheffield (1905). The *University of Wales* is composed of colleges in Aberystwyth, Bangor, Cardiff and Swansea.

There are many important and large universities in the British dominions. In Canada, the famous *McGill University* in Montreal was founded in 1821. Others are the *University of Toronto* (1827); *Queens University* at Kingston, Ont. (1841); *Laval University*, Quebec (1852), and *Montreal University* (1876).

The early universities in India were patterned after London University rather than on the Oxford-Cambridge style, and were purely examining institutions. *Calcutta* and *Madras* universities were founded in 1857 as examining schools.

In Australia, the state plays an important role in the development of universities. The *University of Melbourne* (1853) has the largest enrollment. Among the others are *Adelaide* (1874); *Tasmania* (1890); *Queensland* (1909) and *West Australia* (1913).

There are also many well-endowed universities in New Zealand, South Africa, and other parts of the empire.

In 1755, Russia had only three universities—*Vilna* (1578), *Dorpat* (1832) and *Moscow* (1755). Other institutions developed later were the *University of Kharkov* (1804); *Kazan* (1804); *St. Petersburg* (1819); *St. Vladimir* in Kiev (1832); *Odessa* (1865); *Warsaw*, which is now Polish (1886) and *Tomsk*, in Siberia (1888). The building of universities after the Revolution of 1917 was spurred by the Soviet government.

In China, the growth of universities was hampered by the chaotic state of the government in the 1900's, the recurring civil wars and the conflict with Japan.

The United States

Universities in the United States marched in step with the progress of the nation. The early settlers brought a heritage of European culture which they planted in New England soil. The first university in the country was started as *Harvard College* in 1636, with an endowment totaling 800 pounds. Harvard was to become probably the most famous of the American universities, with an endowment in 1947 of more than \$178,000,000, a faculty of 2,190 members and a student enrollment of more than 12,000.

The *College of William and Mary* (1693) was the second institution of higher learning established in the colonies. Others started during the colonial period (current names only) are: *Yale* (1701); *University of Pennsylvania* (1740); *Princeton*

(1746); *Washington and Lee* (1749); *Columbia* (1754); *Brown* (1764); *Rutgers* (1766) and *Dartmouth* (1769).

After the Revolution of 1776, the state tax-supported university was established. The *University of Virginia* (1819) was a notable early example of this type.

Colleges for women grew up in the second quarter of the 19th century. Among these are: *Mt. Holyoke* (1837); *Elmira* (1855); *Vassar* (1861); *Wells* (1868); *Hunter* (1870); *Wellesley* (1870); *Smith* (1871) and *Bryn Mawr* (1880).

In the latter part of the 19th century, universities established by private endowments arose. Among these are: *Cornell* (1865), which is also a land-grant institution; *Johns Hopkins* (1876); *Stanford* (1885) and the *University of Chicago* (1891).

Libraries of the World

Europe and Asia

Among the great libraries of the world, the *British Museum* remains in the first rank. It has almost 4,000,000 printed volumes and about 55,000 manuscripts (one bookstack containing some 200,000 volumes was destroyed during a German air raid in World War II). The shelves required to house this massive amount of material measure 55 miles.

One of the finest libraries in the world is the *Bibliothèque Nationale* in Paris. In 1943 an inventory disclosed that it had some 4,500,000 volumes, 122,000 manuscripts and 500,000 maps and plans contained in 28,000 volumes.

The *State Library* in Berlin, founded in 1661, had about 2,130,000 volumes and 56,800 manuscripts. The *State Library* in Munich, founded by Duke Albrecht V of Bavaria, had 1,670,000 books and some 50,000 manuscripts.

The *Nationalbibliothek* in Vienna had 1,250,000 volumes and 27,000 manuscripts as well as a collection of 100,000 priceless papyri.

While not as large as some of the state libraries in other countries, the *Biblioteca Vaticana* has many priceless old manuscripts bequeathed to the Vatican over the centuries. The printed books number about 600,000 volumes, the incunabula about 6,000 and the manuscripts about 50,000.

Two of the more important Italian libraries are the *Biblioteca Nazionale* in Naples, which has about 1,000,000 volumes and 13,000 manuscripts; and the *Biblioteca Nazionale Centrale* in Florence, which houses 2,000,000 volumes, manuscripts and pamphlets.

Other famed libraries in Europe are the *Bibliothèque Royale* in Brussels, 1,000,000 volumes; the *Biblioteca Nacional* in Madrid,

1,210,520 volumes; *Biblioteca Nacional* in Lisbon, 800,000 volumes; and the *University Library* in Oslo, 850,000 volumes.

One of the largest libraries in the world is the *Gosudarstvennaya Publichnaya Biblioteka* in Leningrad (formerly St. Petersburg's Imperial Public Library); the state library of the U.S.S.R., is said to contain 5,000,000 volumes, 240,000 manuscripts and autographs, and many collections of valuable historical documents.

The second largest library in the Soviet Union, the *Lenin Memorial Library* in Moscow, has more than 4,000,000 printed volumes and many early printed books and manuscripts.

In the Far East, the most extensive libraries are found in Japan. The *Imperial Cabinet Library* in Tokyo prior to World War II contained more than a half million volumes.

The United States and Canada

The earliest libraries in the Colonial era were privately owned, although in 1731 Benjamin Franklin projected the first subscription library in Philadelphia. Endowments helped to set up many of the large libraries, although many of these institutions are now receiving state or municipal support.

The largest library in the United States is the *Library of Congress*, established in 1800 by an act of Congress. In 1947, it contained more than 7,000,000 books and ranked as the largest in the world. It extends its services to members of Congress and other government departments, and also offers excellent facilities for persons engaged in scholarly research.

The *New York Public Library*, with its 4,500,000 volumes, is the largest public library in the world.

Other large public libraries are those of Boston, Cleveland, Chicago, Los Angeles, Cincinnati and Brooklyn. There are two important reference libraries in Chicago, the *Newberry* and the *John Crerar*.

The growth of libraries attached to colleges and universities in the United States has been phenomenal, and some of the university libraries are among the largest in the country. Among them are (total volumes in parentheses): Harvard (4,705,000); Yale (3,540,000); University of California, including branches (2,159,000);

University of Illinois (2,072,000); Columbia (1,748,000); University of Chicago (1,500,000); University of Minnesota (1,365,000); University of Michigan (1,268,000); Cornell (1,221,000); University of Pennsylvania (1,014,000); Princeton (1,000,000); and Northwestern (987,000).

In Canada, the most important public library is that of Toronto, which has more than 500,000 volumes. Extensive libraries attached to the universities are at Queens (215,000), McGill (450,000), and Laval (825,000).

Museums of the World

(For U. S. museums see INDEX.)

The modern museum originated during the Renaissance, when the revival of interest in the arts and classical antiquity led princes, nobles and humanists to amass specimens of historical value and to house their collections in special buildings or galleries.

Art Museums

The *British Museum*, London, has two principal divisions—the Library and the Departments of Antiquities. Its library is one of the largest in the world, and contains such outstanding treasures as the *Codex Alexandrianus* of the Greek Bible, the best collection of Greek papyrus from Egypt, and vast collections of original historical manuscripts of incalculable value. In the Departments of Antiquities are some of the most famous historical objects of the world, including the *Elgin Marbles* and the *Rosetta Stone*.

Victoria and Albert Museum, London, whose primary object is to furnish examples to illustrate the history of art, emphasizes architecture and sculpture, ceramics, engraving, book production, paintings, textiles, etc. The library is devoted principally to fine and applied arts.

National Gallery, London, contains a great number of old Masters, including paintings by Da Vinci, Michelangelo, Tintoretto, Mantegna, Titian, Bellini, Jan van Eyck, Rubens, Rembrandt, Holbein, Constable and Turner.

Tate Gallery, Millbank, established as part of the National Gallery, was badly damaged during air raids of World War II.

Wallace Collection, London, bequeathed to the government in 1897 by the widow of Sir Richard Wallace, contains many *objets d'art* and curios of French origin, and first-rank canvases and etchings of Italian, Spanish, Flemish, Dutch and English artists.

Walker Art Gallery, Liverpool, includes many examples of drawings, paintings, sculpture, water colors and etchings dating from the 13th to the 20th centuries.

In France, the most famous gallery is the *Louvre* in Paris, noted for the magnificence of its architecture as well as for its art collection, which is the largest in the world. Other Parisian museums of importance are *Cluny*, *Luxembourg*, *Rodin*, *Guimet*, and *Carnavalet*.

Among the magnificent Italian museums, the *National Museum* at Naples contains the best arranged and best classified collection. The *Uffizi Gallery* in Florence, founded by the Medici, has one of the world's largest and best collections of Italian art. Other galleries in Florence are the *Pitti Palace*, the *Picture Gallery*, the *Academy of Fine Arts* and the *National Museum*. Rome has numerous museums, including several in the Vatican.

In Germany, the *Kaiser Friedrich Museum*, the *Old and New Museums* and the *Schloss Museum* in Berlin, were perhaps the best known.

The *Royal Museum of Fine Arts* in Brussels has a fine collection of French, Flemish and Dutch masters and houses many canvases by Rubens, Van Dyck, Jordaens, Rembrandt, Frans Hals and Jan Steen.

The *Ryks Museum* in Amsterdam contains superb works by Rembrandt, Vermeer and others.

Among the notable art museums in other countries of Europe are the world-famous *Museo del Prado* in Madrid; the *State Tretyakov Gallery* and the *Museum of Fine Arts* in Moscow; and the *Tokyo Imperial Household Museum*, famed for its many Oriental paintings and examples of Oriental workmanship in lacquer, jade, ivory and metal.

Science Museums

The *Ashmolean Museum*, oldest in Great Britain, was built in 1679 by the University of Oxford and houses a collection of natural history objects and archeological rarities.

Science Museum of London has exhibits of scientific instruments and appliances

which review the progress of science and the history of invention.

Other famous London museums of science are the *Hunterian Museum* of the Royal College of Surgeons, devoted to anatomy—human and comparative—and to pathology; and the *Horniman Museum*, which deals with zoology and anthropology (including archeology and ethnology).

The *Liverpool Museums* contain valuable collections of natural history and antiquities and are divided into departments of zoology, botany, geology, archeology and ethnology.

The *Manchester Museum* serves as both a municipal and a university museum. The *Bristol Museum* contains departments of geology, zoology, botany, archeology and Bristol antiquities. The *Natural History Museum* in Hull is but one of the many museums in that city. Others are *Wilberforce House*, a museum of fisheries and shipping, the *Mortimer Collection* of prehistoric antiquities, the *Museum of Commerce and Transport* and the *Folk Lore Museum*.

In Edinburgh, Scotland, are the famed *Royal Scottish Museum*, which has collections in art, ethnography, natural history, technology and geology; and the *National Museum of Antiquities of Scotland*, noted for its coin and manuscript collections. In Glasgow is the *University of Glasgow Museum* with its *Zoological Museum*.

The *Science Museum* in Dublin and the one in Belfast have important science collections.

Calcutta has three noted museums: the *Indian Museum*, outstanding for its marine fauna and vertebrate fossils; the *Geological Museum* and the herbarium of the *Royal Botanical Gardens*. In Bombay are the *Victoria and Albert Museum* and the museum of the *Bombay Natural History Society*.

In Australia are the *Queensland Museum*, Brisbane; the *Geological Survey Museum*, also in Brisbane; the *South Australian Museum*, Adelaide, and the *National Museum of Victoria* in Melbourne.

Zoological Gardens of the World

Far from being a modern idea, the custom of keeping savage beasts in captivity is as ancient as recorded history. In the early part of the 12th century, B.C., the Chinese king Wen had a special zoo where he housed animals captured from all parts of ancient China.

One of the earliest modern zoos, the *Jardin des Plantes* in Paris, was established in 1793. In the following century zoological gardens were established in many of the major cities of the world.

New Zealand contains the *Canterbury Museum*, Christchurch, rich in local fauna, flora and geological items, and a Maori and Polynesian ethnological collection. The *Otago University Museum* of natural history and ethnology, the *War Memorial Museum* in Auckland and the *Colonial Museum* in Wellington are others of note.

In Africa, the *South African Museums*, Capetown, hold general and local history collections and others illustrating anthropology, ethnology and colonial art. The *Durban Museum* contains much anthropological material. In Cairo are the notable Egyptian collections and at Giza the *Geological Survey Museum*.

In Europe, the most important museums are the *Musée d'Histoire Naturelle* in Paris, the famous *Musée d'Océanographie* in Monaco, the *Natural History Museum* in Lisbon, the *Rijks Museum* of geology, mineralogy and zoology in Leyden (Netherlands), the *Royal Museum of Natural History* in Stockholm, the *National Museum* in Copenhagen, the *Museo Civico* in Genoa, the natural science museums in Berne, Geneva, Lausanne and Neuchâtel, the *Geological Survey Museum* in Athens, the *Imperial Natural History Museum* in Vienna, the *Musée Social* in Budapest, the *National Museum of Prague*, the *Imperial Academy of Sciences* and the *Mining Museum* in Leningrad, and the *Rumiantsov Museum* in Moscow.

Famous science museums in Germany prior to World War II were: the *Museum für Naturkunde*, the *Ethnological Museum*, the *Anthropological Museum*, the *Mineralogical Museum* and the *Agricultural Museum*, all in Berlin; the *Natural History and Ethnological Museum* in Hamburg; and the *Deutsches Museum* in Munich.

Non-European museums of note include the *Museum of Antiquities* at Istanbul, the *American University Museum* in Beirut (Lebanon), the museum attached to the *Imperial University* at Tokyo, the *Zi-Ka-Wei Museum* near Shanghai, the *National Museum* in Santiago (Chile), the *Bahia State Museum* in Brazil, and the *Argentine National Museum of Natural History*.

At Giza, outside Cairo, the zoological garden is lodged in a beautiful park maintained by the Egyptian government. Its large collection of animals is chiefly African in origin. Elsewhere in Africa, at Khartoum in the Sudan, at Pretoria and at Johannesburg, fine specimens are found in state-supported zoological gardens.

North America has more than 30 major zoos, in the United States, Canada and Mexico. The *Quebec Zoological Society's* collection is made up of Canadian species;

Toronto has in addition many exotic species.

The first zoological garden in the United States was established in Philadelphia in 1874. Since that time nearly every large city in the country has acquired a zoo. Among the largest are the celebrated *Bronx Zoo* and the *Central Park Zoo* in New York, the *Lincoln Park Zoo* and the *Brookfield Zoo* in Chicago, and those in St. Louis, Detroit, Kansas City and San Diego. The *United States National Zoological Park* in Washington, D.C., in a beautiful setting of hills, woods and streams, was established in 1890 by an act of Congress. Some of the U.S. zoos exhibit their collections in open-air, barless pits; the Brookfield Zoo is an example.

Extensive collections in South America are found at Buenos Aires, and at Concepción and Santiago in Chile. At Belém, Brazil, a zoological-botanical garden is noteworthy for its specimens of Amazonian birds and animals.

In Asia, important collections were established by the governments and by native princes. Largest in India is the zoo at Alipore, Calcutta; other excellent zoos are located at Bombay, Karachi and on private estates. Singapore, Batavia and Surabaya have important collections. Others are found at Fort de Kock on Sumatra's west coast; and at Johore Bahru in British Malaya. Japan abounds in large and small zoos and privately owned aviaries, located in Tokyo, Nagoya, Kyoto, Osaka and Kobe.

Sydney, Melbourne, Adelaide and Perth have large zoological gardens; smaller zoos in Australia are found at Brisbane and Wellington. The Auckland, New Zealand, collection has a representative group of native fauna.

In Europe, zoological gardens have long been popular public institutions. The *Jardin d'Acclimatation*, in the Bois de Boulogne, Paris, was established in 1858,

and a model zoo at Vincennes was added in 1937 for the Paris Exposition.

Germany had about 20 zoological gardens, many of which were developed in the peacetime years between World Wars I and II. Large zoos were located in Berlin and Frankfurt on Main. In Munich, the animals were grouped according to the continent of their origin. Others were established at Dresden, Leipzig and Cologne. At Stellingen, the *Hagenbeck Garden* became an outstanding show place and distributing center for animals. Smaller collections were established at Düsseldorf, Elberfeld and Hanover. Several German zoos, notably that at Berlin, were destroyed during World War II.

The *Schönbrunn* at Vienna is one of the oldest zoos in Europe. The Budapest zoological gardens house a fine collection of European birds. At Antwerp, the *Royal Zoological Society* founded a large menagerie in 1843. It was seriously damaged from German bombs during World War II.

In the British Isles, the outstanding collection is in the garden of the *London Zoological Society* in Regent's Park. Although this zoo received a number of direct bomb hits in 1940-41 and again in 1944, it remained open throughout World War II; visitors during this period numbered 6,500,000. Manchester and Clifton have smaller gardens, and the one at Edinburgh is famous for its collection of penguins. The *Dublin Zoo* is noted for its lions, many of which were born there.

The Amsterdam zoo, with its East Indian collection and its aquarium, and the Rotterdam gardens are the two best known in the Netherlands. Built on a high elevation, the *Skansen Zoo* in Stockholm exhibits north European specimens. The most important gardens in the U.S.S.R. are found in Moscow, where northern as well as exotic species are collected. The zoo at Rome has part of its collection confined in barless pits. At Lisbon there is a small zoological garden, and in Madrid a part of the original royal menagerie.

Famous Structures

(See also Seven Wonders of the World.)

Ancient

The Great Sphinx of Egypt, one of the wonders of ancient Egyptian architecture adjoins the pyramids and has a length of 189 ft. It was built in the 4th dynasty and was used as a temple.

Other Egyptian buildings of note include the *Temples of Karnak* and *Edfu* and the *Tombs at Beni Hassan*.

The Parthenon of Greece, built on the Acropolis in Athens, was the chief temple to the goddess Athena. It was believed to have been completed by 438 B.C. The present temple remained intact until the

5th century A.D. Today, though the Parthenon is in ruins, its majestic proportions are discernible.

Other great structures of ancient Greece were the *Temples at Paestum* (about 540 and 420 B.C.); the *Temple of Poseidon* (about 460 B.C.); the *Temple of Apollo* at Corinth (about 540 B.C.); the *Temple of Apollo* at Bassae (about 450-420 B.C.); the famous *Erechtheum* atop the Acropolis (about 421-405 B.C.); the *Temple of Athena Niké* at Athens (about 426 B.C.); the *Olympieum* at Athens (174 B.C.-A.D. 131); the *Athenian Treasury* at Delphi (about

515 B.C.); the *Propylaea* of the Acropolis at Athens (437-432 B.C.); the *Theater of Dionysus* at Athens (about 350-325 B.C.); the "*House of Cleopatra*" at Delos (138 B.C.) and the *Theater* at Epidauros (about 325 B.C.).

The Colosseum (Flavian Amphitheater) of Rome, the largest and most famous of the Roman amphitheaters, was opened for use A.D. 80. Elliptical in shape, it consisted of three stories and an upper gallery, rebuilt in stone in its present form in the third century A.D. Its seats rise in tiers, one above the other; the tiers in turn are buttressed by concrete vaults and stone piers. It could seat between 40,000 and 50,000 spectators. The Colosseum was principally used for gladiatorial combat.

The Pantheon at Rome, begun by Agrippa in 27 B.C. as a temple, was rebuilt in its present circular form by Hadrian (A.D. 110-25). Literally the Pantheon was intended as a temple of "all the gods." It is remarkable for its perfect preservation today, and it has served continuously for 20 centuries as a place of worship.

Famous Roman arches include the *Arch of Constantine* (about A.D. 315) and the *Arch of Titus* (about A.D. 80).

European

St. Mark's Cathedral in Venice (1063-67), one of the great examples of Byzantine architecture, was begun in the 9th century. Partly destroyed by fire in 976, it was later rebuilt as a Byzantine edifice.

Other famous Byzantine examples of architecture are *St. Sophia* in Constantinople (A.D. 532-37); *San Vitale* in Ravenna (542); *St. Paul's Outside the Walls*, Rome (5th century); the *Kremlin* baptism and marriage church, Moscow (begun in 1397); and *St. Lorenzo Outside the Walls*, Rome, begun in 588.

The Cathedral Group at Pisa (1067-1173), one of the most celebrated groups of structures built in Romanesque style, consists of the cathedral, the cathedral's baptistery, and the *Leaning Tower*. This trio forms a group by itself in the north-west corner of the city. The cathedral and baptistery are built in black and white marble. The campanile (*Leaning Tower*) is 179 ft. high and leans more than 16 feet out of the perpendicular. There is little reason to believe that the architects intended to have the tower lean.

Other examples of Romanesque architecture include the *Vézelay Abbey* in France (1130); the *Church of Notre Dame-du-Port* at Clermont-Ferrand in France (1100); the *Church of San Zeno* (begun in 1138) at Verona, and *Durham Cathedral* in England.

The Alhambra (1248-1354), located in Granada, Spain, is universally esteemed as one of the great masterpieces of Moham-

edan architecture. Designed as a palace and fortress for the Moorish monarchs of Granada, it is surrounded by a heavily fortified wall more than a mile in perimeter. The location of the Alhambra in the Sierra Nevada provides a magnificent setting for this jewel of Moorish Spain.

Notre Dame de Paris (begun in 1163), one of the great examples of Gothic architecture, is a twin-towered church with a steeple over the crossing and immense flying buttresses supporting the masonry at the rear of the church.

Other famed Gothic structures are *Westminster Abbey*, London (begun 1245; damaged in World War II); *Chartres Cathedral* (12th century); *Sainte Chapelle* (1246-48), Paris; *Laon Cathedral*, France (1160-1205); *Rheims Cathedral* (about 1210-50; rebuilt after its almost complete destruction in World War I); *Rouen Cathedral* (13th-16th centuries); *Amiens Cathedral* (1218-69); *Beauvais Cathedral* (begun 1247); *Salisbury Cathedral* (1220-60); *York Minster* or the *Cathedral of St. Peter* (begun in the 7th century); and *Cologne Cathedral* (13th-19th centuries; badly damaged in World War II).

The Duomo (cathedral) in Florence was founded in 1298, completed by Brunelleschi and consecrated in 1436. The oval-shaped dome dominates the entire structure.

Other examples of Renaissance architecture are the *Palazzo Vecchio*, the *Palazzo Pitti* and the *Palazzo Strozzi* in Florence; *St. Peter's* in Rome (begun in 1506 and consecrated in 1626); the *Farnese Palace* in Rome; *Palazzo Grimani* (completed about 1550) in Venice; the *Escorial* (1563-93) near Madrid; the *Town Hall* of Seville (1527-32); the *Louvre*, Paris; the *Chateau* at Blois, France; *St. Paul's Cathedral*, London (1675-1710; badly damaged in World War II); the *Ecole Militaire*, Paris (1752); the *Pazzi Chapel*, Florence, designed by Brunelleschi (1429); the *Palaces of Versailles* and of *Fontainebleau* and the *Chateau de Chambord* in France.

Outstanding European buildings of the 18th and 19th centuries are the *Superga* at Turin, the *Hotel-Dieu* in Lyon, the *Belvedere Palace* at Vienna, the *Royal Palace* of Stockholm, the *Opera House* of Paris (1863-75); the *Bank of England*, the *British Museum*, the *University of London* and the *Houses of Parliament*, all in London; the *Pantheon*, the *Church of the Madeleine*, the *Bourse* and the *Palais de Justice* in Paris.

Oriental

The Taj Mahal (1632-50), at Agra, India, built by Shah Jahan as a tomb for his wife, is considered by some as the most perfect example of the Mogul style and by others as the most beautiful building in the world. Four slim white minarets flank

the building, which is topped by a white dome; the entire structure is of marble.

Other notable examples of Indian architecture are the temples at Benares and Tanjore.

Famed Mohammedan edifices are the *Dome of the Rock* or *Mosque of Omar*, Jerusalem (A.D. 691); the *Citadel* (1166), and the *Tombs of the Mamelukes* (15th century), in Cairo; the *Tomb of Humayun* in Delhi; the *Blue Mosque* (1468) at Tabriz and the *Tamerlane Mausoleum* at Samarkand.

Angkor Vat, outside the city of Angkor Thom, Cambodia, is one of the most beautiful examples of Cambodian or Khmer architecture. The sanctuary was built during the 12th century. Its temple court is protected by a broad moat.

Great Wall of China (228 B.C.?), designed specifically as a defense against nomadic tribes, has numerous large watch towers which could be called buildings. It was erected by Emperor Ch'in Shih Huang Ti and is 1,400 miles long. Built mainly of earth and stone, it varies in height between 18 and 30 feet.

Typical of Chinese architecture are the pagodas or temple towers. Among some

of the better known pagodas are the *Great Pagoda of the Wild Geese* at Sian (founded in 652); *Nan t'a* (11th century) at Fang Shan; the *Pagoda of Sung Yueh Ssu* (A.D. 523) at Sung Shan, Honan.

Other well-known Chinese buildings are the *Drum Tower* (1273), the *Three Great Halls* in the Purple Forbidden City (1627), *Buddha's Perfume Tower* (19th century), the *Porcelain Pagoda* and the *Summer Palace*, all at Peiping.

United States

Rockefeller Center, New York City, completed in 1940, consists of a remarkable group of notable examples of the new skyscraper architecture in America. It is dominated by the 70-story R. C. A. building in the center.

Empire State Building, New York City, the loftiest building in the world, has 102 stories and is 1,250 feet high.

Other famous examples of modern buildings in the United States are the *Chrysler Building* and the *Woolworth Building* in New York City; the *Merchandise Mart*, the *Board of Trade Building* and *Civic Opera Building* in Chicago; and the *Pentagon* in Washington.

Great Dams of the World

Capacity, thousands of acre feet	Name	Location	Maximum height, feet	Date completed

Great Disasters

Earthquakes and Volcanic Eruptions

- A.D. 79** Aug. 24, ITALY: eruption of Mt. Vesuvius buried cities of Pompeii and Herculaneum, killing thousands.
- 1755** Nov. 1, PORTUGAL: one of the most severe of recorded earthquakes leveled Lisbon and was felt as far away as southern France and North Africa; between 10,000 and 20,000 killed in Lisbon alone.
- 1883** Aug. 26-28, NETHERLANDS INDIES: eruption of Krakatoa; violent explosions destroyed two-thirds of island. Sea waves occurred as far away as Cape Horn, and possibly England. Estimated 36,000 dead.
- 1902** May. 8, MARTINIQUE, WEST INDIES: Mt. Pelée erupted and wiped out city of St. Pierre; total deaths estimated at 40,000.
- 1906** April 18, SAN FRANCISCO: earthquake accompanied by fire razed more than 4 sq. mi.; more than 500 dead or missing; property damage about 250-300 millions.
- 1923** Sept. 1, JAPAN: earthquake destroyed third of Tokyo and most of Yokohama; more than 90,000 killed.
- 1935** May 31, INDIA: earthquake at Quetta killed an estimated 50,000.
- 1939** Jan. 24, CHILE: earthquake razed some 50,000 sq. mi.; estimated 30,000 killed, mostly in Concepción and Chillan.
- 1939** Dec. 27, NORTHERN TURKEY: severe quakes in eastern and northern Anatolia destroyed city of Erzingan; about 100,000 casualties.

Tornadoes, Typhoons and Hurricanes

WORLD

- 1864** Oct. 5, INDIA: most of Calcutta denuded by cyclone; 70,000 killed.
- 1876** Oct. 31, INDIA: cyclone and tidal wave swept 3,000 sq. mi. with Bengal worst hit; 215,000 killed.
- 1882** June 6, INDIA: cyclone and tidal wave killed 100,000 in Bombay.
- 1903** Jan. 13, PACIFIC ISLANDS: hurricane killed between 800 and 1,000 in Tuamotu Archipelago.
- 1906** CHINA: typhoon at Hong Kong killed about 10,000.
- 1930** Sept. 3, SANTO DOMINGO (now Ciudad Trujillo): hurricane killed about 2,000 and injured 6,000.
- 1934** Sept. 21, JAPAN: hurricane killed more than 4,000 on Honshu.
- 1935** Oct. 25, HAITI: hurricane and flood ravaged Jérémie and Jacmel districts; 2,000 killed.
- 1942** Oct. 16, INDIA: cyclone devastated Bengal; about 40,000 lives lost.
- 1900** Sept. 8, TEXAS: Galveston struck by hurricane and tidal wave; 5,000 dead and 17 million damage.
- 1925** March 18, MIDWEST: about 800 killed and 13,000 injured in tornado which hit Ill., Ind., Tenn., Ky., and Mo.; 15,000 homeless, 35 towns destroyed.
- 1926** Sept. 18, FLORIDA: hurricane which hit east coast took 373 lives, left 40,000 homeless and caused property damage of 165 million.
- 1928** Sept. 12, FLORIDA: hurricane from Windward Islands killed 4,000.
- 1936** April 2, MISSISSIPPI AND GEORGIA: Tupelo, Miss., and Gainesville, Ga., centers of tornadoes which swept the South, 402 killed; 1,853 injured.
- 1938** Sept. 21, NEW ENGLAND: hurricane killed at least 488 in severest recorded storm of northeastern states.
- 1947** April 9, TEXAS AND OKLAHOMA: tornado killed approximately 150 and injured 1,500.

UNITED STATES

- 1884** Feb. 18, SOUTHERN STATES: tornadoes took about 700 lives.
- 1886** Oct. 12, TEXAS: violent gales caused flood resulting in 250 deaths.
- 1893** Aug. 27, SOUTHEAST COAST: 900 killed.
- 1947** Sept. 17-19, FLORIDA AND GULF COAST: hurricane sweeps through Florida, across the Gulf of Mexico and strikes Louisiana and Mississippi. Approximately 26 million dollar damage, with 37 known dead.

Floods and Tidal Waves

WORLD

- 1228** HOLLAND: 100,000 reputedly drowned by sea flood in Friesland section.
- 1642** CHINA: rebels besieging Kaifeng destroyed seawall, causing flood that drowned 300,000 inhabitants.
- 1887** CHINA: hundreds of thousands of lives reputedly lost in Honan province in overflow of Hwang Ho River.
- 1896** JAPAN: tidal wave following an earthquake at Sanriku killed estimated 27,000.

- 1939 CHINA: floods in north; casualties estimated at ten million homeless, starved or drowned.
- 1946 ALASKA-HAWAII: series of tidal waves in Pacific originating off Alaska killed about 150 in Hawaii.

UNITED STATES

- 1889 PENNSYLVANIA: More than 2,000 died in Johnstown flood.
- 1912 MISSISSIPPI VALLEY: Mississippi River and tributaries overflowed. Property loss, 45 million. 200 killed.

- 1913 OHIO AND INDIANA: floods of Ohio and Indiana rivers took 730 lives and caused 180 million property damage.
- 1927 MISSISSIPPI VALLEY: floods inundated 20,000 sq. mi.; 700,000 homeless.
- 1937 MISSISSIPPI AND TRIBUTARY VALLEYS: floods in the Allegheny, Mississippi and Ohio valleys caused several hundred deaths.
- 1947 MISSISSIPPI RIVER: floods reached highest crest in 104 years—40.2 feet. Damage of 12 million dollars, few lives lost in St. Louis area.

Fires and Explosions

WORLD

- A.D. 64 July 18, ITALY: Rome burned for eight days; most of city destroyed.
- 1666 Sept. 2, ENGLAND: "Great Fire of London" destroyed 13,200 houses, St. Paul's Church, 86 parish churches, etc. Damage 10 million pounds.
- 1812 Sept. 14, RUSSIA: fire started by Russians in Moscow after French occupation; destroyed 30,800 houses.
- 1881 Dec. 8, AUSTRIA: about 850 died in Ring Theater fire in Vienna.
- 1917 Dec. 6, CANADA: approximately 1,500 killed in explosion and fire at Halifax, N.S., when ammunition ship collided with another vessel.
- 1922 ASIA MINOR: more than three-fifths of Smyrna destroyed by fire following Turkish occupation.
- 1944 April 14, INDIA: ship fire that spread to ammunition depot killed at least 128 in Bombay.
- 1947 July 28, NORWAY: nitrate ship explodes outside harbor at Brest, France; 20 killed, 500 injured. 3 to 5 million dollar damage as fire spreads to city.
- 1947 Aug. 18, CADIZ, SPAIN: explosion at naval torpedo and mine factory kills from 300 to 500 persons and demolishes shipyards, factories, etc.
- 1947 Aug. 30, PARIS, FRANCE: fire in the Select Theater in Rueill, suburb, kills 87 persons.

UNITED STATES

- 1835 Dec. 16, NEW YORK CITY: 530 buildings destroyed by fire which spread over 52 acres; 15 million damage.
- 1871 Oct. 8, CHICAGO: the "Chicago Fire," which started in barn, swept 2,124 acres, burned 17,450 buildings, killed 250 persons, and made 98,500 homeless; 196 million damage.
- 1872 Nov. 9, BOSTON: fire leveled 67 acres, destroyed almost 800 buildings; 75 million damage.
- 1937 March 18, NEW LONDON, TEXAS: natural gas explosion destroyed schoolhouse; 413 children and 14 teachers killed.
- 1942 Nov. 28, BOSTON: Cocoanut Grove night club fire killed approximately 500.
- 1944 July 17, PORT CHICAGO, CALIF.: More than 300 killed in explosion of two ammunition ships.
- 1946 June 5, CHICAGO: LaSalle Hotel fire killed at least 60.
- 1946 Dec. 7, ATLANTA: Fire in Winecoff Hotel killed 119.
- 1947 March 25, CENTRALIA, ILL.: Explosion in coal mine killed 111 miners.
- 1947 April 16, TEXAS CITY, TEXAS: Most of city destroyed, 468 known dead following explosion of French vessel *Grandcamp*.
- 1947 July 29, HARRISONBURG, VA.: explosion wrecks beauty shop; 10 killed and 30 injured.

Shipwrecks (not including military or naval action)

WORLD

- 1833 May 11, LADY OF THE LAKE: bound from England to Quebec, struck iceberg; 215 perished.
- 1853 Sept. 29, ANNIE JANE: emigrant vessel off coast of Scotland; 348 passengers and crewmen died.
- 1912 March 5, PRINCIPE DE ASTURIAS: Spanish steamer struck rock off Sebastien Pt.; 500 drowned.

- 1912 April 15, TITANIC: sank after colliding with iceberg; 1,513 died.
- 1914 May 29, EMPRESS OF IRELAND: sank after collision in St. Lawrence River; 1,024 perished.
- 1928 Nov. 12, VESTRIS: British steamer sank in gale off Virginia; 110 died.
- 1931 June 14, French Excursion Steamer overturned in gale off St. Nazaire; approximately 450 died.

- 1939 June 1, Submarine **THETIS**: sank in Liverpool Bay, Eng.; 99 perished.
- 1942 Oct. 2, **QUEEN MARY**: rammed and sank a British cruiser, 338 aboard the cruiser died.
- 1947 July 17, **RAMDAS**: coastal steamer sank off Bombay, India; death toll estimated at more than 550.
- 1947 Sept. 7, two ferries collide near Rio de Janeiro in Guanabara Bay; 30 killed.
- 1947 Sept. 11, **REINA DEL PACIFICO**: British ship explodes in Irish Sea; 18 killed.
- U. S. AND U. S. LINES
- 1865 April 27, **SULTANA**: boiler explosion on Mississippi River steamboat near Memphis; 1,450 killed.
- 1904 June 15, **GENERAL SLOCUM**: excursion

steamer burned in New York Harbor; 1,021 perished.

- 1915 July 24, **EASTLAND**: Great Lakes excursion steamer overturned in Chicago River; 812 died.
- 1934 Sept. 8, **MORRO CASTLE**: about 130 killed in fire off Asbury Park, N. J.
- 1939 May 23, Submarine **SQUALUS**: sank with 59 men off Hampton Beach, N. H.; 33 of the crew were rescued.
- 1943 June 6, Ammunition Ship collided with tanker off Norfolk; 84 died.
- 1945 April 9, U. S. Ship, loaded with aerial bombs, exploded at Bari, Italy; at least 360 killed.
- 1947 Sept. 9, **ISLAND QUEEN**: excursion steamer explodes at Pittsburgh dock; 20 killed.

Aircraft Accidents

WORLD

- 1921 Aug. 24, ENGLAND: **ZR-2**, British dirigible, broke in two on trial trip near Hull; 62 died.
- 1930 Oct. 5, FRANCE: British dirigible, **R-101**, crashed at Beauvais; 47 died.
- 1935 May 18, U.S.S.R.: stunt flier crashed into giant land plane, the *Maxim Gorky*; 49 killed.
- 1938 July 24, COLOMBIA: military plane crashed into grandstand during air review at Bogotá, killing 53.
- 1942 Aug. 25, SCOTLAND: Duke of Kent and all aboard killed in crash of flying boat.
- 1943 Jan. 15, SURINAM (Dutch Guiana): all 35 aboard killed in jungle crash of transport plane near Paramaribo.
- 1943 July 4, GIBRALTAR: Premier Sikorski of Poland and 15 others killed in plane crash.
- 1946 Sept. 18, NEWFOUNDLAND: Belgian airliner crashed near Gander; 26 killed; 18 survivors were evacuated from scene of crash by helicopter.
- 1947 Jan. 26, COPENHAGEN: Royal Dutch airliner crashed at Copenhagen airport; 22 killed, including Grace Moore and Swedish Prince Gustavus Adolphus.
- 1947 Aug. 28, Norwegian Airlines transport crashes near Loedingen, Lofoten Island; kills 35.

U. S. AND U. S. LINES

- 1925 Sept. 3, CALDWELL, OHIO: U. S. dirigible *Shenandoah* broke apart, killing 14.

- 1933 April 4, NEW JERSEY COAST: U. S. dirigible *Akron* crashed into sea; 73 died.
- 1937 May 6, LAKEHURST, N. J.: German zeppelin *Hindenburg* destroyed by fire at tower mooring; 36 aboard died.
- 1940 Aug. 31, LOVETTSVILLE, VA.: airliner crashed; 25, including Sen. Lundeen (Minn.), died.
- 1941 Feb. 27, ATLANTA, GEORGIA: seven killed in crash of airlines; Capt. Eddie Rickenbacker is among survivors.
- 1943 May 3, ICELAND: Lt. Gen. Frank M. Andrews and Bishop Adna W. Leonard among 14 killed in plane crash.
- 1943 July 28, near BOWLING GREEN, KY.: airliner crash killed 20.
- 1944 July 27, SCOTTISH COAST: U. S. hospital transport crashed; 22 died.
- 1946 Oct. 3, NEWFOUNDLAND: U. S. transatlantic airliner crashed near Stephenville; all 39 aboard killed.
- 1947 May 29, NEW YORK CITY: airliner crashed attempting takeoff; 43 died.
- 1947 May 30, BAINBRIDGE, Md.: all 49 passengers and four crew members killed in crash of airliner.
- 1947 June 13, LEESBURG, VA.: Fifty killed in crash of airliner into mountain on West Virginia-Virginia border near Leesburg.
- 1947 June 15, Army B-29 on training flight from Tucson, Ariz., crashes near Springfield, Vt., during storm; 12 killed.
- 1947 June 19, Pan American World Airways Constellation crashes in Syria, near Iraq border; 14 of 36 killed.

AVIATION

THE PAST YEAR

By JOHN FOSTER, JR.

Executive Editor, AVIATION WEEK

FOR aviation, 1947 was a year of swift ups and downs—and no pun intended.

In the military field, research and combat craft pushed speeds up well over 600 mph. trying to find out exactly what happens to pilots and planes when they get up to the speed of sound (760 mph. at sea level). Both Army and Navy set new world speed records. On June 19, Col. Albert Boyd flew a Lockheed P-80R *Shooting Star* over the 3-km. course at Muroc Army Air Base (Calif.) four times at an average of 623.8 mph. Then on Aug. 20, Comdr. Turner F. Caldwell Jr. took the Douglas *Skystreak* over the same course to average 640.7 mph., hitting 653.4 on one trip. Aug. 25, Marine Maj. Marion Carl took the same plane over the same course to boost the record to 650.6 mph.

Military aviation came of age when the armed services merger bill set up the U. S. Air Force as an autonomous unit co-equal with land and sea forces. But it came of age in a sharply declining market. With military production cut 90 percent from the wartime peak, manufacturers were deep in red ink, faced with breakup of vital research and development engineering staffs. An economy-minded Congress went home leaving Air Force and Navy air appropriations of \$1,259,272,000 and \$748,000,000 respectively—enough to get about 800 Army and 630 Navy planes. President Truman's Air Coordinating Committee, in an August report, had declared: "The United States should maintain military power sufficient in size and efficiency to make it unprofitable for another nation to embark upon a campaign of aggression against this country."

Just before the report was filed President Truman had appointed an Air Policy Commission, consisting of Thomas K. Finletter, New York attorney, chairman; George P. Baker, Harvard transportation professor; Arthur D. Whiteside, president of Dun & Bradstreet; E. P. Hoyt, publisher of the *Denver Post*; and Henry Ford II, president of Ford Motor Co.; calling on them for an over-all report on American air policy by the first of this year.

While military plane purchases were scarce, there was plenty of research going on in the guided missiles field—there were contracts all over the country with every-

one from plane makers to food processors working on super hush-hush jobs.

Navy, however, opened up a little when it announced Glenn L. Martin was building a series of super V-2 rockets called "Neptune" designed to get up over a million feet (about 200 miles). Besides being a vehicle for high altitude research, the rockets "may well help to prove the practicability of still higher sounding—or possibly even the practicability of extraterrestrial exploration within the foreseeable future."

Scheduled airlines also found '47 a year of sharp contrasts. A series of accidents early in the year brought crash deaths to 165 in the first 6 months, highest in history, and raised passenger fatalities per 100-million passenger miles to 5.8, compared with 2.3 for the comparable period the year before.

The crashes brought a rash of publicity and probes, most of which boiled down to one conclusion: better safety devices are needed. They highlighted a long-standing battle as to which was the best bad-weather landing aid, GCA (Ground Controlled Approach) the war-born radar system, or CAA's ILS (Instrument Landing System). Probable result will eventually be what most pilots now want—both systems plus anything better that comes along.

Despite the crashes, the airlines carried more passengers than they ever had, even though the rate of increase wasn't as fast as in former years. But all kinds of operating costs went up too, with the result that earnings went down, so far and fast that some lines were brought perilously close to bankruptcy. Part of the strained financial conditions were due to the need for buying new equipment—Douglas DC-4s, the new 350 mph. DC-6s, and new type Lockheed *Constellations* in the four-engine class, and the Martin 2-0-2 and Consolidated *Vultee Convaireliner* in the twin-engine, medium-range class. It was a necessary strain, for it was only by buying new and competitive equipment that the lines could hope to get out of the red.

The year saw a terrific decline in the number of so-called non-scheduled carriers—mostly war veterans who bought planes from surplus and set themselves up in the "fly anything, anyplace, anytime" business

Largely ill-financed, often weak in management, they failed in droves; from more than 5,000 (including those owning a single two-place plane for charter work) in 1946, they had been cut down to less than a dozen really making the grade as air-freight carriers. Biggest of the contract carriers, Slick Airways—headed by 27-year-old Air Force veteran Earl F. Slick—was the first to be certificated by CAB as a common carrier. This certification, on Aug. 1, may be said to mark the birth of the air-freight business in the country.

Also on the up side of the transport business was inauguration of feedline operations—five were certificated over the country and given three years to prove themselves.

The personal plane business was mostly on the down side. Producers of two-place planes—most of which were simply cleaned up prewar designs—found the going rugged, and several went bankrupt; most others cut production schedules to the

bone. Many were the reasons given: some people maintained there weren't enough airports—although the country had about 5,500, compared with 4,268 in mid-1946; others said planes still cost too much to operate and maintain; some said airline crashes were partially responsible.

The highly-touted helicopter was still a long way from replacing the automobile. As people within the industry had always known, there were still a lot of engineering problems to whip; production, operating and maintenance work were still too high to give the public a flying fivver. Nevertheless, two companies—Bell and Sikorsky—were producing for civilian use and their craft were being put to work on such jobs as newspaper reporting, power and pipeline patrol, geologic exploration and crop dusting. CAB gave Los Angeles Airways a certificate for mail routes that cut as much as 24 hours off the time required to get a letter from one part of the sprawling city of the angels to another.

Famous Firsts in Aviation

THOUGH man succeeded in making powered flight only 45 years ago, his dreams of flying go back to mythology.

The principle of jet propulsion, for example, was understood and put into design form some 2,000 years ago by Hero, an Alexandrian philosopher. And as far back as A.D. 1232 Genghis Khan's son, Ogdaï, used rockets as a "secret weapon" in an attack on the Tartar city of Kaifeng. In 1480 Leonardo da Vinci drew sketches for what we now call helicopters. Man's first aeronautical successes came in balloons.

1782—First balloon flight. Jacques and Joseph Montgolfier of Annonay, Fr., sent up a small smoke-filled balloon about mid-November.

1783—First hydrogen-filled balloon flight. Jacques A. C. Charles, Paris physicist, supervised construction by A. J. and M. N. Robert of a 13-ft. diameter balloon which was filled with hydrogen. It got up to about 3,000 ft. and traveled about 16 mi. in a 45-min. flight (Aug. 27).

1783—First human balloon flights. A Frenchman, Jean Pilâtre de Rozier, made the first captive balloon ascension (Oct. 15). With the Marquis d'Arlandes, Pilâtre de Rozier made the first free flight, reaching a peak altitude of about 500 ft., and traveling about 5½ mi. in 20 min. (Nov. 21).

1784—First powered balloon. Gen. Jean Baptiste Marie Meusnier developed the first propeller-driven and elliptically-shaped balloon—the crew cranking three propellers on a common shaft to give the craft a speed of about 3 mi. per hr.

1784—First woman to fly. Mme. Thible, a French opera singer (June 4).

1793—First balloon flight in America. Jean Pierre Blanchard, a French pilot, made it from Philadelphia to near Woodbury, Gloucester Co., N. J., in a little over 45 min. (Jan. 9).

1794—First military use of the balloon. Jean Marie Coutelle, using a balloon built for the French Army, made two 4 hr. observation ascents. The military value of the ascents seems to have been in damage to the enemy's morale.

1797—First parachute jump. André-Jacques Garnerin dropped from about 6,500 ft. over Monceau Park in Paris in a 23-ft. diameter 'chute made of white canvas with a basket attached (Oct. 22).

1843—First air transport company. In London, William S. Henson and John Stringfellow filed articles of incorporation for the Aerial Transit Company (Mar. 24). It failed.

1852—First dirigible. Henri Giffard, a French engineer, flew in a controllable (more or less) steam engine-powered balloon, 144 ft. long and 39 ft. in diameter, inflated with 88,000 cu. ft. of coal gas. It reached 6.7 mi. per hr. on a flight from Paris to Trappe (Sept. 24).

1860—First aerial photographers. Samuel Archer King and William Black made two photos of Boston, which are still in existence.

1872—First gas-engine powered dirigible. Paul Haeuflin, a German engineer, flew in a semi-rigid frame dirigible, powered by a 4-cylinder internal combustion engine running on coal gas drawn from the supporting bag.

1873—First transatlantic attempt. *The New York Daily Graphic* sponsored the at-

- tempt with a 400,000 cu. ft. balloon carrying a lifeboat. A rip in the bag during inflation brought collapse of the balloon and the project.
- 1897—First successful metal dirigible. An all-metal dirigible, designed by David Schwarz, a Hungarian, took off from Berlin's Tempelhof Field and, powered by a 16-hp. Daimler engine, got several miles before leaking gas caused it to crash (Nov. 13).
- 1900—First Zeppelin flight. Germany's Count Ferdinand von Zeppelin flew the first of his long series of rigid-frame airships. It attained a speed of 18 mi. per hr. and got $3\frac{1}{2}$ mi. before its steering gear failed (July 2).
- 1903—First successful heavier-than-air machine flight. Aviation was really born on the sand dunes at Kitty Hawk, N. C., when Orville Wright crawled to his prone position between the wings of the biplane he and his brother Wilbur had built, opened the throttle of their homemade 12-hp. engine and took to the air. He covered 120 ft. in 12 sec. Later that day, in one of four flights, Wilbur stayed up 59 sec. and covered 852 ft. (Dec. 17).
- 1904—First airplane maneuvers. Orville Wright made the first turn with an airplane (Sept. 15); five days later his brother Wilbur made the first complete circle.
- 1905—First airplane flight over half an hour. Orville Wright kept his craft up 33 min. 17 sec. (Oct. 4).
- 1906—First European airplane flight. Alberto Santos-Dumont, a Brazilian, flew a heavier-than-air machine at Bagatelle Field, Paris (Sept. 13).
- 1908—First airplane fatality. Lt. Thomas E. Selfridge, U. S. Army Signal Corps, was in a group of officers evaluating the Wright plane at Fort Myer, Va. He was up about 75 ft. with Orville Wright when the propeller hit a bracing wire and was broken, throwing the plane out of control, killing Selfridge and seriously injuring Wright (Sept. 17).
- 1910—First licensed woman pilot. Baroness Raymonde de la Roche of France, who learned to fly in 1909, received ticket No. 36 on March 8.
- 1910—First flight from shipboard. Eugene Ely took a Curtiss plane off from the deck of cruiser *Birmingham* at Hampton Roads, Va., and flew to Norfolk (Nov. 14). The following January he reversed the process, flying from Camp Selfridge to the deck of the battleship *Pennsylvania* in San Francisco Bay (Jan. 18).
- 1911—First U. S. woman pilot. Harriet Quimby, a magazine writer, who got ticket No. 37.
- 1913—First multi-engined aircraft. Igor Ivan Sikorsky, built and flew the first multi-engine aircraft while still in his native Russia.
- 1914—First aerial combat. Beginning in August, Allied and German pilots and observers started shooting at each other with pistols and rifles—with negligible results.
- 1915—First air raids on England. German Zeppelins started dropping bombs on four English communities (Jan. 19).
- 1918—First U. S. air squadron. The U. S. Army Air Corps made its first independent raids over enemy lines, in DH-4 planes (British-designed) powered with 400-hp. American-designed Liberty engines (Apr. 8).
- 1918—First regular airmail service. Operated for the Post Office Department by the Army, the first regular service was inaugurated with one round trip a day (except Sunday) between Washington, D. C., and New York City (May 15).
- 1919—First transatlantic flight. The NC-4, one of four Curtiss flying boats commanded by Lt. Comdr. Albert C. Read, reached Lisbon, Port. (May 27) after hops from Trepassy Bay, Nfd. to Horta, Azores (May 16-17), to Ponta Delgada (May 20). The Liberty-powered craft was piloted by Walter Hinton.
- 1919—First nonstop transatlantic flight. Capt. John Alcock and Lt. Arthur Whitten Brown, British World War I flyers, made the 1,900 mi. from St. John's, Nfd. to Clifden, Ire., in 16 hr. 12 min. in a Vickers-Vimy bomber powered by two 350-hp. Rolls-Royce engines (June 15-16).
- 1919—First lighter-than-air transatlantic flight. The British dirigible R-34, commanded by Maj. George H. Scott, left Firth of Forth, Scot. (July 2) and touched down at Mineola, L. I., 108 hr. later. The eastbound trip was made in 75 hr. (completed July 13).
- 1919—First scheduled passenger service (using airplanes). Aircraft Travel and Transport inaugurated London-Paris service (Aug. 25). Later the company started the first trans-channel mail service on the same route (Nov. 10).
- 1921—First naval vessel sunk by aircraft. Two battleships being scrapped by treaty were sunk by bombs dropped from Army planes in demonstration put on by Brig. Gen. William S. Mitchell (July 21).
- 1921—First helium balloon. The C-7, non-rigid Navy dirigible was first to use non-inflammable helium as lifting gas, making a flight from Hampton Roads, Va., to Washington, D. C. (Dec. 1).
- 1922—First member of Caterpillar Club. Lt. (later Maj. Gen.) Harold Harris bailed out of a crippled plane he was testing at McCook Field, Dayton, Ohio (Oct. 20), and became the first man to

- join the Caterpillar Club—those whose lives have been saved by parachute.
- 1923—First nonstop transcontinental flight. Lts. John A. Macready and Oakley Kelly flew a single-engine Fokker T-2 nonstop from New York to San Diego, a distance of just over 2,500 mi. in 26 hr. 50 min. (May 2-3).
- 1923—First autogyro flights. Juan de la Cierva, brilliant Spanish mathematician, made the first successful flight in a rotary wing aircraft in Madrid (June 9).
- 1924—First round-the-world flight. Four Douglas Cruiser biplanes of the U. S. Army Air Corps took off from Seattle under command of Lt. Lowell Smith (Apr. 6). 175 days later two of the planes (Lt. Smith's and Lt. Erik Nelson's) landed in Seattle after a circuitous route—one source saying 26,345 mi., another saying 27,553 mi.
- 1926—First polar flight. Then-Lt. Cmdr. Richard E. Byrd, acting as navigator, and Floyd Bennett as pilot, flew a trimotor Fokker from Kings Bay, Spitsbergen, over the North Pole and back in 15½-hr. flight (May 8-9).
- 1927—First solo transatlantic flight. Charles Augustus Lindbergh lifted his Wright-powered Ryan monoplane, *Spirit of St. Louis*, from Roosevelt Field, L. I., to stay aloft 33 hr. 39 min. and cover 3,600 mi. to Le Bourget Field outside Paris (May 20-21).
- 1927—First transatlantic passenger. Charles A. Levine was piloted by Clarence D. Chamberlin from Roosevelt Field, L. I., to Eisleben, Ger., in a Wright-powered Bellanca (June 4-5).
- 1928—First east-west transatlantic crossing. Baron Guenther von Huenefeld, piloted by German Capt. Hermann Koehl and Irish Capt. James Fitzmaurice, left Dublin for New York City (Apr. 12) in a single-engine all-metal Junkers monoplane. Some 37 hr. later they cracked up on Greenly Island, Labrador. They were rescued.
- 1928—First U. S.-Australia flight. Sir Charles Kingsford-Smith and Capt. Charles T. P. Ulm, Australians, and two American navigators, Harry W. Lyon and James Warner, crossed the Pacific from Oakland to Brisbane. They went via Hawaii and the Fiji Islands in a trimotor Fokker (May 31-June 8).
- 1928—First trans-Arctic flight. Sir Hubert Wilkins, Australian explorer, piloted by Carl Ben Eielson, flew from Point Barrow, Alaska, to Spitsbergen (mid-April).
- 1929—First of the endurance records. With Air Corps Maj. Carl Spaatz in command and Capt. Ira Eaker as chief pilot, an Army Fokker, aided by refueling in the air, remained aloft 150 hr. 40 min. at Los Angeles (Jan. 1-7).
- 1929—First blind flight. James H. Doolittle proved the feasibility of instrument flying when he took off and landed entirely on instruments (Sept. 24).
- 1929—First rocket engine flight. Fritz von Opel, German auto maker, stayed aloft in his small rocket-powered craft for 75 sec., covering nearly 2 mi. (Sept. 30).
- 1929—First South Pole flight. Comdr. Richard E. Byrd, with Bernt Balchen as pilot, Harold I. June, radio operator, and Capt. A. C. McKinley, photographer, flew a trimotor Fokker from the Bay of Whales, Little America, over the South Pole and back (Nov. 28-29).
- 1930—First Paris-New York nonstop flight. Dieudonné Coste and Maurice Bellonte, French pilots, flew a Hispano-powered Breguet biplane from Le Bourget Field to Valley Stream, L. I., in 37 hr. 18 min. (Sept. 2-3).
- 1931—First flight into the stratosphere. Prof. Auguste Piccard, Swiss physicist, and Charles Knipfer, ascended in a balloon from Augsburg, Ger., and reached a height of 51,793 ft. in a 17-hr. flight that terminated on a glacier near Innsbruck, Aus. (May 27).
- 1931—First nonstop transpacific flight. Hugh Herndon and Clyde Pangborn took off from Sabishiro Beach, Japan, dropped their landing gear and flew 4,860 mi. to near Wenatchee, Wash., in 41 hr. 13 min. (Oct. 4-5).
- 1932—First woman's transatlantic solo. Amelia Earhart, flying a Pratt & Whitney Wasp-powered Lockheed Vega, flew alone from Harbor Grace, Nfld., to Ireland in approximately 15 hr. (May 20-21).
- 1932—First westbound transatlantic solo. James A. Mollison, British pilot, took a de Havilland Puss Moth from Portmarnock, Ire., to Pennfield, N. B. (Aug. 18).
- 1932—First woman airline pilot. Ruth Rowland Nichols, first woman to hold three international records at the same time—speed, distance and altitude—was employed by the New York-New England Airways.
- 1933—First round-the-world solo. Wiley Post took a Lockheed Vega, *Winnie Mae*, 15,596 mi. around the world in 7 days 18 hr. 49½ min. (July 15-22).
- 1937—First successful helicopter. Hanna Reitsch, German woman pilot, flew Dr. Heinrich Focke's FW-61 in free, fully-controlled flight at Bremen (July 4).
- 1939—First turbojet flight. Just before their invasion of Poland, the Germans flew a Heinkel He-178 plane powered by a Heinkel S3B turbojet (Aug. 27).
- 1942—First American jet plane flight. Robert Stanley, then chief pilot for Bell Aircraft Corp., went aloft in the Bell XP-59 *Airacomet* at Muroc Army Base (Oct. 1).

How U. S. Aviation Is Governed

U. S. aviation comes under two bodies—Civil Aeronautics Administration (CAA) and Civil Aeronautics Board (CAB).

The Board consists of five men appointed by the President, subject to Senate approval, and operates as an independent agency. It is concerned mainly with economic and safety regulations and investigation of civil aircraft accidents.

The Administration, a branch of the Department of Commerce, is primarily an operating agency having seven main services:

Office of Federal Airways—builds and operates civil airways, controls traffic, and operates communications, weather reporting stations and other air navigation aids.

Office of Airports—advises on and develops airport design and construction.

Office of Safety Regulation—enforces

regulations in certification of planes, pilots, mechanics and agencies. It works closely with CAB's Safety Board, referring violations to the Board and administering regulations passed by the Board.

Office of Aviation Information—handles publicity and statistics, publishes monthly CAA Journal and CAB news.

Office of Aviation Training—furnishes technical information to schools offering air education and conducts the Inter-American Aviation Training Program.

Office of Field Operations—coordinates CAA activities abroad and handles liaison work on international conferences and foreign missions.

Office of Business Management—handles budget, accounts, personnel, contract and other "housekeeping" jobs.

Domestic and Territorial Air Carrier Operations, 1937-46

John Joseph Montgomery, a Santa Clara (Calif.) college professor, claimed the first U. S. glider flight in 1883 with a glide of 100 feet in a machine built by himself and his brother, although Captain Le Bres, a French sailor, is credited with carrying out the first significant glider work in the 1870's.

Solomon Auguste Andree, Nils Strindberg and Knut Frankel made the first polar attempt in 1897, taking off from Virgo Bay, Spitzbergen, in a free balloon, heading for the North Pole 600 miles distant. Andree's body was found in 1930 on White Island not far from Spitzbergen.

The Atlantic has been crossed well over 100,000 times since Lindbergh made the first solo crossing in 1927. Airlines were making more than 150 crossings a week in the summer of 1947.

An American, Dr. John Jeffries, might claim to have been the first paying air passenger. In 1785 Dr. Jeffries did more than pay his fare in a balloon flight between Dover, England, and the Guignes forest near Calais, France—he also worked. Twice it was necessary to heave things

overboard to stay aloft. But another "first" was established—this balloon also carried the first letters by air.

Twenty years ago, the cost of designing and building a military airplane was about \$20,000; today it costs between 7 and 10 million dollars.

Federal Air Power Policy

After World War I America's aircraft industry nearly went bankrupt because the country had no air power policy. It was not until 1925, when the Morrow Board made its deep study and recommendations, that legislation was forthcoming to bring a semblance of stability to the industry.

After World War II it seemed history would repeat itself—but on a larger scale. However, about mid-1947 not one, but two, groups were set up to make extensive investigations aimed at finding out just what the nation should do with the airplane as a weapon of war or instrument of peace.

One was the President's Air Policy Commission (see Review); the other was a Congressional Joint Air Policy Committee.

This latter group bids fair to become a permanent congressional organization. As set up by the 80th Congress it was chairmanned by Sen. Owen Brewster with Rep. Carl Hinshaw as vice-chairman. Members included Sens. Albert Hawkes, Homer Capehart, Edwin Johnson and Ernest McFarland, and Reps. Charles Wolverton, Karl Stefan, Alfred Bulwinkle, and Paul Kilday.

Though the Congressional Committee was expected to make use of the President's Commission findings, it was the one looked to for policy-making recommendations which would lead to legislation that will determine whether the U. S. would keep the position gained during World War II as the dominant air power nation.

A Few Current Aviation Terms

Athodyd—a form of ramjet, the term coming from Aero-Thermo-Dynamic Duct.

Axial flow compressor—one that compresses air in a flow parallel to the axis of rotation through a series (or multiple stages) of compressor blades.

Centrifugal compressor—one that compresses air in a direction tangential to the rotating member (or impeller), sometimes likened to a cream separator set on its side.

Critical speed—that at which compressibility effects begin to be encountered. Most propeller-driven aircraft don't reach critical speed in level flight (because of lack of power) but can hit it in dives. Many jet-propelled planes, however, can reach it in level flight so that air speed indicators have the critical speed marked by a red line to warn the pilot.

Supersonic speed—that which is faster than the speed of sound.

Transonic Range—a little-known "belt" between about 600 and 900 miles an hour—around Mach number .7 to 1.2—where compressibility begins to be serious. Since it's tied up with Mach numbers, the exact speed at which it begins will depend on the individual airplane, altitude and temperature conditions.

Turbojet—a thermal jet engine in which air is compressed (by a centrifugal or axial flow compressor or combination of both), heated by combustion of fuel at about compressor pressure, released through a turbine which drives the compressor and then is exhausted at high velocity through the exhaust nozzle (also called the tail pipe or tail cone).

CALENDAR AND ASTRONOMY

Edited by

CLYDE FISHER, Ph.D., LL.D., Honorary Curator, Hayden Planetarium

Associate Editor

HUGH S. RICE, A.M., Research Associate, Hayden Planetarium

Kinds of Time

Of the three main kinds of time (sidereal, apparent solar, and mean solar), the two kinds used in our calendar pages (local civil and standard time) are both types of mean solar time.

Sidereal time is used mostly in astronomy. It is nearly but not exactly star-time, and is measured by the diurnal rotation of the vernal equinox point in the sky. Sidereal days are shorter than solar days by about $3^m 56^s$ of mean time.

Apparent solar time is measured by the apparent diurnal rotation of the sun, and is the hour-angle of the sun $+12^h$. When the sun is at lower transit we have 0^h by apparent time; when it is on the upper meridian the apparent time is 12^h . The sun is not a good timekeeper, its eastward motion along the ecliptic being irregular, so apparent days are of unequal duration.

Mean solar time is the hour-angle of the "mean sun" $+12^h$. The mean sun is an imaginary body moving uniformly along the celestial equator. When the mean sun is on the lower meridian, the mean time is 0^h . The actual sun is sometimes ahead of and sometimes behind the mean sun, and the difference at any moment is the *equation of time*. When the sun is west of the mean sun, we have the "sun fast" situation, and the sun crosses the meridian before the mean sun; when the sun is east of the mean sun, we have the "sun slow" condition, and the sun transits after the mean sun. The equation of time helps in conversion of apparent and mean solar time. No clock runs on apparent time but ordinary clocks keep mean solar time in some form.

Local civil time (L.C.T.) is the mean solar time of a designated meridian, and its day begins with the mean sun at lower transit. This is midnight, the moment of *zero hour* (0^h). Ordinary clocks are not

set to local civil time, because this time—at any instant—varies with any change of longitude.

Standard time is the local civil time of a standard meridian, but used over an entire time-zone. In the U. S. the four zones (Eastern, Central, Mountain, and Pacific) are based upon the standard meridians of 75° , 90° , 105° , and 120° respectively. Ordinary clocks run on standard time, a type of mean solar time. In the summer, in certain localities, they run on advanced time (as daylight saving time) but this is only a clock-setting, and is actually standard time. Daylight saving time for a certain zone is the normal standard time of one zone to the east. While popular in certain metropolitan areas, it is not used for scientific observations. Advanced time is 1^h later on the clock-face than the normal standard time of the same zone.

Time zones. The time-zone chart of the world [inside back cover] shows how the world is divided into 24 time zones according to longitude. In a large proportion of countries, standard time is in use, and commonly the time on the clock-face reads 1 hour later for each zone east of a given zone, and 1 hour earlier for each zone west of a given zone. The zero zone [see bottom of chart] runs thru Greenwich, Eng., and the zones are so marked that the standard time at a particular station, added algebraically to the zone-number at the bottom gives the corresponding universal time or Greenwich civil time. For example, 3 a.m., M.S.T. $+7^h = 10^h$ U.T. or G.C.T.

Mexico, except for the northern part of Lower California, uses 90th-meridian time entirely. Canada uses the 4 standard-time zones of the U.S., and two others: (1) 60th-meridian or Atlantic standard time, for New Brunswick, Nova Scotia, and Quebec (east of 68° w.), 4^h earlier than Greenwich,

and (2) 135th-meridian or Yukon standard time, 9^h earlier than Greenwich. Newfoundland and the Labrador coast use Newfoundland standard time, 3^h 30^m earlier than Greenwich. Alaska uses 4 time-zones, those based on the following meridians of west longitude: 120° (Juneau), 135° or Yukon standard time (Yakutat), 150° or Alaska standard time (Fairbanks), and 165° (Nome).

The Date-line. At any moment of time, usually there are parts of two different but contiguous days going on at different places on the earth. The change of date is made at the date-line, an imaginary line that follows essentially the course of the 180° meridian in the Pacific Ocean. At points east of the date-line the calendar day is 1

day earlier than at places to the west of the line. At a point just west of the date-line, let us suppose it is 18^h or 6 p.m., L.C.T., on Aug. 1. At the same moment it is 12^h at long. 90° e., 6^h at long. 0°, and 0^h at long. 90° w., all of the same date, Aug. 1. West of long. 90° w., it is not yet 0^h (midnight); hence between 90° w. and 180° the date must be July 31. As one crosses the date-line going eastward his watch remains the same but the date changes abruptly to 1 day earlier, so the traveler repeats part of a calendar day. As one crosses the line going westward the date changes abruptly to one day later, causing him to omit a calendar day. (According to actual practice, the change is made at night regardless of the true moment of crossing.)

On Using the Following Calendar Pages

Sun fast and sun slow. This is the *equation of time*, as previously discussed.

Sunrise and sunset. For accurate results, two corrections to the tabular values are necessary: (1) interpolation for latitude, and (2) reduction to standard time. When the observer is at a latitude between two given latitudes, he computes a time for sunrise or sunset that lies between the times shown for the given latitudes. (Our table of longitudes and latitudes is a guide for one's position, but a large atlas may be consulted.) For example, on Jan. 16 the sun sets at 4:59 at lat. 40° and at 4:44 at lat. 45°, the difference being -15^m. An observer at Oshkosh, Wis. (lat. 44° 0') would be about $\frac{4}{5}$ the distance between 40° and 45°. ($\frac{4}{5}$) (-15^m) = -12^m; hence at Oshkosh sunset occurs at 4:59 - 12^m = 4:47 p.m., L.C.T. [New York City is essentially $\frac{1}{5}$ the distance between 40° and 45°, Boston about 9/20, and Cleveland 3/10 of the way, etc.]

In the sun and moon tables, the data has to be given in LOCAL CIVIL TIME. This is *not* standard time, but has to be reduced to standard time.

To reduce local civil time to standard time, decrease the L.C.T. by 4^m for every degree the station is east of the standard meridian, or increase the L.C.T. by 4^m for every degree the station is west of the standard meridian.

Moonrise and moonset. For accurate results at any station in the U. S., three corrections are needed: (1) interpolation for latitude, (2) correction for longitudes west of 82½°, and (3) reduction to standard time.

(1) Interpolation for latitude follows the same method as for the sun.

(2) Use of the *a-factor*. The moon tables are exact for the given latitudes and for longitude 75° w. The *a-factor* adapts them to any longitude in the U. S. For observers in the eastern states and as far west

as long. 82½° [Port Huron, Mich., Mansfield, Ohio, Huntington, W. Va., Asheville, N. C., Tampa, Fla.], no *a-factor* is used. For stations in the 90° zone, between 82½° and 97½°, use the *a-factor* in the column "90°". The "*a-factor*, moonrise" is always to be added to the time of moonrise as derived from the main tables, and the "*a-factor*, moonset" is added to the time of moonset as derived. The boundary at 97½°, between the 90° and the 105° zones, runs through Grafton, N. Dak., Webster, S. Dak., Norfolk, Nebr., Salina, Kans., Oklahoma City, Okla., Fort Worth and Corpus Christi, Tex. Observers in the 105° zone, between 97½° and 112½° long., will use the "105°" *a-factor*, and those west of 112½° will use the "120°" *a-factor*, the eastern boundary (112½°) of the 120° zone going through Butte, Mont., Pocatello, Idaho, Panguitch, Utah, and Prescott, Ariz. These zones do *not* correspond to the irregular divisions of the standard-time belts.

(3) Change L.C.T. to standard time.

Example: find moonset on Aug. 1, 1948, at Long Beach, Calif. (long. 118° 11' w., lat. 33° 47' n.) (a) Moonset for 30° is 3:58 p.m., for 35°, 4:14 p.m.; difference is 16^m. Long Beach is $\frac{3}{4}$ the distance from 30° to 35°; hence ($\frac{3}{4}$) (16^m) = 12^m; and 3:58 + 12^m = 4:10 p.m. (b) Add *a-factor*, moonset, for the 120° region: 4:10 + 8^m = 4:18 p.m., L.C.T. (c) Reduce to standard time: 120° - 118.2 = 1.8; hence Long Beach is 1.8 e. of the standard meridian; 1.8(4^m) = 7.2; 4:18 - 7^m = 4:11 p.m., P.S.T.

Moon's transit. This data indicates the local civil time of the moon crossing the observer's meridian. The time is the same for all latitudes. It is nearly correct for all longitudes in the U. S.; for more exact work use—for every day—a mean *a-factor* of 2^m, 4^m, 6^m. That is, for the 75° zone, use no correction; for the 90° zone add 2^m to the time in the tables; for the 105° zone add 4^m; for the 120° zone add 6^m. Afterward, reduce the L.C.T. to standard time.

Longitude, Latitude, Magnetic Declination of U. S. and Canadian Cities

The last column shows, in degrees, the magnetic declination, which is the angle that the magnetic meridian makes with the true, or geographic, meridian. When the value in degrees is marked w, the north end of the compass needle points west of true north by that number of degrees; when the value is e, the north end of the needle points east of true north by that many degrees.

*The Leap-Year World Holiday, W or June 31 (an extra day), follows June 30 in leap years only.

†The Year-End World Holiday, W or December 31 (365th day), follows December 30 every year.

Exposition

The perpetual World Calendar divides the year into equal quarters of 91 days, or thirteen weeks, or three months, or approximately one season. The first month in each quarter contains 31 days. The other two months have 30 days each, every month having twenty-six weekdays plus Sundays. Every quarter with its monthly arrangement of 31-30-30 days begins on a Sunday, the first day of the week, and ends on a Saturday, the seventh day of the week, which is easy for business, accountants and educators because the closing

day of every quarter does not fall on a Sunday. Every year begins logically on the accepted first day of the week, a Sunday, January 1. This plan retains the customary arrangement of weekdays.

The 364-day year is not complete however. The 365th day of the year, essential in keeping the calendar in step with the seasons, is the logical Year-End World Holiday, dated W or December 31, that follows Saturday, December 30, every year. By giving the 365th day, the Year-End World Holiday, a name and date, a blank

date is avoided. This World Holiday is an integral part of the year; it belongs to and completes the calendar.

The extra day in leap years is the Leap-Year World Holiday, dated W or June 31, and follows Saturday, June 30. By placing these two stabilizing days, the Leap-Year World Holiday in leap years at the end of the second quarter and the Year-End World Holiday every year at the end of the fourth

quarter, the calendar in leap years becomes balanced, each half-year having 183 days. The calendar is thus a stable, balanced, well-coordinated time system, comparable from year to year.

Fourteen nations have already approved the World Calendar, including Afghanistan, Brazil, Chile, China, Estonia, Greece, Hungary, Mexico, Norway, Panamá, Peru, Spain, Turkey and Uruguay.

HOW TO USE THE CALENDAR

To find the day of the week of any date:

1. Locate the day of the month in the section of the table directly above.
2. Follow directly across the page to the letter of the alphabet below the month. Remember that letter.
3. Locate the year in the bottom section of the table.
4. Follow directly up the page to the same letter of the alphabet.
5. Follow directly right across the page. The day in the extreme right column is the day of the week upon which the date in question fell.

Example: Find the day of the week of July 4, 1948. Opposite 4 and below July is the letter F. In the 1948 column, the letter F is opposite Sunday. Hence, July 4, 1948, is a Sunday.

By reversing the above process, the date for any particular weekday of a month can be found.

Example: Find the second Tuesday of March, 1948. Opposite Tuesday under March is the letter D. Opposite D in the 1948 column are the days of the month 2, 9, 16, 23 and 30, which represent all the Tuesdays of March, 1948. Hence, the second Tuesday is the 9th.

*In leap-years, use the Jan. and Feb. in italics, but do not use them for common years.

ASTRONOMICAL DATA

The Sun

There are countless millions of far distant, superheated, self-luminous gaseous bodies called stars and each one is in itself a sun. Our Sun—the star around which our whole solar system revolves—is at a mean distance of 93,003,000 miles from the earth, has a diameter of 865,380 miles, a surface temperature of about 11,000° F. and an interior temperature estimated at millions of degrees. It has a surface area approximately 12,000 times that of the earth and in volume or bulk it is about 1,306,000 times the size of the Earth. It is, nevertheless, a star of only average size and temperature.

The Sun rotates on its axis and, by observation of Sun-spots (great whirling storms in the Sun's atmosphere) and faculae (bright streaks or areas on the Sun's surface), astronomers have discovered that the rotational speed varies from approximately 26½ days at its equator to approximately 34 days near its poles. The Sun is just one star of the great Milky Way Galaxy that is rotating on its galactic axis at a rate that gives the Sun a galactic

traveling speed of 175 miles per second. Furthermore, the Sun is moving toward a point known as "the apex of the Sun's way" in the constellation Hercules at a speed of about 12 miles per second.

What we see when we look at the Sun is the glowing surface called the Photosphere. Extending above this surface is the Sun's atmosphere consisting of two layers, one extending outward for a few hundred miles from the Sun's surface and called the Reversing Layer for spectroscopic reasons, the other an outer layer extending several thousand miles and called the Chromosphere because of its reddish color due mostly to superheated hydrogen, helium and calcium. Solar "prominences" occasionally burst out from this layer and extend hundreds of thousands of miles above the Sun's surface. Beyond these layers of solar atmosphere and extending to great height is the outermost observable solar feature, the magnificent Corona of exceedingly slight density that provides an awesome spectacle for observers during total eclipses of the Sun.

Morning and Evening Stars for 1948

MERCURY

Morning star, Jan. 1 to Jan. 3
Evening star, Jan. 3 to Feb. 19
Morning star, Feb. 19 to Apr. 29
Evening star, Apr. 29 to June 23
Morning star, June 23 to Aug. 11
Evening star, Aug. 11 to Oct. 19
Morning star, Oct. 19 to Dec. 12
Evening star, Dec. 12 to Dec. 31

VENUS

Evening star, Jan. 1 to June 24
Morning star, June 24 to Dec. 31

Mercury may be seen over the eastern horizon before sunrise for about 10 days before and after each western elongation, and similarly over the western horizon after sunset around each eastern elongation. (For elongation times, see Phenomena section.) At the Feb. and Mar. elongations Mercury is in Aquarius, near Capricornus; at the May elongation, it is at the Taurus-Gemini border; at the July elongation, at the Orion-Gemini border; at the Sept. elongation, in southern Virgo, s.e. of Spica; at the Nov. elongation, in Virgo, n.e. of Spica.

Venus is visible in the east for many weeks around western elongation, and similarly in the west around eastern elongation. The following are the general locations of Venus this year: Jan., in Capricornus and Aquarius; Feb., in Pisces; Mar.,

MARS

Morning star, Jan. 1 to Feb. 17
Evening star, Feb. 17 to Dec. 31

JUPITER

Morning star, Jan. 1 to June 15
Evening star, June 15 to Dec. 31

SATURN

Morning star, Jan. 1 to Feb. 8
Evening star, Feb. 8 to Aug. 19
Morning star, Aug. 19 to Dec. 31

in Aries; Apr., in Taurus; May, in Taurus and Gemini; June, in Gemini; July, in Orion and Taurus; Aug., in Orion and Gemini; Sept., in Cancer; Oct., in Leo; Nov., in Virgo; Dec., in Libra and Ophiuchus.

Mars is in Leo Jan. to June; in Virgo July to mid-Sept.; in Libra mid-Sept. to mid-Oct.; in Scorpius mid-Oct. to end of month; in Ophiuchus in Nov.; and in Sagittarius in Dec.

Jupiter is in Ophiuchus Jan. and Feb.; in Sagittarius Mar. to May; in Ophiuchus June to Oct.; and in Sagittarius Nov. and Dec.

Saturn is in w. Leo Jan. and Feb.; in Cancer Mar. to May; and in Leo June to Dec.

Comets

In ancient times comets were supposed to be omens of sudden death, war, revolution or other dire events in human affairs and practically nothing was known of their true nature. They still offer puzzling problems to modern astronomers and, with about 1000 listed, new ones are being discovered and charted each year. In general, comets consist of a nucleus (sometimes lacking) surrounded by a head or "coma" (from the Greek word for hair because of its hazy appearance) from which extends the great tail that makes the passage of a comet through our skies such a striking spectacle. Comets come in varying sizes but the average diameter of the heads of a large number of observed comets is about

80,000 miles and the tail length may stretch out to more than 100,000,000 miles. The density of comets is so low, however, that we can see the stars through them and there is more actual material in one cubic inch of ordinary air than in 2000 cubic miles of the tail of a comet.

The luminous tails of comets were believed, for many centuries, to be merely clouds high in our atmosphere. Tycho Brahe, eccentric Danish astronomer, proved that the comet he observed in 1577 was a celestial object far beyond the limit of the Earth's atmosphere. But the great forward step in the study of comets came when Edmund Halley, who became England's Astronomer Royal, carefully observed a

comet in 1682, checked with previous observations, calculated its orbit and predicted its return to our skies in 1758 or 1759. Halley died in 1742 but the comet, now named after him, reappeared on schedule and a search through ancient records indicated that it had been observed in repeated appearances as far back as 240 B. C. Its last appearance was marked by its perihelion passage in 1910 and its next visit to our skies will occur in 1986. Halley's fulfilled prediction was the first definite proof that comets have regular orbits and time schedules or are, as the astronomers say, "periodic". The known "periods" (time intervals between appearances) of comets vary from the 3.3 years of Encke's Comet to thousands of years for wider travelers. No known bright comets are scheduled for appearance in our sky this year.

A curious thing about comets is that their tails always trail from the head in a direction away from the Sun, so that when a comet is moving away from the Sun, the tail stretches out in front of the head. A comet's tail is so tenuous as to be almost a vacuum. The Earth passed through the tail of Halley's Comet in May, 1910, and on that occasion astronomers heard nothing,

felt nothing and saw nothing to indicate that such passage had any observable effect on the Earth.

Twenty Famous Comets

Year and no.	Name of comet	Period years
1744	De Chéseaux's Comet.....
1806	Biela's Comet.....	6.7
1811 I	Great Comet of 1811.....	3000
1812	Di Vico's Comet.....	70.7
1815	Olbers' Comet.....	74.0
1819 I	Encke's Comet.....	3.3
1819	Pons-Winnecke Comet.....	6.0
1835 III	Halley's Comet.....	76.3
1843 I	Great Comet of 1843.....	512.4
1844 II	Great Comet of 1844.....	102,050
1858 VI	Donati's Comet.....	2,040 (?)
1864 II	Great Comet of 1864.....	2,800,000
1871 III	Tuttle's Comet.....	13.8
1874 III	Coggia's Comet.....	6,000 (?)
1879	Brorsen's Comet.....	5.6
1881 II	Tebbutt's Comet.....
1889 VI	Swift's 2nd Comet.....	7.0
1892 III	Holmes' Comet.....	6.9
1923	d'Arrest's Comet.....	6.6
1925 II	Comet Schwassmann-Wachmann..	16.2

The Polar Auroras

It has been definitely established that Sun-spots are the direct cause of the greatest electrical show on Earth, a double feature, the Aurora Borealis (Northern Lights) and the Aurora Australis (Southern Lights). Sun-spots are magnetic storms of vast dimensions on the surface of the Sun and they shoot out electrified particles into space. Those that come toward the Earth are drawn toward the Earth's magnetic poles and consequently these magnetic poles are the radiating centers of those spectacular electromagnetic displays in the sky that we commonly call the "Northern Lights" or the "Southern Lights", depending upon whether we see them in the northern or southern hemisphere. The electrical particles from the Sun-spots strike the upper regions of our atmosphere where the component gases (nitrogen, oxygen and extremely minor amounts of argon, helium, neon, hydrogen and carbon dioxide) are very much rarefied and cause them to vibrate and glow in colors characteristic of the various elements, just as a neon sign glows when an electric charge is passed through it. The Sun-spots that cause auroral displays also cause the magnetic storms that interfere with radio

reception, telephone, telegraph and cable traffic and other electromagnetic devices such as compasses and various aviation accessories.

There is an almost infinite variety to the auroral display. The lights may sweep across the sky in waves, in streamers or in folds like draped curtains. Or it may be a stationary glow. Sometimes there is little or no color in these waves, sheets or streamers of light. At other times the lights may be rich in red or green or pastel shades. Rose color and lavender and violet and purple are common. Blue is rare but has been seen. The "Northern Lights" have been seen as far south as New Orleans and the Florida peninsula and the "Southern Lights" have been seen as far north as New Zealand and Australia, but the maximum occurrence of these auroral displays is along the borders of the Arctic and Antarctic regions. Since these are atmospheric displays, our atmosphere must extend to the extreme height at which auroral lights are observed. Prof. Carl Störmer of the University of Oslo found this to be about 600 miles. He further found that no auroral lights came closer to the Earth's surface than 50 or 60 miles.

The Change of Seasons

It is enough to state that the Earth is nearer to the Sun in January than it is in July to convince those who live in the northern hemisphere that there must be some other explanation than that for the

seasonal changes on our globe. The reason for the change in seasons is that the axis of rotation of the Earth is tipped to the perpendicular of the plane of its orbit around the sun at an angle of approxi-

mately $23\frac{1}{2}$ degrees (more accurately, it varies in 1948 from $23^{\circ} 26' 51''$ to $23^{\circ} 26' 53''$) and consequently there is a proportional shifting of the angle of the Sun's rays falling on different portions of the Earth's surface at different times of year.

On or about June 21 the north end of the Earth's axis is tipped to its limit toward the Sun. In the northern hemisphere this is our Summer Solstice. We then have our longest days and receive a maximum of heat and light from the Sun whose perpendicular rays are falling on the Tropic of Cancer, $23\frac{1}{2}$ degrees north of the Equator. Six months later, on or about Dec. 21, the Earth has reached a position in its orbit that finds the north end of its axis tipped at its maximum away from the Sun. This is our Winter Solstice. We then have our shortest days and receive a minimum of heat and light from the Sun that is hovering over the Tropic

of Capricorn, $23\frac{1}{2}$ degrees south of the Equator. Conditions are reversed in the southern hemisphere for obvious reasons. Their Winter is our Summer; their Summer our Winter. Twice a year, at the equinoxes in March and September, the Sun is on the Equator, the day is of equal length all over the world and each hemisphere receives the same amount of light and heat from the rays of the Sun.

If the effect in the change of the angle of the Sun's rays on the Earth's surface were instantaneous, our coldest period would be at the Winter Solstice and our warmest period at the Summer Solstice, but due to the blanket of atmosphere around the Earth and the cumulative effect in the heating or cooling of the Earth's surface, we have "the lag of the seasons" that brings our warmest and coldest periods some five or six weeks after the Sun is "farthest north" or "farthest south".

The Seasons, 1948

(Eastern Standard Time)

d h m

Mar. 20 11 57 A.M. Sun enters sign of Aries; spring begins in northern hemisphere.
 Jun. 21 7 11 A.M. Sun enters sign of Cancer; summer begins in northern hemisphere.
 Sept. 22 10 22 P.M. Sun enters sign of Libra; autumn begins in northern hemisphere.
 Dec. 21 5 34 P.M. Sun enters sign of Capricornus; winter begins in northern hemisphere.

NOTE: The rotation of Venus is uncertain, but is probably a few weeks or months. The equatorial diameters of the Earth, Jupiter, and Saturn are given; the polar diameter of the earth is 7900.0 mi., of Jupiter 82,769 mi., and of Saturn 67,170 mi. The above table was taken from *New Handbook of the Heavens*, 2d ed. (McGraw-Hill Book Co.). *Period of revolution around the earth.

The Moon

The planet Mars has two tiny satellites or moons, Jupiter has eleven, Saturn nine, Uranus four and Neptune one. The Earth, like Neptune, has one satellite that is uniformly called The Moon. It is a globe of approximately 2160 miles in diameter with a surface deeply pitted by great craters. It has no atmosphere that astronomers can detect and shines only by re-

flected light of the Sun. Though it seems bright to us at "full moon", it reflects only about 7 percent of the light poured on it by the Sun.

The path of the Moon on its travels around the Earth is elliptical, with the Earth at one focus of the ellipse. The distance of the Moon from the Earth varies from 221,463 miles (perigee) to 252,710

miles (apogee), the average distance being 238,860 miles. The really curious thing about the Moon is that it revolves around the Earth in 27 days, 7 hours, 43 minutes, 11.47 seconds and rotates on its axis in exactly the same time, which is why we always see the same side of the Moon. Due to what are known as "librations in latitude and longitude" and also a "diurnal libration", we do see "around the edge of the Moon" at different times and in this manner a total of 59 percent of the Moon's surface has been observed, but the other 41 percent never has been seen by human eye.

Although the Moon revolves around the Earth in approximately $27\frac{1}{3}$ days, it is, on the average, a matter of $29\frac{1}{2}$ days (29 days, 12 hours, 44 minutes, 2.78 seconds) from

one New Moon to the other because the Earth is moving around the Sun while the Moon is moving around the Earth and the "New Moon" depends upon the relative positions of the three bodies. If the planes of orbit of the Earth and the Moon coincided, there would be an eclipse of the Moon at every "Full Moon" and an eclipse of the Sun at every "New Moon", but the (approximately) 5-degree angle between the planes of orbit of the Earth and the Moon causes the Moon on most of its revolutions to miss the Earth's shadow and the Moon's shadow on most trips to miss falling on the Earth. The tidal effects of the Moon are, of course, well known. The "Spring Tides" occur at "Full Moon" and "New Moon" and the "Neap Tides" at "First Quarter" and "Last Quarter".

Eclipses for 1948

(1) *Partial eclipse of the moon, April 23.* Essentially invisible in the U. S. Visible in general in the Indian O. and Asia, except the western parts; the Antarctic areas; Australia; the Pacific O.; and the beginning in the Alaska region. It is an unimportant eclipse, less than 0.03 of the moon's diameter being covered by the earth's shadow at mid-eclipse.

In s. Calif. the moon begins to be slightly eclipsed just before moonset; and as seen from Alaska the moon enters the shadow before moonset, making the beginning of the eclipse visible.

	Universal time (G.C.T.)		
	d	h	m
Moon enters penumbra	23	11	28
Moon enters umbra	23	13	20
Mid-eclipse	23	13	39
Moon leaves umbra	23	13	58
Moon leaves penumbra	23	15	50

(2) *Annular eclipse of the sun, May 8-9.* The path of the annular phase begins at sunrise in the Indian O. about 350 mi. s. of the southern tip of India, goes across Siam at Bangkok ($1^{\text{h}}0^{\text{m}}$ U.T., May 9), across French Indo-China and southeastern China, leaving the coast 62 mi. n. of Shanghai ($1^{\text{h}}55^{\text{m}}$). It goes across the Yellow Sea and Korea, south of Seoul; it traverses the Sea of Japan and enters the Sea of Okhotsk north of Hokkaido, Japan, and enters the Pacific at the s. tip of Kamchatka. It passes over or close to the outermost Aleutian Is. (about $3^{\text{h}}50^{\text{m}}$ U.T.) and ends at sunset at a point about 500 mi. off the Washington coast.

The path of the annular phase is narrow, especially in the middle. The earth's shadow-cone reaches close to the earth, and in the Sea of Japan, east of Korea, a very short total eclipse is possible. At Bangkok the duration of the annular phase is 32^{s} ; this time decreases with progress of the

eclipse to nearly zero at the point mentioned, then gradually increases to about $\frac{1}{2}^{\text{m}}$ in the Aleutian Is.

The eclipse is partial in most of Asia and the East Indies, the n. polar regions, much of the north Pacific, all of Alaska, and generally the n.w. part of North America. At Manila, mid-totality occurs at 9:18 a.m., 120th-meridian-east standard time, with 0.7 of the sun obscured; at Nome, Alaska, at 4:40 p.m., May 8, 165th-meridian-west time, with 0.6 obscured; at Honolulu at 6:22 p.m., Hawaiian time, with 0.2 obscured; at Seattle the beginning of the partial phase occurs at 7:03 p.m., P.S.T., May 8, and at Portland, Oreg., at 7:05 p.m.; at these two stations the sun sets before mid-eclipse.

(3) *Total eclipse of the sun, Nov. 1.* Invisible in North America. The path of the central line of totality begins at sunrise in the Belgian Congo, at Abu Mombasi, 310 mi. n.w. of Stanleyville, equatorial Africa. It goes across Lake Victoria, passing close to Entebbe, cuts across Kenya, going 50 mi. south of Nairobi ($4^{\text{h}}25^{\text{m}}$ U.T.), and leaves the coast near Malinda at $4^{\text{h}}27\frac{1}{2}^{\text{m}}$ U.T. It goes n. of Madagascar, cutting thru the Farquhar Is. at $4^{\text{h}}43^{\text{m}}$ ($7^{\text{h}}43^{\text{a.m.}}$, 45th-meridian-east S.T.). The path of totality travels s.e. and east across the Indian O., passing considerably south of Tasmania, and ending at sunset in the Pacific about 250 mi. w. of South Is., New Zealand.

At Nairobi the duration of totality is 47^{s} ; at the Farquhar Is., $1^{\text{m}}15^{\text{s}}$; and the maximum is $1^{\text{m}}56^{\text{s}}$ in mid-Indian O. There appear to be no islands in the path of totality except the very small islands of the Farquhar group (long. 51° e., lat. 10° s.). Partial phases are visible generally in e. and s. Africa, Arabia, the southern tip of India, all but the n. part of Australia, Tasmania, and most of New Zealand.

Astronomical Constants

1 light-year	5,880,000,000,000 mi.
velocity of light	186,273 mi./sec.
astronomical unit or distance earth-to-sun	93,003,000 mi.
mean distance, earth to moon	238,860 mi.
general precession	50".26
obliquity of the ecliptic	23° 27' 8".26—0".4684(t-1900) *
equatorial radius of the earth	3963.34 statute mi.
polar radius of the earth	3949.99 statute mi.
earth's mean radius	3958.89 statute mi.
oblateness of the earth	$\frac{1}{297.0}$
equatorial horizontal parallax of the moon	57' 2".70
sun's diameter	865,380 mi.
sidereal year	365 ^d .2564
tropical year	365 ^d .2422
sidereal month	27 ^d .3217
synodic month	29 ^d .5306
sidereal day	23 ^h 56 ^m 4 ^s .091 of mean-solar time
mean solar day	24 ^h 3 ^m 56 ^s .555 of sidereal time

*† refers to the year in question, for example 1948.

The Atmosphere

The atmosphere of the Earth—the blanket of air that surrounds our globe and is essential to life—is of interest to astronomers because of its effect on the light that comes to us from heavenly bodies. Air has weight and volume. It refracts (bends or changes the direction of) light rays that enter it. Due to this refraction, we are able to see the Sun and the Moon before they rise and after they set. The "twinkling" of the stars is caused by convection currents in the air that have a rapidly changing refractive effect on the light from the stars. Our twilight is produced by the diffusion in the atmosphere of light from the Sun when it is below the horizon. Meteors become visible when they are heated to incandescence by friction with the atmosphere when, from outer space, they plunge into it at terrific speed.

Prof. Carl Störmer of the University of

Oslo measured the height of the atmosphere and found it to be more than 600 miles, but about half of it by weight is below 18,000 feet. Although we may remark blandly that something is "as light as air", the Earth's atmosphere in bulk is of such enormous weight that at sea level it exerts a pressure of approximately 14.7 pounds per square inch. At higher levels, of course the pressure is less.

Chemically, the atmosphere is composed of nitrogen (approximately 78 percent by volume), oxygen (approximately 21 percent by volume), and extremely minor amounts (about 1 percent in all by volume) of argon, neon, helium, hydrogen and carbon dioxide. There is also present in the air a varying amount of water vapor, which is commonly complained of as "humidity" when the percentage is high in warm weather.

Important Meteor Showers

Date	Meteor stream	Radiant in constellation
Jan. 1-4	Quadrantids	Boötes
Feb. 5-10	Alpha Aurigids	Auriga
Mar. 10-12	Zeta Boötids	Boötes
Apr. 19-23	Lyrids	Hercules
May 1-6	May Aquarids	Aquarius
May 30	Eta Pegasids	Pegasus
June 27-30	Pons-Winnecke meteors	Draco
July 14	Alpha Cygnids	Cygnus
July 26-31	Delta Aquarids	Aquarius
Aug. 10-14	Perseids	Cassiopeia
Aug. 10-20	Kappa Cygnids	Cygnus
Aug. 21-31	Zeta Draconids	Draco
Sept. 22	Alpha Aurigids	Auriga
Oct. 2	Quadrantids	Boötes
Oct. 9	Giacobinids	Draco
Oct. 18-23	Orionids	Orion
Nov. 14-18	Leonids	Leo
Dec. 10-13	Geminids	Gemini

Meteors and Meteorites

Meteorites are meteors that have come down to Earth. Meteors are masses of mineral or metal or both that plunge into the Earth's atmosphere at great speed and become incandescent from the resultant friction so that they are seen in the sky as "fireballs" (bolides) or "shooting stars". The "fireballs" are the larger, make a greater flash across the sky and sometimes explode. Meteors come in all sizes but most of them verge on the microscopic and burn up completely in the flash that makes them visible from 40 to 60 miles above the Earth's surface. Millions of them enter our atmosphere every twenty-four hours and probably not more than one or two a day survive to strike the ground as meteorites.

The largest meteorite ever found is located near Grootfontein, Southwest Africa, and its weight is estimated between 50 and

0 tons. The second largest meteorite (the Chhignito, weight $36\frac{1}{2}$ tons) was found by Admiral Peary, Arctic explorer, at Cape York, Greenland, and is now on exhibition in the Hayden Planetarium, New York City. The largest meteorite found on United States soil is the Willamette (weight $15\frac{1}{2}$ tons), which fell near Portland, Oreg., and is now in the American Museum of Natural History, New York City.

Craters produced by the fall of meteorites have been found in many countries. The first to be recognized and the largest known is Meteor Crater in Arizona, a depression about 4,000 feet in diameter, about 600 feet deep, and with exterior walls rising 250 feet above the surrounding plain. Me-

teor craters have been found near Odessa, Texas; Haviland, Kansas; in the Arabian Desert; in Central Australia and—a notable group of fifty or more—in the region of the Stony Tunguska River in northern Siberia.

Many meteors travel in swarms, believed in some cases to be disintegrated comets. The Perseid shower that occurs annually Aug. 10-14 is thought by some astronomers to be all that remains of Tuttle's Comet and the Leonid shower, which reaches a maximum in mid-November every 33 years, similarly is suspected of being what is left of Tempel's Comet. The Leonid shower of 1833 was the greatest meteor display of which astronomers have record.

Projection Planetaria

Dr. Robert G. Aitken, Director Emeritus of the Lick Observatory, called the Zeiss Projector in planetarium use "the most remarkable instrument that has ever been devised to exhibit impressively, and with the illusion of reality, the motions of the heavenly bodies and the phenomena that result from these motions". The first of these projectors was invented and developed by Dr. Walter Bauersfeld at the Carl Zeiss plant at Jena, Germany, and the first planetarium in which it was put to use was in the Deutsches Museum in Munich, May, 1925. Between that time and the outbreak of World War II, twenty-seven other such Zeiss Projectors were constructed and shipped for use in planetaria spread around the world. Five planetaria for the use of the Zeiss Projector were erected in the United States. There were also Zeiss Projector planetaria in Vienna, The Hague, Brussels, Stockholm, Moscow, Paris, Milan, Rome, Tokyo and Osaka. Some smaller

planetaria, with other projectors, have been built and are in operation in various places in the United States and Canada.

The Zeiss Projector planetaria in the United States are, in the order in which they were built:

Adler Planetarium, 900 E. Achsah Bond Drive, Chicago 5, Ill.

Director, Wagner Schlesinger.

Fels Planetarium, 20th St., Benjamin Franklin Parkway, Philadelphia 3, Pa.

Director, Roy K. Marshall.

Griffith Planetarium, P.O. Box 9866, Los Feliz Station, Los Angeles 27, Calif.

Director, Dinsmore Alter.

Hayden Planetarium, 81st St., Central Park West, New York 24, N. Y.

Director, Gordon A. Atwater.

Buhl Planetarium, Federal and West Ohio St., Pittsburgh 12, Pa.

Director, Arthur L. Draper.

Notable Telescopes of the World

Refractor Telescopes

Size in inches	Observatory	Location
40	Yerkes	Williams Bay, Wis.
36	Lick	Mt. Hamilton, Calif.
32.7	Paris (Univ. of)	Meudon, France
31.5	Astrophysical	Potsdam, Germany
30	Allegheny	Pittsburgh, Pa.
30	Bischoffsheim	Nice, France
30	Poulkova	Leningrad, U. S. S. R.

Reflector Telescopes

200	Palomar (being set up)	Mt. Palomar, Calif.
100	Mt. Wilson	Pasadena, Calif.
82	McDonald	Mt. Locke, Texas
74	Dunlap	Richmond Hill, Ont.
72	Lord Ross (dismantled)	Parsonstown, Eire
72	Dominion Astrophysical	Victoria, B. C.
69	Perkins	Delaware, Ohio
61	Harvard	Oak Ridge, Mass.
60	Bloemfontein	Bloemfontein, U. of S. Af.
60	Mt. Wilson	Pasadena, Calif.
60	Cordoba	Bosque Alegre, Argentina

Astronomical Photography

Since almost all astronomical research is now carried on by photographing the heavenly bodies, cameras and telescopes designed for this purpose are of the utmost importance.

What many astronomers consider the greatest advance in the making of astronomical instruments in the last fifty years was the production of the Schmidt Camera. The details of construction and method of operation of this camera were made known in 1930 by Bernhard Schmidt of the Hamburg Observatory at Bergedorf, Germany. The Schmidt Camera takes photographs with large fields of vision and sharp definition at much greater speed than was possible with earlier apparatus. Schmidt Cameras as fast as $f/0.6$ have been made, and those with a speed of $f/1$ are common. These remarkable cameras have been installed at many observatories in various parts of the world.

Symbols

☉ the sun	♄ Saturn
☾ the moon	♅ Uranus
☿ Mercury	♆ Neptune
♀ Venus	♇ Pluto
♁ the earth	♄ conjunction
♂ Mars	☾ occultation
♃ Jupiter	♄ opposition

Signs of the Zodiac

and average date of sun entering

1. ♈ Aries, the Ram, Mar. 21	7. ♎ Libra, the Balance, Sept. 23
2. ♉ Taurus, the Bull, Apr. 20	8. ♏ Scorpius, the Scorpion, Oct. 23
3. ♊ Gemini, the Twins, May 21	9. ♐ Sagittarius, the Archer, Nov. 22
4. ♋ Cancer, the Crab, June 21	10. ♑ Capricornus, the Goat, Dec. 22
5. ♌ Leo, the Lion, July 23	11. ♒ Aquarius, the Water-bearer, Jan. 20
6. ♍ Virgo, the Virgin, Aug. 23	12. ♓ Pisces, the Fishes, Feb. 19

Phenomena, 1948 (Eastern Standard Time)

January

d	h	m	
2	1	—	a.m. The earth in perihelion
2	11	37	p.m. ☾ on celestial equator
13	11	25	p.m. ☿ ♀ ☾, ♀ 3°35' north
17	—	—	☿ on meridian, 3 a.m., L.C.T.

CHRONOLOGY

GREAT HISTORICAL EVENTS

Compiled by

ENCYCLOPAEDIA BRITANNICA

Before the Christian Era—(B. C.)

- 000-4000—Advanced stage of civilization in Egypt and Mesopotamia.
- 2700—Huang-Ti founds Chinese Empire.
- 000 (?)—Indo-Europeans invade northern Greece.
- 700-1300—Rivalry between Assyria and Babylonia for control of western Asia.
- 0800 (?)—Moses leads Jews out of Egypt.
- 1194-1184 (?)—Trojan War: Greeks emerge supreme after legendary siege of Troy.
- 753—Legendary founding of Rome by Romulus.
- 500-400—Rise of Maya civilization in Mexico.
- 499-479—Persian Wars: Persians, in expeditions against Greece, fail in efforts at subjugation.
- 431-404—Peloponnesian War: Spartans, under Lysander, take Athens to become supreme in Greece.
- 390—Barbarian Gauls sack Rome.
- 340—Rome assumes ascendancy over towns of Italy.
- 334-330—Alexander the Great conquers Greece, Persia, Egypt, and part of India.
- 264-146—Punic Wars: Romans, in campaigns against Carthaginians, seize Sicily and Spain and destroy Carthage (later rebuilt by Romans, destroyed by Arabs in 698 A.D.)
- 45—Caesar becomes dictator for life.
- 44—Caesar assassinated. Mark Antony seizes Rome.
- 31—Octavius defeats Antony, conquers Egypt.
- 30—Suicides of Antony and Cleopatra.
- 27—Octavius becomes Emperor Augustus; Roman Empire established.
- 4 (?)—Birth of Christ (according to many historians).

The Christian Era—(A. D.)

- 29 (?)—Crucifixion of Christ.
- 78—Agricola conquers Britain.
- 247—Goths begin invasion of Europe.
- 306—Constantine the Great, first Christian Emperor, defeats the Franks.
- 330—Constantine makes Constantinople the seat of the Roman Empire.
- 400—Goths under Alaric invade Italy.
- 410—Sack of Rome by Alaric.
- 451—Battle of Châlon: Huns under Attila defeated by Romans.
- 476—Fall of Rome; traditional date dividing ancient and medieval history.
- 622—Hegira (flight of Mohammed from Mecca). After Mohammed's death in 632, Moslems sweep over much of western Asia and northern Africa.
- 711—Moslems cross into Spain.
- 732—Charles Martel defeats Moslems in Battle of Tours, preventing their invasion of France.
- 800—Charlemagne crowned first emperor of Holy Roman Empire; Christianity established over much of Europe.
- 1066—Battle of Hastings: William the Conqueror successfully invades England.
- 1096-1291—The Crusades: European Christians, in seven periods of conflict, oppose the Moslems and Turks, developing commerce and extending Christianity.
- 1206—Mongolian Empire established by Genghis Khan.
- 1215—Magna Carta proclaimed at Runnymede, England.
- 1260-92—Kublai Khan establishes sovereignty in China.
- 1338-1453—Hundred Years' War: England loses lands in France.
- 1431—Joan of Arc burned at the stake.
- 1453—Turks capture Constantinople.
- 1455-85—Wars of the Roses: House of York against House of Lancaster; Tudor line started by Henry VII.

- 1492—Moors driven out of Spain. Christopher Columbus discovers America (West Indies).
- 1517—Beginning of Reformation in Germany.
- 1522—One of Magellan's ships circumnavigates the globe.
- 1571—Battle of Lepanto: Don John of Austria routs Turkish fleet.
- 1588—Spanish Armada destroyed by British.
- 1607—Jamestown, Va., settled by English under Capt. John Smith.
- 1618-48—Thirty Years' War: England, Holland, France, Sweden and German Protestants against Spain, Italy and German Catholics; Peace of Westphalia ends conflict, Alsace going to France, Swiss independence being recognized, and German secularized states being given religious freedom.
- 1619—First representative assembly in America at Jamestown, Va. First Negro slaves land at Jamestown from Dutch ship.
- 1620—Pilgrims land at Plymouth Rock.
- 1642-52—Great Rebellion: civil wars in England lasting from 1642 to 1646 and from 1648 to 1652; Charles I executed; Oliver Cromwell establishes commonwealth.
- 1644—Manchu Dynasty established in China, lasting until 1912.
- 1660—Monarchy restored in England under Charles II.
- 1665—The Great Plague in London.
- 1704—British capture Gibraltar from Spain.
- 1707—Scotland and England united.
- 1709—Battle of Poltava: Russians under Peter the Great defeat Swedes under Charles XII.
- 1752—Benjamin Franklin, flying kite, discovers lightning to be identical with electricity.
- 1756-63—Seven Years' War: France, Austria, Sweden, and Russia against England and Prussia; Clive defeats French at Battle of Plassey (1757), marking beginning of British supremacy in India; England wins Canada; Prussia retains Silesia.
- 1765—Stamp Act passed by British Parliament; Stamp Act Congress in New York threatens boycott unless repealed.
- 1770—The Boston Massacre (March 5).
- 1773—Boston Tea Party (Dec. 16).
- 1774—First Continental Congress, Philadelphia (Sept. 5).
- 1775-83—American Revolution. Outstanding events: 1775—Battle of Lexington-Concord (April 19). Battle of Bunker Hill (June 17). 1776—Declaration of American Independence (July 4). Battle of Long Island (Aug. 27). 1777—Congress adopts Stars and Stripes (June 14). Battle of Brandywine (Sept. 11). Battle of Germantown (Oct. 4). Burgoyne surrenders at Saratoga (Oct. 17). 1778—Battle of Monmouth (June 28). Capture of Kaskaskia (July 4). 1779—Battle of Savannah (Oct. 8-9). 1780—Major André hanged as spy (Oct. 2). Battle of King's Mountain (Oct. 7). 1781—Battle of Cowpens (Jan. 17). Battle of Yorktown (Sept. 28-Oct. 19) and British surrender by Lord Cornwallis. 1783—Peace treaty signed by U. S. and Great Britain (Sept. 3).
- 1787—U. S. Constitution drawn up at Philadelphia (May 14).
- 1789—First U. S. Congress meets (April 6). Washington inaugurated as first President (April 30).
- 1789-99—French Revolution. Outstanding events: 1789—Bastille destroyed (July 14). 1792—War with Prussia. France declared republic (Sept. 21). 1793—Louis XVI and Queen Marie Antoinette beheaded. Beginning of Reign of Terror. 1795—Napoleon Bonaparte heads army. Peace with Prussia. Directory established (Oct. 27). (Revolution merges into Napoleonic Wars.)
- 1792—Trial of Warren Hastings, British administrator in India.
- 1796-1815—Napoleonic Wars. Outstanding events: 1796—War in Italy. 1798—Campaign in Egypt. 1799—Napoleon made first Consul of French republic. 1804—Napoleon crowned emperor (Dec. 2). 1805—Nelson defeats French in Battle of Trafalgar (Oct. 21). French defeat Russians and Austrians in Battle of Austerlitz (Dec. 2). 1812—French defeat Russians in Battle of Borodino (Sept. 7). 1813—French defeated in Battle of Leipzig (Oct. 16-19). 1814—Napoleon abdicates (April 11), sent to Elba. Louis XVIII becomes King of France. First Treaty of Paris (May 30). 1815—Napoleon flees Elba (Feb. 26). Conclusion of Congress of Vienna (June 9). Napoleon defeated in Battle of Waterloo (June 18). Second Treaty of Paris (Nov. 20).
- 1800—Britain and Ireland united.
- 1803—Louisiana Purchase.
- 1804-06—Journey of Lewis and Clark overland to U. S. Northwest.
- 1805—Battle of Trafalgar. Nelson's great victory and death (Oct. 21).

- 1812-14—War of 1812. Outstanding events:
1812—Declaration of War by U. S. (June 18). 1814—U. S. signs treaty with Britain at Ghent, Belgium (Dec. 24).
- 1819—Florida purchased from Spain.
- 1820—Missouri Compromise permits slavery in that state.
- 1823—Monroe Doctrine proclaims that no European power may seize territory or set up a government on American continents.
- 1830—Revolt in France; Charles X flees; Louis Philippe becomes king.
- 1832—South Carolina nullifies U. S. protective tariff law.
- 1836—Battle of the Alamo (March 6): Texas declares its independence from Mexico.
- 1846-48—Mexican War: boundary dispute between U. S. and Mexico; by Treaty of Guadalupe Hidalgo (1848), Mexico cedes Calif., Nev., and Utah to U. S.; Texas boundary set at Rio Grande.
- 1848—French depose Louis Philippe, set up Second Republic under Louis Napoleon.
- 1852—Louis Napoleon sets up second empire and takes title of Napoleon III.
- 1853-56—Crimean War: Russia loses claim to Greek Christians under Turkish flag.
- 1857—Dred Scott decision of U. S. Supreme Court (March 6) holds that a Negro slave is not a citizen.
- 1858—Lincoln-Douglas debates in Illinois.
- 1859—John Brown's raid on Harpers Ferry (Oct. 16).
- 1860—South Carolina secedes from the Union (Dec. 20).
- 1861—Seceding states proclaim Confederacy; Jefferson Davis named president (Feb. 9).
- 1861—First Italian parliament; Victor Emmanuel proclaimed king.
- 1861-65—American Civil War. Outstanding events: 1861—Battle of Bull Run (July 21). 1862—Battle of *Monitor* and *Merrimac* (March 9). Battle of Shiloh (April 6-7). Seven Days battle (June 26-July 2). Battle of Antietam Creek (Sept. 16-17). 1863—Lincoln's Emancipation Proclamation (Jan. 1). Battle of Chancellorsville (May 2-4). Battle of Gettysburg (July 1-3). Grant captures Vicksburg (July 4). Battle of Chickamauga (Sept. 19-20). Battle of Lookout Mountain (Nov. 24-25). 1864—Battle of Wilderness (May 5-6). Battle of Spotsylvania (May). Sherman's march through Georgia (ended Dec. 20). 1865—Lee surrenders at Appomattox (April 9).
- 1865—Lincoln shot by John Wilkes Booth (April 14) and dies (April 15).
- 1867—Alaska bought from Russia by U. S.
- 1869—Central Pacific and Union Pacific rail lines joined near Ogden, Utah (May 10), completing first trans-continental railroad.
- 1870-71—Franco-Prussian War: ends with Treaty of Frankfurt (May 10, 1871).
- 1873—Financial panic in New York.
- 1876—Battle of the Little Big Horn in Montana: massacre of General Custer's forces by the Sioux (June 25).
- 1877-78—Russo-Turkish War: power of Turkey in Europe broken; redivision of southeastern Europe at Congress of Berlin (June 13-July 13, 1878).
- 1881—Alexander II of Russia assassinated by nihilists (March 13). President Garfield fatally shot (July 2, dies Sept. 19).
- 1883—Pendleton Act establishes Civil Service Commission and merit system.
- 1894-95—Chinese-Japanese War: Japan wins Formosa.
- 1898—Spanish-American War. Outstanding events: U. S. battleship *Maine* blown up in Havana harbor (Feb. 15). Dewey destroys Spanish fleet at Manila (May 1). Charge of San Juan Hill (July 1). Cervera's fleet destroyed off Santiago, Cuba, by U. S. ships (July 3). Treaty of Paris signed (Dec. 10) with Spain ceding the Philippines and Puerto Rico.
- 1898—Radium discovered by the Curies.
- 1899-1902—Boer (South African) War: resistance of Dutch to British government in Transvaal; Boers defeated and sign peace treaty at Pretoria (May 31, 1902).
- 1899—Filipinos revolt (Feb. 4); U. S. forces capture rebel leader, Aguinaldo (March 23, 1901).
- 1900—Boxer uprising in China against foreigners and Chinese Christians.
- 1901—President McKinley fatally shot (Sept. 6, dies Sept. 14).
- 1904-05—Russo-Japanese War: result of conflicts in Manchuria; Port Arthur surrenders to Japanese (Jan. 2, 1905); after Treaty of Portsmouth (Sept. 5, 1905), Japan emerges as major power.
- 1912—Republic established in China (Feb. 12).
- 1912-13—Balkan Wars: Bulgaria, Serbia, Greece, and Montenegro allied successfully against Turkey; later Bulgaria attacks Serbia and Greece and is defeated.
- 1914—U. S. troops land at Veracruz, Mexico, and occupy city for several months. Archduke Francis Ferdinand of Austria assassinated (June 28) at Sarajevo by Serbs, precipitating World War I.

- 1914-18—World War I: Central Powers (Austria-Hungary, Germany, Bulgaria and Turkey) against the Allies (United States, Great Britain, France, Russia, Belgium, Serbia, Greece, Rumania, Montenegro, Portugal, Italy and Japan). Outstanding events: 1914—Austria declares war on Serbia (July 28). Germany declares war on Russia (Aug. 1) and France (Aug. 3). Germans invade Belgium (Aug. 4). Britain declares war on Germany (Aug. 4). Germans defeat Russians at Tannenberg, East Prussia (Aug. 31).
- 1918—President Wilson's Fourteen Points of Peace speech (Jan. 8). Battle of the Somme (March 21-April 6). Battle of the Aisne (May 27-June 5). Second Battle of the Marne (July 15-Aug. 4). U. S. troops take St. Mihiel (Sept. 13). Battle of the Meuse-Argonne (Sept. 20-Nov. 11). Allies break Hindenburg line (Oct. 5). Armistice signed (Nov. 11).
- 1917—Balfour Declaration (Nov. 2) promises Jews homeland in Palestine.
- 1919—Treaty of Versailles signed (June 28); U. S. Senate rejects League of Nations (Nov. 19).
- 1919—The Third International (organization of Communist parties of all nations) founded at Moscow (March). Treaty of Versailles signed (June 28); U. S. Senate refuses to ratify treaty (Nov. 19).
- 1920—League of Nations comes into existence (Jan. 10). National Prohibition goes into effect (Jan. 20). Woman Suffrage amendment ratified (Aug. 26).
- 1922—Fascist coup in Italy; Mussolini forms cabinet (Oct. 31).
- 1923—Munich beer hall putsch led by Hitler is put down (Nov. 8-9).
- 1924—Teapot Dome oil scandal.
- 1925—William Jennings Bryan and Clarence Darrow in Scopes evolution trial in Tennessee.
- 1926—General strike in Great Britain. Germany joins League of Nations.
- 1927—Charles A. Lindbergh flies solo across Atlantic (May 20-21).
- 1928—Kellogg Peace Pact signed (Aug. 27); representatives of fifteen nations outlaw war.
- 1929—New York stock market collapses (Oct. 29); depression begins.

HEADLINES OF THE YEARS

1930-1946

Compiled by

THE NEW YORK HERALD TRIBUNE

- 1930** On a crisp fall morning in October, 1929, the N. Y. Stock Market plunged downward. In a few hours, thousands of paper fortunes and some real ones were wiped out. The nation awoke as if at the shrill clatter of an alarm clock. This was the end of an era. Some months before that historic morning in Wall Street, the nation's economic machinery had been creaking ominously and slowing down. Unemployment spread, gloom and worry were in the air.
- Jan. 22** George V opens five-power naval parley in London.
- 26 Primo de Rivera quits after ruling Spain with iron fist 6½ years.
- Feb. 20** Richard E. Byrd and party quit Antarctica after year.
- Mar. 6** Communists in nationwide demonstration meet with tear gas at White House.
- 7 Hjalmar Schacht resigns as Reichsbank head, protesting Young Plan terms.
- 10 Wickersham Committee reports complete breakdown of prohibition enforcement.
- 11 Babe Ruth signs biggest contract in baseball, \$160,000 for 2 years.
- 13 Discovery of ninth planet (Pluto) announced by U. S. astronomers.
- 25 German liner *Europa* makes new transatlantic record, 4 days, 17 hours, 6 minutes.
- 28 William T. Cosgrave resigns as president of Eire.
- April 20** Charles A. Lindbergh sets cross-continent air record, 14 hours, 45 minutes.
- 22 Navy pact signed by U. S., Britain, Japan, France and Italy.
- May 5** Mahatma Gandhi arrested.
- 7 Senate rejects John J. Parker for Supreme Court because of anti-labor record.
- 17 European Federation urged by Aristide Briand.
- June 14** House passes Smoot-Hawley tariff.
- 22 Son born to Lindberghs.
- July 7** Sir Arthur Conan Doyle, creator of Sherlock Holmes dies, promises to communicate from spirit world. (*Never does.*)
- 17 Britain rejects Briand's plan for a United States of Europe.
- Aug. 17** Dale Jackson and Forest O'Brine set endurance air record—647 hours over St. Louis.
- 23 Bodies of S. A. Andrée and companions who tried to cross North Pole in balloon in 1896 found.
- 25 Samuel Seabury named to investigate N. Y. C. Magistrates Courts.
- Sept. 2** Dieudonné Coste and Maurice Bellonte complete Paris-to-N. Y. non-stop in 37 hours, 17 minutes. J. F. Crater, New York Supreme Court Justice wanted in investigation missing. (*Never found.*)
- 6 Argentine troops seize capital.
- 23 Soviets selling Old Masters; Mellon buys \$800,000 worth.
- Oct. 5** British air minister and 45 killed as R-101, world's largest airship, crashes over France.
- 9 Forty-six U. S. warships decommissioned as Navy economizes.
- 24 Military chiefs seize Rio, capture Brazil's president; mobs riot, twenty-seven dead.
- Nov. 2** Haile Selassie crowned Emperor.
- 4 Franklin D. Roosevelt reelected Governor of N.Y. Democrats gain throughout nation.
- 14 Police cars and trucks rush food to 8,849 hungry N. Y. families.
- 17 Strikes sweep Spain; riots in Barcelona as 200,000 workers quit.
- 19 Vatican linked by phone to outside world; first call from Cardinal Hayes.
- 21 Stalin in first interview with U. S. reporter urges U. S. trade with Soviet Union.
- Dec. 2** Hoover asks Congress for \$150,-000,000 to aid unemployed.
- 11 New York's Bank of United States, with 62 branches, 400,000 depositors, closed—insolvent.
- 12 Sinclair Lewis, accepting Nobel prize at Stockholm, derides U. S. culture, traditions, standards.
- DIED:** Kenneth Hawks, Jan. 2; Mabel Normand, Feb. 23; William Howard Taft, Mar. 8; A. Conan Doyle, July 7.

1931 All the world was restless. Rioting in Cuba and Spain, revolutionary rumblings in South and Central America (the Marines were in Nicaragua), Fascist bluster in Italy told of world-wide ferment in economics and politics. Here in the U. S. the depression deepened. A worried President summoned groups of anxious businessmen to the White House; neighborhood soup kitchens were set up to feed the hungry. Christmas shoppers looked away as they passed jobless, shivering men selling apples on street corners. A song that caught the imagination was "Brother, Can You Spare a Dime?" The answer, as 1931 began, was generally "No."

Jan. 2 Eight U. S. Marines killed, 2 wounded in ambush by Nicaraguan rebels.

9 Soviet budget 16 billions, a world's record, with immense outlays for industry; private trade sinks to vanishing point.

20 Wickersham Board favors dry law revision; Hoover opposes modification, urges further trial of "noble experiment."

29 U. S. apologizes to Italy for alleged slur by Maj. Gen. Smedley Butler on Mussolini.

Feb. 5 Malcolm Campbell sets new speed record in auto, 245,733 miles per hour at Daytona, Fla.

24 Supreme Court holds 18th (Prohibition) Amendment constitutional.

27 The New York *World* suspends; sold by Pulitzers to The *Telegram*.

U. S. Senate passes soldiers' bonus.

Mar. 23 N. Y. Legislature orders investigation of N. Y. City affairs; Gov. Roosevelt calls on Mayor James J. Walker to meet charges.

28 Paul von Hindenburg assumes rule of Reich as dictator "to curb radical excesses."

31 Knute Rockne killed in air crash over Kansas.

1,000 die in earthquake at Managua, Nicaragua.

April 7 Anton J. Cermak elected Mayor of Chicago, defeating "Big Bill" Thompson.

14 Alfonso signs abdication, quits Spain with family. Niceto Alcalá Zamora president.

28 Roosevelt clears Walker; holds charges "too general."

May 1 Empire State, tallest building in world, opens; 102 stories, 1,100 feet.

7 Francis (Two-Gun) Crowley, youthful killer, captured after spectacular battle with N. Y. police.

Arturo Toscanini cuffed, slapped by Italian youths at Bologna for refusal to play Fascist anthem.

28 Auguste Piccard and Henry Kipper up 52,493 feet over Alps in balloon testing stratosphere rays.

30 Mussolini closes "Catholic Action" in Italy charging political activity.

June 6 Navy to drop base at Guam, no longer of military value.

20 Hoover proposes world debt moratorium for one year; Congress backs plan to save Reich.

July 2 Post and Gatty back at Roosevelt Field, completing circuit of globe in 8 days, 15 hours, 51 minutes. Previous record (Graf Zeppelin) 12½ days.

Aug. 9 Revolt fails in Cuba; ex-President Mario G. Menocal, rebel leader, flees.

24 J. Ramsay MacDonald resigns as Prime Minister of Britain.

Sept. 19 Japan seizes Mukden, Manchuria.

Oct. 24 Al Capone gets eleven years and \$50,000 fine for tax fraud.

25 George Washington Bridge opens.

Nov. 4 Japan is cited before League of Nations for trespassing in Manchuria.

5 MacDonald is Prime Minister, Stanley Baldwin is Lord President of Council in Britain.

11 Charles G. Dawes ordered to Paris to aid League in settling Manchurian conflict.

12 \$59,000,000 Naval appropriations slash ordered by Hoover.

29 Japan rejects, while China accepts, League survey in Manchuria.

Dec. 2 Dr. Robert A. Millikan brings from Germany pictures of atom smashing with cosmic rays.

8 Chancellor Heinrich Brüning of Germany slashes wages and prices by decree; says he will use martial law to curb Hitler.

22 War debt moratorium is ratified in Senate.

DIED: Nellie Melba, Feb. 22; Ella V. Wendel, Mar. 13; Arnold Bennett, Mar. 27; Knute Rockne, Mar. 31; Nicholas Longworth, Apr. 9; Mrs. Whitelaw Reid, Apr. 29; George F. Baker, May 2; David Belasco, May 14; Ralph Barton, May 20.

1932 People were dissatisfied with Prohibition. The Wickersham Committee survey disclosed the monumental traffic in alcohol, the organized and amply financed gangsterism that everyone knew about. Hoover and Congress vacillated. The Depression still plagued industry, merchandising, real estate. The nation's business seemed stalled on dead center. That gloomy, listless December, the nation's ear was tuned to shuffling cards, and public interest focussed on a bridge table where Sidney Lenz and the Culbertsons played an epic contract bridge match to determine the merits of their systems of bidding.

Jan. 9 Bruening notifies world Germany is unable to pay reparations.

12 Hattie W. Caraway, Ark., elected to U. S. Senate, first woman elected to that body.

24 Samuel Seabury indicts Tammany for New York misrule, after six months investigation.

29 Japanese invade Shanghai; U. S. warns Tokyo to respect American rights.

Feb. 3 Andrew Mellon named Ambassador to England; Ogden Mills Secretary of Treasury.

15 Hoover names Benjamin N. Cardozo to U. S. Supreme Court, succeeding Oliver Wendell Holmes (retiring).

27 James Chadwick, British scientist announces discovery of neutron, smallest particle.

Mar. 1 Lindbergh baby kidnaped at Hopewell, N. J.

7 4 killed as 3,000 riot for jobs at Ford plant near Detroit.

12 Ivar Krueger, Swedish "Match King" suicide.

13 Von Hindenburg beats Adolf Hitler in German presidential elections, but fails to get majority.

14 George Eastman, Kodak manufacturer and philanthropist, a suicide at 77.

April 4 Vitamin C isolated after 5-year search by Dr. C. G. King, University of Pittsburgh.

7 Roosevelt makes "Forgotten Man" speech on radio, setting keynote of his campaign for President.

9 Lindbergh paid \$50,000 ransom over Bronx Cemetery Wall (Apr. 2), New Jersey police announced.

10 Hindenburg beats Hitler in runoff by 5,900,000 votes; bans SS troops.

13 Receivers asked in Chicago for Samuel Insull's \$1,300,000,000 utility empire.

May 1 Soviet turns on world's biggest electric power plant at Dnieprostroy.

7 French President Doumier killed by Russian fanatic.

12 Lindbergh baby found slain in brush-pile.

15 Japanese Premier Tsuyoshi Inukai assassinated.

20 Amelia Earhart Putnam makes solo flight from Harbor Grace, Newfoundland, to Culmore, Ireland; first woman to fly Atlantic alone.

June 2 Bonus Army of 3,500 reported marching on Washington from North, Central, Middle West States.

5 John D. Rockefeller, Jr., calls for Repeal; declares Prohibition has failed.

16 Hoover renominated, Charles Curtis for Vice President; Republicans reject repeal, advocate state option.

July 1 Democrats nominate F. D. Roosevelt on 4th ballot.

7 House passes 2-billion-dollar Garner-Wagner relief bill.

11 Hoover vetoes relief bill.

21 Franz Von Papen seizes German government, puts Army in charge after Nazi-Communist rioting.

28 U. S. Army under Gen. Douglas MacArthur drives Bonus Army out of Washington with tanks, tear gas; 1 killed by police bullet.

Aug. 30 Hermann W. Goering elected Reichstag president; Von Papen continued as Chancellor.

31 Germany demands arms equal to other nations.

Sept. 1 Mayor Walker of New York resigns during ouster proceedings before Roosevelt.

9 39 killed, 72 hurt as ferry blows up in East River.

30 London: mass demonstrations of hunger marchers stopped by police in Whitehall.

Nov. 6 Supreme Court orders retrial of Scottsboro Case.

8 Roosevelt wins in Democratic landslide; Congress wet, overwhelmingly Democratic.

22 Roosevelt confers with Hoover at White House.

Dec. 5 Repeal loses by six votes in House.

21 House votes 3.2 beer.

1933

Roosevelt was in: Hoover out. Roosevelt was fitting cabinet pieces together, making plans. Hoover was packing his papers. In the long pause from November to March, the rolls of jobless mounted and the nation grew more jittery. From Germany, increasingly turbulent and truculent, the name "Adolf Hitler" came more and more into the news. It was the year of the N. R. A. and the "blue eagle" and the year Prohibition ended. "The only thing we have to fear is fear itself," said Roosevelt in his inaugural speech.

Jan. 4 Iowa farmers threaten to lynch insurance company representative for farm foreclosure.
5 Ex-President Calvin Coolidge dies of heart attack at Northampton, Mass.

19 Soviet exiles 45,000 Cossacks to Siberia as grain slackers.

30 Hitler made Chancellor of Germany.

Feb. 1 Hitler ends Reichstag; calls for referendum; pledges fight on Marxism, jobs for all.

10 League of Nations demands Japan surrender conquests in China.

13 Hoover urges world to stabilize currencies, return to gold.

14 Gov. Comstock of Michigan proclaims bank holiday; \$50,000,000 rushed to Detroit.

15 Roosevelt escapes death as assassin's bullet fells Mayor Cermak of Chicago at Miami. Police seize Giuseppe Zangara, fanatic.

21 House sends repeal proposal to state conventions. Japan bolts League of Nations.

25 Bank crisis sweeping nation; Congress gives Treasury extraordinary powers.

28 Reichstag set afire; Nazi's blame Communists. Hitler suspends civil rights.

Mar. 4 Capital of Jehol in north China falls to Japanese.

Roosevelt inaugurated; promises wartime action to defeat Depression.

5 Roosevelt proclaims bank holiday; bans hoarding; embargoes gold.

Reichstag votes absolute power to Hitler.

8 Roosevelt plans new money to open banks at once; gold called in.

10 127 die, 4,150 injured in Long Beach, Calif., earthquake.

12 President Roosevelt broadcast first "Fireside Chat."

14 Congress votes 3.2 beer.

15 Exchanges reopen, stocks up.

21 Roosevelt offers plan for 250,000 Civilian Conservation Corps jobs.

C. E. Mitchell, former National City Bank chairman, arrested for income tax evasion; acquitted in subsequent trial.

23 Reichstag confers blanket powers on Hitler; gives up legislative authority for 4 years.

27 Federal employees pay cut 15 percent; drop of 21.7 percent in living cost since 1928.

30 Nazis boycott Jews; order labels on all Jewish stores.

April 3 Airship Akron falls in sea off Jersey; Rear Adm. Wm. A. Moffett and 72 lost.
Michigan first state to vote repeal.

7 Beer barrels roll as 3.2 brew becomes legal.

9 Scottsboro boys found guilty again.

19 U. S. goes off gold standard.

21 Roosevelt and Prime Minister MacDonald meet for recovery talks.

24 5,000 school teachers storm Chicago banks for 30 millions back pay.

May 1 Hitler orders labor for rich and poor, compulsory toil for all.

12 Farm and relief bills totaling \$5,000,000,000 signed by President.

15 U. S. refuses to join Britain and France for three-power action against Hitler.

16 Roosevelt calls on world for non-aggression pact.

17 Hitler accepts, demands equality for Reich.

18 Hugh A. Johnson named N. R. A. administrator.

23 New York votes 20 to 1 for repeal. J. P. Morgan & Co. assets dropped \$255,673,843 since 1929, Senate committee told.

27 Century of Progress exposition at Chicago opens.

June 7 Italy, Britain, France, and Germany sign 4-power pact for ten-year peace at Rome.

12 London Economic Conference opens.

16 Roosevelt signs N. R. A. bill, opens recovery drive; 5,000,000 jobs his goal.

- June** 22 Hitler proscribes all political parties except National Socialists.
- 29 London Economic Conference begs Roosevelt for stabilization agreement; warns of collapse, currency war.
- July** 1 Roosevelt rejects gold bloc stabilization plan.
- 10 Hitler wants Germany 100 percent Nazi, forbids rival parties "forever."
- 11 "Super-Cabinet" formed to direct U. S. Recovery.
- 12 Blanket industrial code offered to force wages to higher levels; 40 cents an hour minimum.
- 19 Italo Balbo leads 24-plane armada to N. Y. after transatlantic journey to Chicago Fair.
- 20 Stocks break 5 to 20 points; worst break in 3 years.
- 22 Wiley Post completes solo globe circuit in 7 days, 18 hours, 45 minutes.
- 27 World Economic Conference adjourns, blaming U. S. for wrecking its work. British adopt Empire fiscal policy.
- Aug.** 3 Fusion nominates F. H. LaGuardia for Mayor of New York City.
- 5 U. S. strike truce signed by Industry and Labor; Sen. Robert F. Wagner heads Mediation Board.
- 7 Reich scorns Anglo-French notice to stay out of Austria.
- 26 killed in riots in Havana.
- 12 President Gerardo Machado flees as mob sacks presidential palace in Cuba.
- 13 Roosevelt sends warship to Cuba.
- 14 Guglielmo Marconi proves microwaves carry further than horizon.
- 27 Raymond Moley resigns from Roosevelt "brain trust."
- Sept.** 1 Hitler insists Jewry be uprooted in Germany.
- 6 Radicals seize power in Cuba.
- 10 Jews organize consumer drive to boycott Nazi products.
- 13 200,000 New Yorkers participate in 10-hour parade up Fifth Avenue for N. R. A.
- 14 Seething Cuba under dictator rule by Dr. Ramon Grau San Martin.
- Oct.** 1 Harry L. Hopkins named Federal relief head.
- 3 Engelbert Dollfuss, Austria, wounded by Nazi fanatic.
- 14 Hitler bolts League of Nations and arms parley at Geneva.
- 16 U. S. remaining aloof in Europe, Norman H. Davis tells Geneva Conference.
- 17 Dr. Albert Einstein, refugee from Germany, arrives in United States, settles in Princeton, N. J.
- 22 Roosevelt begins dollar control, directs R. F. C. to buy gold in world markets.
- 25 Gold price set at 31.36, 27 cents above world price.
- Nov.** 7 F. H. La Guardia elected New York Mayor; Thomas E. Dewey elected District Attorney.
- 8 Cuba in state of war again.
- 11 France bars concessions to Hitler; disagrees with British policy.
- 12 Hitler wins 93 percent vote in referendum on Nazi foreign policy.
- 15 William H. Woodin, III, out as Secretary of Treasury; Morgenthau named to replace him.

- 18 Chaco truce ends boundary war between Paraguay and Bolivia.
- 21 Roosevelt orders silver purchased and coined in new inflation move.
- 22 Crown Prince born to Emperor Hirohito and Empress Nagato of Japan.
- 23 200 dead in French railroad wreck 17 miles east of Paris.
- 24 Assassins stab to death Armenian Archbishop marching to altar in New York church.
- DIED:** Calvin Coolidge, Jan. 5; Thos. J. Walsh, Mar. 2; Anton J. Cermak, Mar. 6.

1934 The New Deal delved into the alphabet and came up with multi-lettered agencies. Mr. Roosevelt's resonant voice roused and reassured the nation in fireside chats. The Blue Eagle flapped. People talked about Section 7-A, codes, N. R. A., C. C. C., farm relief, cracking down on chisellers, and boondoggling. The little guy (it seemed) was coming into his own at last. Prohibition was finished. The nation enjoyed its first legal alcoholic holiday in fifteen years. New York had double cause to celebrate: Tammany was out in the cold for the first time since 1918.

Jan. 4 Roosevelt notifies Congress recovery program will cost \$10,000,000,000 by June 30, 1935.

10 Van Der Lubbe, Dutch communist, beheaded for Reichstag fire.

11 6 Navy planes fly from California to Hawaii in 24½ hours.

31 Dollar cut to 59.6 cents (gold value).

Feb. 6 20 dead in Paris riots as Daladier's government resigns.

12 France paralyzed by general strike. Civil war in Austria, 500 dead.

17 Britain, France, Italy send note to Hitler backing Dolfuss government in Austria.

19 Nazis send ultimatum to Dolfuss.

Mar. 1 Henry Pu-yl becomes Emperor Kang-teh of Manchukuo. (Manchukuo was Japan's new name for Manchuria.)

10 Roosevelt orders return of air mail to civilian lines after ten Army casualties in 20 days.

15 Samuel Insull, disguised as woman, flees Athens to evade extradition to U. S.

24 Roosevelt signs Philippine Independence Bill.

28 Roosevelt gets first setback in Congress as his veto of Patman bonus bill is overridden.

April 13 4,700,000 U. S. families on relief, Hopkins reports.

30 U. S. rejects Japanese claim of hegemony in China.

May 10 Severe drought in Midwest brings dust storms.

28 Quintuplets born to Mrs. Oliva Dionne, at Corbeil, Ont.

June 14 Germany declares six-months moratorium on all foreign debts.

29 Gov. William Langer, North Dakota, sentenced to eighteen months in prison for conspiracy to defraud.

30 Hitler "purge" kills Ernest Roehm and score of other Nazi leaders.

July 4 Madame Curie, co-discoverer of radium, dies at 66.

15 Famine threatens San Francisco in general strike; all unions go out in sympathy with longshoremen and marine workers.

19 San Francisco strike settled.

24 Heat, drought blanket Midwest "dustbowl."

25 Engelbert Dollfuss, Austrian Chancellor, assassinated.

Aug. 2 Hindenburg dies; Hitler becomes absolute dictator of Germany.

9 U. S. nationalizes silver, to pay 50.01 cents an ounce.

11 Dr. William Beebe descends ½ mile in ocean in bathysphere, deepest in history.

26 Hitler asks return of Saar to Germany.

31 Huey Long enters New Orleans with troops; plans to investigate political enemies.

Sept. 5 325,000 out in textile strikes.

8 164 die, many missing as liner *Morro Castle* burns off N. J.

20 Bruno Richard Hauptmann arrested for Lindbergh kidnap-slaying.

25 Gen. Hugh Johnson resigns as N. R. A. administrator.

Oct. 6 Catalonia secedes in Spain; Reds riot, civil war threatens.

9 King Alexander I of Yugoslavia and French Foreign Minister Barthou assassinated at Marseilles by Croatian.

Nov. 4 Charles Kingsford-Smith flies from Honolulu to California in 14 hours, 59 minutes.

6 Democrats gain Congress strength in New Deal election victories.

21 Japan asks naval parity; warns of intention to terminate 1922 Washington agreement.

Dec. 3 France and Germany sign Saar Treaty.

5 Russia "purges" [executes] 66 for plotting with Germans against Stalin regime.

19 Japanese Privy Council votes to abrogate Washington Naval Treaty of 1922.

26 Ethiopia protests to League of Nations against Italian seizures.

29 Japan formally denounces 1922 naval treaty.

DIED: Albert I of Belgium, Feb. 17; Wm. H. Woodin, May 3; Von Hindenburg, Aug. 2.

1935 In Europe the dictators grew more arrogant. Mussolini cried aloud his dreams of Roman grandeur from the Quirinal balcony. In far-off Ethiopia dark warriors primed muskets and sharpened spears. Hitler eyed Austria and the Ruhr.

But why worry? America was climbing out of the Depression, we hoped, business was stirring and money was channeled through relief rolls to the distressed and the hungry. Except for outraged cries from the Liberty League, the New Deal forged ahead.

Jan. 2 Bruno Richard Hauptmann goes on trial at Flemington, N. J., for kidnap slaying of the Lindbergh baby.

4 Roosevelt asks 3,500,000 jobs to end dole.

7 Oil control unconstitutional, Supreme Court decides in first New Deal test.

14 Saar plebiscite 90 percent for reunion with Germany.

24 Liner *Mohawk* sinks after collision off N. J. coast; 34 dead.

29 Senate rejects World Court.

Feb. 10 Italian troops clash with Ethiopians.

13 Hauptmann guilty.

Mar. 1 Saar is returned to Germany.

6 22,000,000 on U. S. relief rolls.

11 Army pilots climb 14 miles in stratosphere flight.

22 First airmail flight across Pacific to Manila.

27 Japanese strike at Peiping.

Dec. 9 Supreme Court denies Hauptmann appeal; to die Jan. 13.

14 Thomas G. Masaryk resigns as President of Czechoslovakia.

22 Anthony Eden becomes England's Foreign Secretary; urges sanctions against Italy.

DIED: Sen. Bronson Cutting, May 6; Aircraftman T. E. Shaw ("Lawrence of Arabia"), May 19; Jane Addams, May 21; Col. Alfred Dreyfus, 75, July 12; Billy Sunday, 72, Nov. 6.

1936

The fuse was lit in Ethiopia and North China. As war rumbled along those far-off horizons, the U. S. sidled behind a "Neutrality Act" and fought shy of foreign entanglements. This time, we said, we will have no truck with foreign wars. As for domestic conflict, John L. Lewis had just punched Bill Hutcheson in the nose and the boys were choosing up sides for Labor's great civil war between the A. F. of L. and C. I. O. It was, in fact, an exciting time for Labor, what with the generous new Wagner Act and the introduction of the sit-down strike. The New Deal was in the saddle, FDR had signed the Social Security Act and another national election was coming up.

Jan. 3 President Roosevelt reaffirms backing of drastic neutrality law.

6 A. A. A. crop control program declared unconstitutional by the Supreme Court.

15 Japanese withdraw from naval conference at London.

20 King George V, of England, dies at 70; Prince of Wales, 41, succeeds to the throne as Edward VIII.

27 Bonus bill becomes law after seventeen years of wrangling.

Feb. 17 Tennessee Valley Authority's power program upheld by Supreme Court.

25 Army seizes power in Japan; Tokyo under martial law; five cabinet ministers slain.

Mar. 1 10,000 Ethiopians slain, two armies routed.

7 Hitler sends German troops into the Rhineland, defying treaty at Versailles; scraps Locarno pact.

8 Italians halt war in Ethiopia to discuss peace.

10 France and Belgium insist on military sanctions against Germany.

29 Hitler receives 98.79 percent vote in German elections.

31 Japanese troops invade Mongolia; Russians angry.

April 3 Bruno Richard Hauptmann electrocuted in Trenton, New Jersey.

7 Great Britain gives League evidence Italy is using poison gas in Ethiopia.

May 5 Italian army occupies Addis Ababa; war is over.

9 Dirigible Hindenburg, starting round-trip flights to the United States from Germany, lands in Lakehurst, New Jersey, 61 and a half hours after take-off.

18 Guffey Coal Act found constitutional by Supreme Court.

June 4 500,000 strikers are out as Leon Blum's Socialist government, France's first, takes office.

11 Alf M. Landon, of Kansas, nominated for President by Republican Convention at Cleveland.

27 Franklin D. Roosevelt is renominated for President.

July 1 League of Nations powers refuse to recognize Italian conquest of Ethiopia.

20 Civil war sweeps Spain; Barcelona and Seville are bombed.

Aug. 5 Premier General John Metaxas declares dictatorship in Greece under King George II.

12 Germany agrees to non-intervention in Spain.

Sept. 25 France devaluates the franc in accord with the United States and Great Britain.

Oct. 3 France slashes its tariffs from 15 to 20 percent in bid for world trade.

14 Belgium renounces French alliance.

25 Italy and Germany sign Rome-Berlin Axis.

Nov. 3 President Roosevelt, Governor Herbert H. Lehman, of New York win election in sweeping Democratic victories throughout nation.

18 Italy and Germany recognize Franco's regime in Spain.

25 Japan signs Anti-Comintern Treaty with Germany.

Dec. 10 George VI King of England as Edward VIII abdicates to wed Mrs. Simpson. Next day he leaves England as Duke of Windsor, following "Woman I Love" speech.

15 Twenty-one American republics sign neutrality pact.

25 Generalissimo Chiang Kai-shek, dictator of China, is released thirteen days after being kidnapped by forces of Marshal Chang, former war lord, in mutiny.

DIED: John F. Hylan, 67, Jan. 12; Rudyard Kipling, 70, Jan. 18; Charles Curtis, 76, Feb. 8; Finley Peter Dunne, 68, Apr. 24; Speaker Joseph W. Byrns, June 4; Gilbert F. Chesterton, 62, June 14; Admiral William S. Sims, 77, Sept. 28; Jesse I. Straus, 64, Oct. 4; Sen. James Couzens, 64, Oct. 22; Mme. Ernestine Schumann-Heink, 75, Nov. 17; Arthur Brisbane, 72, Dec. 2.

1937 Now Spain was a battleground of weapons and clashing ideas. The Dictators had become a clustering team and there was no one to call their bluff. In Moscow the Kremlin produced a fantastic purge of traitors and weaklings and confused Bolsheviks.

In the U. S. Franklin Roosevelt was about to begin his second term after brushing off the Landon challenge. The Republican Party's representation in Congress had dwindled to a handful. A confident FDR was about to launch his scheme against the 'Nine Old Men' on the U. S. Supreme Court.

Jan. 2 Britain signs pact with Italy in effort to split Duce from Hitler.
4 10,000 Italian troops land in Spain.

20 Howard Hughes crosses U. S. in 7 hours, 30 minutes.

Roosevelt takes oath for 2nd Term; pledges end to poverty.

23 17 Moscow defendants confess they helped Trotsky plan to undermine Soviet.

30 Hitler scraps Versailles war guilt clause.

Feb. 2 Sit-down strikers at Flint defy Court order.

5 Roosevelt asks power to enlarge Supreme Court to 15 Justices; new appointments would offset elderly members who refuse to retire.

23 1,400 Ethiopians executed for attack on Gen. Rodolfo Graziani.

26 J. S. Farnsworth, ex-Navy officer, convicted of conspiracy to sell navy secrets to Japs.

Mar. 1 Steel plants raise wages to \$5 per day; grant 40-hour week.

18 450 pupils die in Texas school explosion.

22 Hughes, Brandels, Vandevanter oppose extra Justices as impairing Court's efficiency.

30 Supreme Court backs minimum pay act.

April 12 Supreme Court upholds Wagner Act.

26 Survey reveals jobs at 1929 level.

30 Franco battleship sunk by Loyalist plane, 700 drown.

May 6 Italy and Germany agree to help Franco fight on, and attack Madrid anew.

7 Hindenburg explodes at Lakehurst; 36 die as world's largest dirigible falls in flames.

12 George VI crowned in London.

19 Senate committee rejects Roosevelt Court plan, 10-8; Vandevanter, 78, resigns.

23 John D. Rockefeller dies at 97; gave away \$700,000,000.

24 Social Security upheld by Supreme Court.

25 A. F. of L. declares war on C. I. O.

26 Steelworkers strike.

28 Neville Chamberlain becomes Prime Minister of Britain, succeeding Baldwin.

June 3 Duke of Windsor, former Edward VIII, weds Wallis Warfield Simpson.

22 Joe Louis wins heavyweight title, knocking out James J. Braddock.

July 2 Amelia Earhart Putnam missing in Pacific in round-the-world flight; Navy ships and planes in search.

14 Sen. Joseph T. Robinson, leader of Roosevelt Court fight, dies at 64.

22 Senate defeats Court plan, burying it in committee by 70 to 20.

24 Alabama frees 5 of 9 Scottsboro defendants.

30 Tientsin set afire by Jap planes.

Aug. 1 Japs thrust south toward Nanking to widen "incident war"; Central China in panic.

12 Senator Hugo Black named to Supreme Court.

15 863 die as Chinese planes bomb Shanghai.

17 Black confirmed; Senate rejects rumors of Senator's Klan affiliations.

23 Japs land at Shanghai; 250 killed as shell explodes in international quarter.

Nov. 29 Britain and France agree to give Hitler colonies in exchange for peace.

Dec. 10 Japanese attack, sack Nanking.

11 Italy quits League over Ethiopia.

13 U. S. gunboat *Panay* sunk by Jap planes.

16 Tokyo apologizes for *Panay*, ousts air chief.

19 Russia executes 8 more officials for treason.

Erich von Ludendorff, last German war lord dies.

21 Roosevelt bars "isolation"; doesn't want 'peace at any price.'

25 U. S. accepts Tokyo apology on *Panay*.

DIED: Martin Johnson, Jan. 13; Jean Harlow, June 7; Sen. Jos. T. Robinson, July 14; Andrew Mellon, Aug. 26; Newton D. Baker, Dec. 25.

1938 The Stock Market sagged and slumped, industry was again in the doldrums. Roosevelt blamed a business recession. "Pump Priming" was the word in Washington, where they talked of fresh billions to get things moving again.

The President was working on a plan for an enlarged Navy. The program sounded logical, for in Europe the machinery of war gathered momentum ominously, while the democratic nations fumed and hesitated. Hitler's troops were poised for Austria; the stage was set for Munich.

Jan. 19 Franco air raids kill 700 in Barcelona and Valencia.

28 Roosevelt asks billion dollars for "two-ocean Navy."

Feb. 5 Hitler seizes army control; Ribbentrop becomes Foreign Minister.

16 Austria, yielding to Hitler's threat, puts Nazis in cabinet.

21 Hitler defies foes, says Nazis seek colonies, Pan-German unity.

Anthony Eden resigns as British Foreign Minister, charging Chamberlain seeks to "buy peace."

22 Commons approves Chamberlain policy.

Mar. 4 Rev. Martin Niemoller imprisoned by Nazis.

8 Richard Whitney & Co. bankrupt, suspends; Whitney indicted for grand larceny.

12 Hitler strikes in Austria; Nazis seize government as army moves in.

18 Mexico expropriates foreign oil interests.

29 U. S. protests Mexican oil seizures.

April 4 Loyalist Spain severed as Rebels cut sea road.

11 Austrians vote 99.75 percent for Anschluss.

16 Britain and Italy sign pact to maintain peace.

May 2 Hitler in Rome, pledges amity with Duce.

9 League yields, allowing France and Britain to recognize Italy's conquest in Ethiopia.

June 15 Wage-Hour Bill enacted.

17 France votes universal conscription in wartime.

20 France closes frontier, halting aid to Loyalists.

23 Germany puts entire nation under forced labor.

July 4 50,000 jailed in Austria during 3½ months of Nazi terror.

9 14 Jews, 44 Arabs, dead in Palestine riots.

12 Howard Hughes flies around the world in 3 days, 19 hours, 14 minutes (record).

18 Douglas Corrigan lands in Ireland in "wrong-way" flight.

Aug. 1 Japanese and Russians in border skirmish.

3 Mexico rejects U. S. protest, cites U. S. New Deal to justify oil seizures.

11 Russian-Japanese truce.

Sept. 1 Hitler demands autonomy for Sudeten Germans.

5 Prague yields to Nazi pressure on nearly all German demands.

10 Hitler and Goering promise protection to Sudeten Germans.

16 Britain and France, after parley, urge Czechs to surrender Sudetenland.

26 Roosevelt appeals to Hitler and Czechs for peaceful settlement of problems.

30 Britain, France, Italy, Germany in parley at Munich agree to dismemberment of Czechoslovakia. Chamberlain returns to cheering London crowds with "peace in our time."

Oct. 1 Nazi troops cross Czech border; Czechs yield to Polish demand for Teschen.

3 Hitler makes triumphant entry in Sudetenland, and—

5 forces Britain and France to yield more Czech territory.

30 "Attack from Mars" in radio sketch by Orson Welles causes widespread panic.

Nov. 2 Hungary gets slice of Czechoslovakia, too.

10 Assassination of German envoy in Paris by Herschel Grynszpan looses Nazi wrath at Jews over all Reich; Jews herded into camps, fined \$400,000,000.

Mexico agrees to pay for oil and land seizures.

13 Mother Cabrini first American to be beatified in Vatican.

18 Hitler recalls German Ambassador from U. S. in protest against Roosevelt statement.

23 Jews in Germany fined 20 percent of all property.

Dec. 7 French, German peace pact signed.

DIED: Benj. N. Cardozo, July 9; Samuel Insull, 78, July 16; Cardinal Hayes 70, Sept. 4.

1939 After Munich (Sept. 30, 1938) a murky twilight settled over the world; a time of uneasiness and fear. Britain armed feverishly, the U. S. stepped up plane production. The cause of the Spanish Loyalists disintegrated. Bundists, American Firsters and Communists grew hoarse denouncing war-mongers. Congress stood firm for neutrality.

New York was excited about a World's Fair—the World of Tomorrow. While the assorted glamour and gadgets of this bright glimpse of the future were assembling on Flushing Meadow, a very different world was being shaped by forces unashed in Europe. It was not the World of Tomorrow we expected. In its vast changes, economic and political upheavals, waste and tumult and pain, it was to surpass the most extravagant forecasts.

Jan. 4 President Roosevelt calls for extensive defense program.

5 Felix Frankfurter named to Supreme Court.

7 Tom Mooney pardoned.

20 Hitler removes Hjalmar H. G. Schacht; appoints Walther Funk to head Reichsbank.

25 80,000 dead in Chilean earthquake; cities wrecked, destruction in 6 provinces.

26 Barcelona yields; Loyalists flee to North, Franco in pursuit.

30 Hitler pledges aid to Italy in war, calls for colonies, foreign trade, and denounces "defamation in U. S."

Feb. 10 Pope Pius XI dies at 81 after seventeen years' reign.

13 Justice Louis D. Brandeis retires at 82.

18 Golden Gate International Exposition opens in San Francisco.

20 Dorothy Thompson ejected by Bundists in tumultuous rally at New York's Madison Square Garden.

27 Franco officially recognized by France and England.

Sit-down strikes outlawed by Supreme Court.

Mar. 2 Eugenio Cardinal Pacelli elected Pope in third ballot; becomes Pius XII.

14 Hitler orders Slovakia to decide on complete break from Prague rule; Britain and France decline to interfere.

15 Hitler takes Czechs "under protection." Republic breaks up; Hungary and Rumania march in also.

16 Hungary annexes Carpatho-Ukraine.

22 Hitler and troops enter Memel, which is annexed to Reich.

23 James J. Hines, Tammany leader gets 4-8 years for Harlem lottery graft.

28 Last nine of fifty-two Spanish provincial capitals surrender to insurgents.

28 Madrid falls to Franco as Loyalists yield on all fronts.

31 Britain and France pledge aid if Poland resists Nazi attack.

April 1 U. S. accords Franco full recognition.

7 Thomas J. Pendergast indicted by U. S. on income tax evasion.

Italian troops invade Albania; King Zog flees.

14 President Roosevelt vows to defend the United States' neighbors with arms and finances.

27 House of Commons authorizes conscription in Great Britain.

28 Hitler scraps war renunciation treaty with Poland and naval limitations pact with England. Demands Danzig, and rebuffs Roosevelt's peace plea.

30 500,000 attend New York World's Fair on opening day.

May 3 Litvinov retires as commissar of foreign affairs, Molotov succeeds him.

5 Poland refuses to yield Danzig or Corridor.

7 Military and political alliance between Germany and Italy announced.

11 Fighting begins between Japanese and Soviet troops on border southeast of Lake Bor.

17 Canada welcomes King and Queen of England.

22 Germany and Italy sign ten-year military pact.

23 Squalus, United States submarine, sinks in 240 feet of water off Portsmouth.

June 1 Townsend old-age pension plan defeated in House.

5 Supreme Court voids Frank Hague's ban on the C. I. O.

8 President Roosevelt and King George pledge friendship at state dinner in Washington.

13 Heinrich Himmler sent to crush Czech unrest.

- 19 Nazi liner *Columbus* scuttled to escape capture.
- 23 Roosevelt names Myron C. Taylor as peace envoy to Pope Pius XII.
- 28 Pope Pius XII returns King Victor Emmanuel's visit to the Vatican; first papal visit to Quirinal in more than seventy years.
- 29 Harry Bridges, west coast labor leader, ruled not a Communist.
- DIED: Jacob Ruppert, 71, Jan. 13; Pius XI, 81, Feb. 10; Ralph Pulitzer, June 14; Claude Swanson, July 7; Lawrence Gilman, 61, Sept. 9; Cardinal Mundelein, Oct. 2; Pierce Butler, 73, Nov. 16.

940 After the blitz in Poland—stalemate, boredom. It seemed a phony war. The French army copped behind the Maginot Line; German tank gangs poured concrete along the Westwall. In London the war correspondents in their new uniforms talked it over like critics at a play; found it dull.

In the U. S. they were playing the "Star-bangled Banner" in the theaters ("Life with Father" had just opened) and people grew misty-eyed when Kate Smith sang "God Bless America!" Wendell L. Willkie was about to write a short piece on national affairs called "We, the People." A new force was rising to challenge U. S. complacency, disturb the apathy of the American people.

Jan. 3 F.D.R. asks wartime powers, urges higher taxes for defense.

12 Navy's 5-year program calls for 150 ships costing \$2,500,000,000.

15 F. B. I. seizes eighteen persons in fantastic plot to seize the government.

22 Earl Browder gets 4 years for passport fraud.

Feb. 15 J. P. Morgan & Co. abandons private banking; becomes public corporation.

1941 This was the winter of the long blitz. The Luftwaffe rained bombs methodically on England. The Nazi war machine had rolled through the Balkans and was pushing across the rim of North Africa toward Suez, threatening the British life line. Lend-lease was about to begin, over the bitter protests of isolationists. Already plants were expanding. The cry was for machine tools, aluminum, mechanics. While Selective Service took the youngsters, the able-bodied, the unmarried, industry's demands started a feverish migration from farms and towns to San Diego, Hartford, Paterson, Seattle, Kansas City, Detroit, Bridgeport. The "Arsenal of Democracy" was beginning its gigantic task. The training of the first raw conscripts had started. In newly staked-out Army camps thousands of wooden barracks and mess halls rose to the clatter of hammer and saw.

Jan. 1 ASCAP strike bars most U. S. music from air.

5 British take 25,000 Italian prisoners in North Africa.

7 William S. Knudsen and Sidney Hillman named U. S. defense production heads with equal powers.

- DIED: Amy Mollison, 32, Jan. 6; Kenneth F. Simpson, Jan. 24; Gen. John Metaxas, 69, Jan. 29; Sir Frederick K. G. Banting, Feb. 23; Former King Alfonso, Feb. 28; Lawrence Hills, Mar. 28; Virginia Woolf, April 2; August Hecksher, 92, April 26; Lou Gehrig, 37, June 2; Arthur Curtiss James, 74, June 4; Ex-Kaiser Wilhelm, June 4; Senator Pat Harrison, 59, June 22; Ignace Jan Paderewski, 80, June 29; Mrs. James Roosevelt, 86, Sept. 6; Louis D. Brandeis, 84, Oct. 5; Simon Guggenheim, 73, Nov. 2.

1942 Those little Japanese, they must be crazy! So we mumbled and fumed that Sunday afternoon. They were crazy, but they had sunk half our fleet (except the carriers), crippled a great naval base, reduced our Pacific sea power dangerously. They had driven us to panic, then into rage and confusion. We shook that off. We were in it now, up to our ears. The confusion cleared. The carping clamor of the isolationists died out—to be followed almost immediately by a shrill Communist clamor for a second front.

Russia was in desperate straits that winter. The war tempo came to America. Blackouts, air-raid wardens, civilian defense, censorship, draft boards, ration books, Knudsen-Hillman. No more automobiles. Already our planes were streaming into English airfields; shiploads of trucks and tanks were unloading on the Persian Gulf for transit to Russia. We were in Iceland, Bermuda, on the shoulder of South America. We were in it—for keeps.

Jan. 2 MacArthur gives up Manila; fights on for Bataan, Corregidor.

13 Donald Nelson made war production chief.

16 Carole Lombard killed in plane crash during cross-country tour for Victory Loan drive.

28 U. S. troops land in North Ireland.

7 Pearl Harbor anniversary observed throughout U. S. with solemn pledges for victory.

14 MacArthur takes Buna, New Guinea.

19 British invade Burma.

25 Darlan, French turncoat and civilian administrator in Africa, assassinated.

DIED: Carole Lombard, Jan. 16; Brig. Gen. Cornelius Vanderbilt, 68, March 1; John Barrymore, 60, May 29.

1943 The war maps showed a U. S. Army pushing the Nazis back in Tunis; Rommel's Afrika Korps streaming through Tripoli in retreat. American men, tanks and planes were in action at last.

MacArthur had stopped the Japs on New Guinea, was building a base in Australia. Our Navy had rallied in the Pacific and was getting ready to take the offensive. At home the shrill outcry for a second front mingled with the drive to sell war bonds, scrap metal drives. Beneath these surface excitations was the steady roar of machinery, the surge and thunder of blast furnaces and rolling mills. The blueprint stage was past. We were making the stuff.

Eighteen miles northwest of Knoxville that winter, woodsmen were clearing a Tennessee hillside. A building operation was about to begin, Manhattan Project, at Oak Ridge, something connected with science, and the war.

- Jan. 11 F. D. R. calls for \$100 billions for war.

 Marines land on Cape Gloucester, New Britain.

DIED: George Washington Carver, Jan. 5; Carlo Tresca, Jan. 11; Alexander Woollcott, Jan. 23; J. P. Morgan, 75, March 13; Leslie Howard, June 2; Mrs. William Brown Meloney, June 23.

1944 Through the big staging depots behind the seaport cities endless streams of men moved toward the docks. Trainloads, busloads; unburned, hardened soldiers loaded with gear, men of college age, weaned from family and home; tough, casual young Americans on their way to war.

Railway stations and bus terminals edited with hurrying, uniformed figures. Broadway and Main Street were overrun. War had reached concert pitch. England bulged with uniformed men, fighter and bomber pilots, tanks, trucks, matériel. Ships in great sprawling convoys were moving across the Atlantic; tankers, troopships, supply ships, ammunition ships, LST's, LCI's, assembling around the rim of the British Isles for D-Day.

In the Pacific, Task Force 58 with its new fast Essex class carriers was ranging from the Solomons to the Gilberts and Marshalls. The Navy was about to begin its swift relentless conquest of the Pacific stepping stones to Japan.

DIED: Count Galeazzo Ciano, Jan. 11; William T. Dewart, 68, Jan. 27; William Allen White, 75, Jan. 29; Sen. Charles L. McNary, Feb. 25; Irvin S. Cobb, 67, March 10; William Cardinal O'Connell, 84, April 22; Frank Knox, 70, April 28; Norman H. Davis, July 2; Lt. Gen. Leslie J. McNair, July 27; Manuel Quezon, Aug. 1; Al Smith, Oct. 5; Wendell L. Willkie, 52, Oct. 7; Archbishop of Canterbury, 63, Oct. 26; Charles Dana Gibson, 77, Dec. 23.

1945 It was mostly downhill now. The great American war potential had delivered the goods. America's industrial strength, translated into tanks, trucks, planes, jeeps, was closing in on Germany. The Battle of the Bulge was the Nazis' last desperate stroke and it didn't quite come off. Along the Pacific seaboard, Navy convoys were loading for Iwo and Okinawa. From newly captured Saipan and Tinian B-29's were pounding Japan's industrial centers to rubble. The war had come to its last decisive phase. Here at home the nation churned with ultimate activity. Everyone had a job, everyone had money. Hotels, night clubs, theaters, roadhouses, juke joints reflected the tension and hysteria. Victory was in the air.

- Jan.** 9 General Douglas MacArthur lands invasion force in Lingayen Gulf, Luzon, wins 15-mile beachhead.
- 12 German line crumbles, Allies regain 100 square miles in "Bulge."
- 17 Russians take Warsaw by encirclement.

- 18 Twenty-four Nazi ringleaders indicted as war criminals.
- 23 President Truman calls for universal military training for U. S. youth in peacetime.
- 30 Getulio Vargas resigns as President of Brazil after 15-year regime.
- Nov. 6 O'Dwyer elected Mayor of N. Y.; Tammany back after 12 years.
- 15 Truman, Attlee, King decide in Washington conference that atom bomb secrets will not be shared until United Nations devise firm control plan.
- 20 General Motors strike called 200,000 out.
- Dec. 12 Truman names fact-finding board in General Motors strike.
- 15 Prince Fumimaro Konoye, three times premier of Japan, commits suicide rather than face trial.
- 16 Truman names Secretary Byrnes, Stettinius, Senator Tom Connally, and Mrs. Eleanor Roosevelt delegates to the United Nations.
- 21 Gen. George S. Patton, Jr. dies of injuries in motor accident.
Archbishop Francis J. Spellman, three others in U. S. among 32 named Cardinals by Pope.
- 27 Big Three agree on Atomic Energy Commission for United Nations.
- DIED: Thomas J. Pendergast, 72, Jan. 26; David Lloyd George, 82, March 26; Sen. Hiram W. Johnson, Aug. 5; Admiral John S. McCain, 61, Sept. 5; Judge Irving Lehman, 69, Sept. 21; Jerome Kern, 60, Nov. 11.

1946 The first full year of peace. Peace? Labor fought capital in the U. S. as never before—four and a half million men were involved in strikes. Congress and President Truman fought over price controls. Results: prices zoomed. You could pay \$2.75 for one hamburger at a restaurant, or \$17.50 for one shirt. Peace? You should have heard what the Republicans called the Democrats. The Republicans won Congress. Peace? Interminable wrangling among the Big Four victors. Finally they grudgingly agreed on compromise peace treaties, but only for the small-fry enemies, not for Germany or Japan. And the shaky walls of the young United Nations edifice were almost knocked down by the quarrels between Russia and the Western nations. A total of 11,000 divorces was granted in Reno—an all-time record. The U. S. nonfiction best seller was "Peace of Mind."

Jan. 3 William Joyce ("Lord Haw-Haw" on German radio) is hanged in London as traitor.

7 American occupation troops hold mass demonstrations saying they "wanna go home"; demonstrations spread to India, Korea, Japan, Philippines, France, Germany.

10 U. S. Army hits the moon with radar impulses.

General Assembly of the United Nations meets first time in London.

15 200,000 C. I. O. electrical workers strike.

17 United Nations Security Council meets for the first time in London.

20 800,000 steel workers strike.

General Charles de Gaulle resigns as President of France.

21 Truman warns of inflation and subsequent depression.

24 U. N. General Assembly creates Atomic Energy Commission.

25 John L. Lewis and his United Mine Workers rejoin American Federation of Labor, which they had bolted in 1936.

Feb. 12 State Department accuses Perón regime in Argentina of helping Nazis plot conquest in South America.

13 Ickes, Secretary of the Interior for thirteen years, resigns in anger.

24 Argentina elects Perón President.

Mar. 1 Bank of England goes under government ownership.

4 England, France and U. S. publish documents showing Franco's collaboration with Axis, and call on the Spanish people to overthrow him.

6 Japan drafts new constitution abolishing army, navy, air force forever, making war unconstitutional.

13 Soviet troops evacuate Manchuria stripping factories.

April 2 U. S. civilian production at highest level—\$150,000,000,000 a year.

3 Firing squad executes Lt. Gen. Masaharu Homma, who ordered Bataan Death March.

18 League of Nations meets for last time in Geneva, to put itself out of existence.

25 Council of foreign Ministers (Byrnes, Bevin, Molotov and Blum) meets in Paris to draw up peace treaties for Italy, Rumania, Hungary, Bulgaria and Finland.

29 U. S. proposes treaty with England, Russia and France to keep Germany disarmed twenty-five years.

May 9 King Victor Emmanuel III abdicates, hoping Italy's monarchy can be saved by his son, Humbert, who takes throne.

15 Truman seizes railroads in face of strike threat.

June 2 Italy votes to abolish monarchy.

3 Twenty-seven Japanese war leaders go on trial in Tokyo.

6 John Wesley Snyder named Secretary of Treasury; Fred M. Vinson Chief Justice.

11 Truman vetoes Case Bill restricting strikes.

29 Truman vetoes price control bill letting O. P. A. expire; but hopes Congress will extend the present law. Congress does not. O. P. A. expires.

British arrest 2,718 Jews in Palestine, trying to round up terrorists.

July 1 Army bomber drops atom bomb in first test at Bikini Atoll. Eleven outmoded ships are destroyed.

4 U. S. grants Philippines independence.

5-31 Thousands of Jews flee in terror from Poland after July 4 pogrom at Kielce.

10 Government says prices have risen 16 percent in two weeks.

13 Congress approves \$3,750,000,000 loan to England.

15 Yugoslavia condemns General M. Hallovitch to be shot.

16 Isolationist Senator Burton Wheeler beaten for Democratic nomination in Montana after twenty-four years in Senate.

- 25 Second atom bomb is tested at Bikini, exploded under water; battleship, aircraft carrier and eight other craft sent to bottom. O. P. A. is revived after lapse of twenty-five days as Congress passes new bill.
- 26 Congress puts U. S. atom control in hands of civilian board.
- 29 Twenty-one nations assemble in Paris to discuss peace treaties with Italy, Bulgaria, Rumania, Hungary and Finland. Treaties had been prepared by Big Four Council of Foreign Ministers, with some points still in dispute.
England accepts American proposal to merge occupation zones in Germany.
- 13 Russia demands from Turkey a share in the military control of the Dardenelles.
La Follette dynasty in Wisconsin is overthrown when Republicans fail to renominate Sen. Robert M. La Follette.
- 19 Yugoslavs shoot down U. S. Army transport plane flying over a corner of Yugoslavia; all aboard die.
- 1 Greece votes to bring back King George II, in exile in London since Germans overran Greece.
- 2 First all-Indian government inaugurated; Jawaharlal Nehru heads Cabinet.
- 8 Nine-year-old King Simeon II of Bulgaria loses his throne as nation votes to abolish monarchy.
- 20 Truman fires Henry Wallace from the Cabinet.
- 24 Stalin says he sees no real danger of war with U. S. and Britain.
- 1 Eleven top Nazis sentenced to die by Nuremberg tribunal; seven sent to prison; three acquitted.
The Truculent Turtle, Navy plane, sets nonstop distance record, flying 11,236 miles from Perth, Australia, to Columbus, Ohio, in 55 hours, 15 minutes.
- 12 Henry Wallace becomes editor of "The New Republic" magazine.
- 13 France adopts a new constitution, by narrow margin of 1,000,000 votes, despite De Gaulle's opposition.
- 15 Paris Peace Conference adjourns; disputed points will go back to Council of Foreign Ministers for final decision.
- 16 Goering kills himself with cyanide of potassium a few hours before ten other Nazis are executed at Nuremberg.
- 21 Russia seizes thousands of skilled German workers, deports them to Russia to work there.
- Nov. 4 British disclose that Hindu-Muslim riots in India have cost 5,081 lives in the last four months.
- 5 Republican landslide overturns Democratic control of Senate and House.
- 6 U. S. will put Japanese Pacific islands under United Nations trusteeship.
- 9 Truman ends all price and wage controls, except on rents, sugar and rice, effective Nov. 11.
- 12 Dutch end 15-month strife in Java by tentatively recognizing Indonesian Republic.
- 29 Judge Goldsborough puts John L. Lewis on trial for contempt of court for failing to call off coal strike.
- Dec. 7 Worst disaster of the year in U. S.—pre-dawn fire sweeps Winecoff Hotel in Atlanta, Ga., killing over 120.
- 12 U. N. accepts Rockefeller gift of permanent headquarters site in midtown New York City.
- 14 U. N. Assembly unanimously votes resolution for general disarmament.
- 30 U. N. Atomic Energy Commission accepts U. S. atom control plan, 10 to 0, Russia and Poland abstaining.
- DIED:** William T. Dewart, 36, Jan. 3; Harry Hopkins, 55, Jan. 29; E. Phillips Oppenheim, 79, Feb. 3; George Arliss, 77, Feb. 5; Phillip Merivale, 59, Mar. 13; Noah Beery, Sr., 63, April 1; Vincent Youmans, 47, April 5; Lord Keynes, 62, April 21; Harlan Fiske Stone, 73, April 22; Booth Tarkington, 76, May 19; Joseph Medill Patterson, 67, May 26; Mikhail I. - ANDREWS, Roy Chapman (zoologist, explorer); b. Beloit, Wis., Jan. 26, 1884.
- ARMSTRONG, Edwin H. (engineer); b. New York City, Dec. 18, 1890.
- ASTON, Francis W. (physicist); b. Harborne, Eng., Sept. 1, 1877.
- BAADE, Walter (astronomer); b. Schroet- inghausen, Ger., Mar. 24, 1893.
- BANTA, Arthur M. (zoologist); b. nr. Greenwood, Ind., Dec. 31, 1877.
- BEEBE, William (zoologist); b. Brooklyn, N. Y., July 29, 1877.
- BERGIUS, Friedrich K. R. (chemist); b. Goldschmieden, Silesia, Oct. 11, 1884.
- BLODGETT, Katharine B. (physicist); b. Schenectady, N. Y., Jan. 10, 1898.
- BOHR, Niels (physicist); b. Copenhagen, Den., Oct. 7, 1885.
- Bragg, Sir William L. (physicist); b. Adelaide, Austr., Mar. 31, 1890.
- BUSH, Vannevar (engineer); b. Everett, Mass., Mar. 11, 1890.

- BYRD, Richard E. (explorer); b. Winchester, Va., Oct. 25, 1888.
- CHADWICK, James (physicist); b. England, Oct. 29, 1891.
- COLE, Rufus (physician); b. Rowsburg, Ohio, Apr. 30, 1872.
- COMPTON, Arthur H. (physicist); b. Wooster, Ohio, Sept. 10, 1892.
- COMPTON, Karl T. (physicist); b. Wooster, Ohio, Sept. 14, 1887.
- COOLIDGE, William D. (physical chemist); b. Hudson, Mass., Oct. 23, 1873.
- COTTRELL, Frederick G. (chemist); b. Oakland, Calif., Jan. 10, 1877.
- CURIE JOLIOU, Frédéric (physicist); b. Paris, Fr., Mar. 19, 1900.
- CURIE JOLIOU, Irène (physicist); b. France, 1897.
- DAVISSON, Clinton J. (physicist); b. Bloomington, Ill., Oct. 22, 1881.
- DE BROGLIE, Louis Victor (physicist); b. Dieppe, Fr., Aug. 15, 1892.
- DE KRUIF, Paul (science writer); b. Zeeland, Mich., Mar. 2, 1890.
- DIRAC, Paul A. M. (physicist); b. Bristol, Eng., Aug. 8, 1902.
- DOISY, Edward A. (biochemist); b. Hume, Ill., Nov. 13, 1893.
- DUNNING, John R. (physicist); b. Shelby, Nebr., Sept. 24, 1907.
- EINSTEIN, Albert (physicist); b. Ulm, Ger., Mar. 14, 1879.
- ELLSWORTH, Lincoln (explorer, engineer); b. Chicago, Ill., May 12, 1880.
- ERLANGER, Joseph (physiologist); b. San Francisco, Calif., Jan. 5, 1874.
- EVANS, Herbert M. (anatomist); b. Modesto, Calif., Sept. 23, 1882.
- FERMI, Enrico (physicist); b. Rome, It., Sept. 29, 1901.
- FLEMING, Alexander (bacteriologist); b. Lochfield, Eng.
- HAHN, Otta (physical chemist); b. Frankfurt on Main, Ger., Mar. 8, 1879.
- HALDANE, John B. S. (geneticist); b. England, Nov. 5, 1892.
- HEISENBERG, Werner (physicist); b. Germany, Dec. 5, 1901.
- HEISER, Victor G. (hygienist); b. Johnstown, Pa., Feb. 5, 1873.
- HOGBEN, Lancelot (biologist); b. Southsea, Eng., Dec. 9, 1895.
- HOOTON, Earnest A. (anthropologist); b. Clemansville, Wis., Nov. 20, 1887.
- HUBBARD, Father Bernard R. (geologist, explorer); b. San Francisco, Calif., Nov. 24, 1888.
- HUBBLE, Edwin P. (astronomer); b. Marshfield, Mo., Nov. 20, 1889.
- HUNTINGTON, Ellsworth (geographer); b. Galesburg, Ill., Sept. 16, 1876.
- HUXLEY, Julian S. (biologist); b. England, June 22, 1887.
- JUNG, Carl G. (psychiatrist); b. Basel, Switz., July 26, 1875.
- KAPITZA, Peter L. (physicist); b. Kronstadt, Rus., July 8, 1894.
- KETTERING, Charles F. (engineer); b. nr. Loudonville, Ohio, Aug. 29, 1876.
- LANGMUIR, Irving (chemist); b. Brooklyn, N. Y., Jan. 31, 1881.
- LAWRENCE, Ernest O. (physicist); b. Canton, S. Dak., Aug. 8, 1901.
- MACNIDER, William (pharmacologist); b. Chapel Hill, N. C., June 25, 1881.
- MAYO, Charles W. (surgeon); b. Rochester, Minn., July 28, 1898.
- MEITNER, Lise (physicist); b. Vienna, Aus., Nov. 7, 1878.
- MENNINGER, William C. (psychiatrist); b. Topeka, Kans., Oct. 15, 1899.
- MILLIKAN, Robert A. (physicist); b. Morrison, Ill., Mar. 22, 1868.
- MINOT, George R. (physician); b. Boston, Mass., Dec. 2, 1885.
- MURPHY, William P. (physician); b. Stoughton, Wis., Feb. 6, 1892.
- NORDEN, Carl L. (inventor); b. Semarang, Java, Apr. 23, 1880.
- OPPENHEIMER, J. Robert (physicist); b. New York City, Apr. 22, 1904.
- PAINTER, Theophilus S. (zoologist); b. Salem, Va., Aug. 22, 1889.
- PARRAN, Thomas (surgeon); b. St. Leonard, Md., Sept. 28, 1892.
- PICCARD, Auguste (physicist); b. Basel, Switz., Jan. 28, 1884.
- RABI, Isidor I. (physicist); b. Austria, July 29, 1898.
- RUSSELL, Henry N. (astronomer); b. Oyster Bay, N. Y., Oct. 25, 1877.
- SABIN, Florence R. (anatomist); b. Central City, Colo., Nov. 9, 1871.
- SHAPLEY, Harlow (astronomer); b. Nashville, Mo., Nov. 2, 1885.
- SIEGBAHN, Karl M. G. (physicist); b. Örebro, Swed., Dec. 3, 1886.
- STEENBOCK, Harry (biochemist); b. Charlestown, Wis., Aug. 16, 1886.
- STEFANSSON, Vilhjalmur (explorer); b. Arnes, Can., Nov. 3, 1879.
- TOLMAN, Richard C. (physicist); b. West Newton, Mass., Mar., 4, 1881.
- UREY, Harold C. (chemist); b. Walkerton, Ind., Apr. 29, 1893.
- WAKSMAN, Selman A. (microbiologist); b. Priluki, Rus., July 2, 1888.
- WHIPPLE, George H. (pathologist); b. Ashland, N. H., Aug. 28, 1878.
- ZWORYKIN, Vladimir K. (physicist); b. Mourom, Rus., July 30, 1889.

Leading National Associations and Societies in the United States

(Listed by name, address, year of founding (in parentheses), number of membership and name and title of executive.)

- ADVERTISING AGENCIES**, American Assn. of, 420 Lexington Ave., N. Y. 17, (1917), 204 agencies, Frederic R. Gamble, Pres.
- ADVERTISING FEDERATION of America**, 330 W. 42 St., N. Y. 18, (1905), 15,000, Elon G. Borton, Pres.
- ADULT EDUCATION**, American Assn. for, 525 W. 120 St., N. Y. 27, (1926), 3,000, Morse D. Cartwright, Dir.
- AERONAUTICAL SCIENCES**, Inst. of the, 2 E. 64 St., N. Y. 21, (1932), 6,687 professional members, 2,217 students, S. Paul Johnston, Dir.
- ACCOUNTANTS**, American Inst. of, 13 E. 41 St., N. Y. 17, (1887), 11,000, George D. Bailey, Pres.
- AMERICAN REVOLUTION**, Natl. Society of the Daughters of, 1720 D St. NW, Washington 6, (1890), 158,029, Mrs. Roscoe C. O'Bryne, Pres.
- AMERICAN REVOLUTION**, Natl. Society of the Sons of, 1227 16 St. NW, Washington 6, (1889), 18,000, A. Herbert Foreman, Pres.
- ANIMALS**, American Society for Prevention of Cruelty to (ASPCA), 50 Madison Ave., N. Y. 10, (1866), 6,000, Sydney H. Coleman, Exec. V. P.
- ARCHITECTS**, American Inst. of, 1741 N. Y. Ave. NW, Washington 6, (1857), 7,200, Edward C. Kemper, Exec. Dir.
- ARTS AND LETTERS**, American Academy of, 633 W. 155 St., N. Y. 32, (1904), limited to 50, Dr. Walter Damrosch, Pres.
- ARTS AND LETTERS**, Natl. Inst. of, 633 W. 155 St., N. Y. 32, (1898), limited to 250, Douglas Moore, Pres.
- ARTS AND SCIENCE**, American Academy of, 26 Newbury St., Boston 16, (1780), 938, Howard Mumford Jones, Pres.
- ASSOCIATED PRESS (AP)**, 50 Rockefeller Plaza, N. Y. 20, (1848), 1,700 newspapers, 450 radio stations, K. Cooper, Exec. Dir.
- ASTRONOMICAL Society**, American, Dearborn Observatory, Northwestern Univ., Evanston, Ill., (1897), 625, Dr. C. M. Huffer, Sec.
- AUDUBON Society**, Natl., 1006 Fifth Ave., N. Y. 28, (1905), 10,200, John H. Baker, Pres.
- AUTHOR'S LEAGUE of America**, 6 E. 39 St., N. Y. 16, (1912), 7,700, Louise Silcox, Exec. Sec.
- AUTOMOBILE Assn.**, American, Pennsylvania Ave. at 17 St. NW, Washington 6, (1902), 2,300,000, Robert J. Schmunk, Pres.
- AUTOMOTIVE ENGINEERS**, Society of, 29 W. 39 St., N. Y. 18, (1905), 16,000, John A. C. Warner, Gen. Mgr.
- BACTERIOLOGISTS**, Society of American, 1335 H St. NW, Washington 5, (1899), 3,300, Dr. H. J. Conn, Pres.
- BANKERS Assn.**, American, 22 E. 40 St., N. Y. 16, (1875), 15,985 banks, Harold Stonier, Exec. Mgr.
- BAPTIST HOME MISSIONS Society**, American, 212 Fifth Ave., N. Y. 10, (1832), Rev. G. Titt Beers, Exec. Sec.
- BAPTIST YOUTH Fellowship**, 1703 Chestnut St., Philadelphia 3, 40,000, Dr. Oliver De Wolf Cummings, Pres.
- BAR Assn.**, American, 1140 North Dearborn St., Chicago 10, (1878), 41,000, Tappan Gregory, Pres.
- BETTER BUSINESS BUREAUS**, Assn. of, 405 Lexington Ave., N. Y. 17, (1921), 93 bureaus, Victor H. Nyborg, Pres.
- BIBLE Society**, American, Park Ave. and 57th St., N. Y. 22, (1816), Daniel Burke, Pres.
- BIG BROTHER Movement**, 207 Fourth Ave., N. Y. 3, (1909), 1,107 adults, 2,441 boys, Joseph H. McCoy, Gen. Sec.
- B'NAI B'RITH**, 1003 K St. NW, Washington 1, (1843), 325,000, Frank Goldman, Pres.
- BOOK PUBLISHERS Council**, Inc., American, 62 W. 47 St., N. Y. 19, (1946), 90 publishers, Harry F. West, Man. Dir.
- BOOKSELLERS Assn.**, American, 31 Madison Ave., N. Y. 10, (1900), 1,000, Gilbert E. Goodkind, Exec. Sec.
- BOY'S CLUB of America**, Inc., 381 Fourth Ave., N. Y. 16, (1860), 300 clubs, 275,000 individuals, D. W. Armstrong, Exec. Dir.
- BOY SCOUTS of America**, 2 Park Ave., N. Y. 16, (1910), 2,063,397 scouts, 50,323 troops, E. K. Fretwell, Chief Scout Exec.
- BROADCASTERS**, Natl. Assn. of, 1771 N St. NW, Washington 6, (1922), 1,464, Judge Justin Miller, Pres.
- BUSINESS AND PROFESSIONAL Women's Clubs**, Natl. Federation of, 1819 Broadway, N. Y. 23, (1919), 120,000 individuals, 2,000 clubs, Sally Butler, Pres.
- CALENDAR Assn.**, World, 630 Fifth Ave., N. Y. 20, (1930), 15,000, Elisabeth Achelis, Pres.
- CAMP FIRE GIRLS**, Inc., 88 Lexington Ave., N. Y. 16, (1910), 360,000, Martha F. Allen, Natl. Dir.
- CANCER**, American Society for Control of, 47 Beaver St., N. Y. 4, (1913), over 1,000,000 women volunteers, Dr. Edwin P. Lehman, Pres.
- CARE**, Inc., 50 Broad St., N. Y. 4, (1945), 28 agencies for distribution of food to Europeans, Paul C. French, Exec. Dir.

- CATHOLIC MEN**, Natl. Council of, 1312 Massachusetts Ave. NE, Washington 5, (1920), 4,000,000, John W. Babcock, Pres.
- CATHOLIC WAR VETERANS** of the U. S., 350 Fifth Ave., N. Y. 1, (1935), 400,000, Max H. Sorensen, Natl. Commander.
- CATHOLIC WELFARE** Conference, Natl., 1312 Massachusetts Ave. NW, Washington 5, (1919), 171 bishops, Most Rev. John T. McNicholas, Chmn.
- CATHOLIC WOMEN**, Natl. Council of, 1312 Mass. Ave. NW, Washington 5, (1920), 77 councils, Ruth Craven, Exec. Sec.
- CHAMBER OF COMMERCE** of the U. S. A., 1615 H St. NW, Washington 6, (1912), 2,740 associations, 18,349 firms and individuals, Earl O. Shreve, Pres.
- CHEMICAL ENGINEERS**, American Inst. of, 50 E. 41 St., N. Y. 17, (1908), 7,665, Dr. Charles M. A. Stine, Pres.
- CHEMICAL Society**, American, 1155 16 St. NW, Washington 6, (1876), 54,849, W. Albert Noyes, Jr., Pres.
- CHEMISTS**, American Inst. of, 60 E. 42 St., N. Y. 17, (1923), 2,500, F. D. Snell, Pres.
- CHILDREN'S AID Society**, The, 105 E. 22 St., N. Y. 10, (1853), 40,000 beneficiaries yearly, Arthur Huck, Exec. Dir.
- CHIROPRACTIC Assn.**, Natl., Natl. Bldg., Webster City, Iowa, (1932), 6,598.
- CHRISTIAN EDUCATION**, World Council of (formerly World's Sunday School Assn.), 156 Fifth Ave., N. Y. 10, (1889), 55 countries, Dr. F. L. Knapp, Gen. Sec.
- CHRISTIAN ENDEAVOR**, International Society of, 1201 East Broad St., Columbus 5, Ohio, (1881), 4,000,000, Rev. Ernest R. Bryan, Gen. Sec.
- CHRISTIANS AND JEWS**, Natl. Conference of, 381 Fourth Ave., N. Y. 16, (1928), Everett R. Clinchy, Pres.
- CHURCHES OF CHRIST** in America, Federal Council of, 297 Fourth Ave., N. Y. 10, (1908), 25 churches, Samuel McCrea Cavert, Gen. Sec.
- CIRCULATIONS**, Audit Bureau of, 165 West Wacker Drive, Chicago 1, (1914), 3,111, J. N. Shryock, Man. Dir.
- CIVIL ENGINEERS**, American Society of, 33 W. 39 St., N. Y. 18, (1852), 22,100, William N. Carey, Exec. Sec.
- CIVIL LIBERTIES Union**, American, 170 Fifth Ave., N. Y. 10, (1917), Roger N. Baldwin, Dir.
- COLLEGES**, Assn. of American, 19 W. 44 St., N. Y. 18, (1914), 640 colleges, Guy E. Snively, Exec. Dir.
- COLORED PEOPLE**, Natl. Assn. for Advancement of, 20 W. 40 St., N. Y. 18, (1909), 475,000, Walter White, Exec. Sec.
- COLONIAL DAMES** of America, Natl. Society of, 2715 Q St. NW, Washington 7, (1891), 12,300, Mrs. E. I. Low, Pres.
- COMPOSERS, AUTHORS AND PUBLISHERS**, American Society of (ASCAP), 30 Rockefeller Plaza, N. Y. 20, (1914), 2,173, Deems Taylor, Pres.
- CONFEDERACY**, United Daughters of the, 5330 Pershing Ave., St. Louis 12, Mo., (1894), 40,000, Mrs. L. E. Jaco, Mgr.
- CONFEDERACY VETERANS**, Sons of, Law Bldg., Richmond 19, Va., (1896), 11,000, Walter L. Hopkins, Adj.
- CONSULTING ENGINEERS**, American Inst. of, 75 West St., N. Y. 6, (1910), 150, George S. Armstrong, Pres.
- DE MOLAY**, Order of, 201 East Armour Blvd., Kansas City 2, Mo., (1919), 1,600,000, Frank S. Land, Sec.
- DENTAL Assn.**, American, 222 East Superior St., Chicago 11, (1859), 66,285, Dr. Harold Hillenbrand, Sec.
- DIETETIC Assn.**, American, 620 North Michigan Ave., Chicago 11, (1917), 8,000, Dr. Helen A. Hunscher, Pres.
- EAGLES**, Fraternal Order of, Locust and 12 St., Kansas City 6, Mo., (1898), 1,376,000, M. L. Brown, Man. Org.
- EDUCATION Assn.**, Natl., 1201 16 St. NW, Washington 6, (1857), 386,153, Willard E. Givens, Exec. Sec.
- ELECTRICAL ENGINEERS**, American Inst. of, 33 W. 39 St., N. Y. 18, (1884), 27,729, H. H. Henline, Sec.
- ELKS**, Benevolent and Protective Order of, 2750 Lake View Ave., Chicago 14, (1868), 900,000, L. A. Lewis, Grand Ruler.
- ENGINEERS**, American Assn. of, 8 South Michigan Blvd., Chicago 3, (1915), 5,335, M. E. McIver, Sec.
- EVANGELICAL AND REFORMED CHURCH**, Board of International Missions of the, 1505 Race St., Philadelphia 2, (1941), 708,382, Rev. D. F. Ehlman, Exec. Sec.
- FARM BUREAU Federation**, American, 58 East Washington St., Chicago 2, (1919), 1,128,000, Edward A. O'Neal, Pres.
- FOREIGN MISSIONS** Conference of North America, 156 Fifth Ave., N. Y. 10, (1893), 123 missions in U. S. and Canada, Wynn C. Fairfield, Exec. Sec.
- FOREIGN POLICY Assn.**, 22 E. 38 St., N. Y. 16, (1918), 30,000, Dr. B. Emery, Pres.
- FOREIGN RELATIONS**, Council of, 58 E. 68 St., N. Y. 21, (1921), 806, Walter H. Mallory, Exec. Dir.
- FORESTERS**, Society of American, Mills Bldg., Washington 6, (1900), 5,600, Henry E. Clepper, Exec. Sec.
- 4-H Clubs**, Extension Service, U. S. Dept. of Agriculture, Washington 25, (1914), 1,700,000, M. L. Wilson, Dir.
- FRIENDS General Conference**, 1515 Cherry St., Philadelphia 2, (1868), 18,000, J. Barnard Walton, Sec.
- GARDEN Club** of America, 598 Madison Ave., N. Y. 22, (1913), 8,000, Mrs. Hermann G. Place, Pres.

- GEOGRAPHIC Society, Natl.,** 1146 16 St. NW, Washington 6, (1888), 1,600,000, Gilbert Grosvenor, Pres.
- GIDEONS International, The,** 212 East Superior St., Chicago 11, (1899), 17,000, N. F. Dewar, Sec.
- GIRL SCOUTS of America,** 155 E. 44 St., N. Y. 17, (1912), 1,292,000, Mrs. Paul Rittenhouse, Natl. Dir.
- GOLD STAR MOTHERS,** American, New Colonial Hotel, Washington 5, (1928), 10,000, Mrs. Joseph S. Hagerty, Pres.
- GRANGE, The Natl.,** 744 Jackson Pl. NW, Wash. 6, (1867), 800,000, A. S. Goss, Master.
- HADASSAH,** 1819 Broadway, N. Y. 23, (1912), 200,000 seniors, 25,000 juniors, Jeannette N. Leibel, Exec. Sec.
- HEATING AND VENTILATING ENGINEERS,** American Society of, 51 Madison Ave., N. Y. 10, (1894), 5,800, Dr. Baldwin M. Woods, Pres.
- HEBREW CONGREGATIONS,** Union of American, 34 W. 6 St., Cincinnati 2, Ohio, (1873), 346 congregations, Rabbi Louis I. Egelson, Sec.
- HOME MISSIONS,** Board of, 287 Fourth Ave., N. Y. 10, (1846), Fred L. Brownlee, Gen. Sec.
- HOME MISSIONS Council of North America,** 297 Fourth Ave., N. Y. 10, (1908), 23 Protestant denomination members, Edith E. Lowry and M. A. Dawber, Exec. Sec.
- HORTICULTURAL Society,** American, 821 Washington Loan and Trust Bldg., Washington 4, (1922), 2,352, Wilbur H. Youngman, Pres.
- HOSPITAL Assn.,** American, 18 East Division St., Chicago 10, (1898), 3,907 institutions, 2,789 individuals, George Bugbee, Exec. Dir.
- HOTEL Assn.,** American, 221 W. 57 St., N. Y. 19, (1911), 6,500 hotels, Charles A. Horrworth, Exec. V. P.
- HUGUENOT Society of America,** 122 E. 58 St., N. Y. 22, (1883), 425.
- INDUSTRIAL ORGANIZATIONS,** Congress of, 718 Jackson Place NW, Washington 6, (1935), 6,500,000, Philip Murray, Pres.
- INFANTILE PARALYSIS,** Natl. Foundation for, 120 Broadway, N. Y. 5, (1938), Basil O'Connor, Pres.
- INVESTMENT BANKERS Assn. of America,** 33 South Clark St., Chicago 3, (1912), 715 firms, Julien H. Collins, Pres.
- IRON AND STEEL Inst.,** American, 350 Fifth Ave., N. Y. 1, (1908), 106 companies, 2,250 individuals, Walter S. Tower, Pres.
- IZAAK WALTON League of America,** 31 North State St., Chicago 2, (1922), 500 chapters, Kenneth A. Reid, Exec. Dir.
- JEWISH Committee,** American, 386 Fourth Ave., N. Y. 16, (1906), 8,200, John Slawson, Exec. V. P.
- JEWISH Congress,** American, 1834 Broadway, N. Y. 23, (1916), 250,000, David Petegorsky, Exec. Dir.
- JEWISH FEDERATION AND WELFARE FUNDS,** Council of, 165 W. 46 St., N. Y. 19, (1932), 263 federations, Harry L. Lurie, Exec. Dir.
- JEWISH HISTORICAL Society,** American, 3080 Broadway, N. Y. 27, (1892), 436, Dr. A. S. W. Rosenbach, Pres.
- JEWISH MEN'S Clubs,** Natl. Federation of, 3080 Broadway, N. Y. 27, (1929), 120 clubs, 25,000 individuals, Arthur S. Bruckman, Pres.
- JEWISH WAR VETERANS of the U. S.,** 50 W. 77 St., N. Y. 24, (1896), 100,000, Charles I. Schottland, Exec. Dir.
- JEWISH WELFARE Board,** Natl., 145 E. 32 St., N. Y. 16, (1913), 309 YM-YWHA's, 500,000 individuals, S. D. Gershovitz, Exec. Dir.
- JEWISH WOMEN,** Natl. Council of, 1819 Broadway, N. Y. 23, (1893), 65,000, Mrs. Elsie Elfenbein, Exec. Dir.
- KINDERGARTEN Assn.,** Natl., 8 W. 40 St., N. Y. 18, (1909), Bessie Locke, Exec. Sec.
- KIWANIS International,** 520 North Michigan Ave., Chicago 11, (1915), 178,700, Dr. Charles W. Armstrong, Pres.
- KNIGHTS of COLUMBUS,** P. O. Drawer 1670, New Haven 7, Conn., (1882), 694,477, John E. Swift, Supreme Knight.
- KNIGHTS of PYTHIAS,** 1054 Midland Bank Bldg., Minneapolis 1, (1864), 300,000, Judge Willard M. Kent, Sup. Chancellor.
- KNIGHTS TEMPLAR,** Grand Encampment of, 428 Chamber of Commerce Bldg., Indianapolis 4, Ind., (1865), 300,000, John T. Rice, Grand Master.
- LABOR,** American Federation of, A. F. of L. Bldg., Washington 1, (1881), 7,500,000, William Greene, Pres.
- LEGAL AID Society,** Natl. Assn. of, 11 Park Pl., N. Y. 7, (1876), 4,890, Martin V. Callagy, Attorney-in-chief.
- LEGION,** American, 777 North Meridian St., Indianapolis 6, Ind., (1919), 3,500,000, James F. O'Neill, Natl. Commander.
- LIBRARIES Assn.,** Special, 31 E. 10 St., N. Y. 3, (1909), 5,000, Mrs. Kathleen B. Stebbins, Exec. Sec.
- LIBRARY Assn.,** American, 50 East Huron St., Chicago 11, (1876), 16,000, Carl H. Milam, Exec. Sec.
- LIONS CLUBS,** International Assn. of, 332 South Michigan Ave., Chicago 4, (1917), 6,400 clubs, Melvin Jones, Sec.
- LOYAL LEGION of the U. S.,** Military Order of the, 1805 Pine St., Philadelphia 3, (1865), 2,000, James Vernor, C-in-C.
- LUTHER LEAGUE of America,** 1228 Spruce St., Philadelphia 7, (1895), 30,000, Joseph W. Frease, Exec. Sec.

- MAGAZINE PUBLISHERS**, Natl. Assn. of (formerly National Publishers Assn.), 232 Madison Ave., N. Y. 16, (1919), 120 publishers, Walter D. Fuller, Pres.
- MANUFACTURERS**, Natl. Assn. of, 14 W. 49 St., N. Y. 20, (1895), Earl Bunting, Pres.

- PHILATELIC Society**, American, P. O. Box 800, State College, Pa., (1886), 10,000, H. Clay Musser, Exec. Sec.
- PHYSICAL Society**, American, Columbia Univ., N. Y. 27, (1899), 7,000, J. R. Oppenheimer, Pres.
- PHYSICIANS**, American College of, 4200 Pine St., Philadelphia 4, (1915), 6,200, Edward R. Loveland, Exec. Sec.
- PILGRIMS of the U. S.**, 17 E. 42 St., N. Y. 17, (1903), 800, Gano Dunn, Chmn.
- PLANNED PARENTHOOD Federation of America**, 501 Madison Ave., N. Y. 22, (1920), D. Kenneth Rose, Natl. Dir.
- POLITICAL AND SOCIAL SCIENCE**, American Academy of, 3457 Walnut St., Philadelphia 4, (1889), 12,500, Dr. Ernest M. Patterson, Pres.
- POLITICAL SCIENCE**, Academy of, 413 Fayerweather Hall, Columbia Univ., N. Y. 27, (1880), 10,390, Ethel Warner, Dir.
- PREVENTION OF WAR**, Natl. Council for, 1013 18 St. NW, Washington 6, (1921), 125 corporations, Frederick J. Libby, Exec. Sec.
- PSYCHIATRIC Assn.**, American, 9 Rockefeller Plaza, N. Y. 20, (1844), 4,500, Dr. Winfred Overholser, Pres.
- PUBLIC HEALTH Assn.**, American, 1790 Broadway, N. Y. 19, (1872), 11,380, Dr. Reginald M. Atwater, Exec. Sec.
- PUBLIC HEALTH NURSING**, Natl. Organization for, 1790 Broadway, N. Y. 19, (1912), 9,361 nurses, 360 agencies, Ruth Houlton, Gen. Dir.

RADIO ENGINEERS, Inst. of, 330 W. 42 St., N. Y. 18, (1912), 20,000, George W. Bailey, Exec. Sec.

RAILROADS, Assn. of American, Transportation Bldg., Washington 6, (1934), 199 RR's William T. Farley, Pres.

RED CROSS, American Natl., 17 and E Sts. NW, Washington 13, (1881), 21,868,-600, Basil O'Connor, Pres.

RED MEN, Improved Order of, 1521 West Girard Ave., Philadelphia 30, (1834), 200,000, H. F. Stetser, Sec.

ROSE SOCIETY, American, Box 687, Harrisburg, Pa., (1899), 10,000, Dr. R. C. Allen, Exec. Sec.

ROTARY International, 35 East Wacker Drive, Chicago 1, (1905), 6,288 clubs, 305,000 individuals, S. K. Guernsey, Pres.

ROYAL ARCANUM, Supreme Council of the, 407 Shawmut Ave., Boston 18, (1877), 50,000, William Ennis, Supreme Regent.

SAFETY COUNCIL, Natl., 20 North Wacker Drive, Chicago 6, (1913), 7,420, Ned. H. Dearborn, Pres.

SALVATION ARMY, 120 W. 14 St., N. Y., (1890), 208,329, Ernest I. Pugmire, Natl. Commander.

SCHOOLS AND COLLEGES Assn., American, 30 Rockefeller Plaza, N. Y. 20, (1914), Kenneth J. Beebe, Pres.

SCIENCE, American Assn. for the Advancement of, 1515 Massachusetts Ave. NW, Washington 5, (1848), 33,000, Dr. F. R. Moulton, Sec.

SCIENCES, Natl. Academy of, 2101 Constitution Ave., Washington 25, (1863), 405, Alfred N. Richards, Pres.

SEAMENS Service, United, 39 Broadway, N. Y. 6, (1942), Otho J. Hicks, Exec. Dir.

SEEING EYE, Inc., The, Box 375, Morristown, N. J., (1929), 22,984, Henry A. Colgate, Pres.

SHRINERS (Islam Temple, A.A.O.N.M.S.), 650 Geary St., San Francisco 2, (1883), 8,378, Roy N. Buell, Potentate.

SOCIAL HYGIENE Assn., American, 1790 Broadway, N. Y. 19, (1914), 20,000, Dr. Walter Clarke, Exec. Dir.

SONS OF THE REVOLUTION, The General Society, 4 Linwood Place, White Plains, N. Y., (1876), 10,000, W. Hall Harris, Jr., Pres.

SPANISH WAR VETERANS, United, 40 G St. NE, Washington 13, (1904), 78,000, H. M. Havner, Commander-in-chief.

STANDARDS Assn., American, 70 E. 45 St., N. Y. 17, (1918), 110 associations, 2,100 company members, F. R. Lack, Pres.

STATE GOVERNMENTS, Council of, 1313 E. 60 St., Chicago 37, (1933), 15 legislators for each state, governors, etc., Frank Bane, Exec. Dir.

SURGEONS, American College of, 40 East Erie St., Chicago 11, (1913), 15,600, Dr. Malcolm T. MacEachern, Associate Dir.

THEODORE ROOSEVELT Memorial Assn., Women's, 28 E. 20 St., N. Y. 3, (1919), 500, Mrs. Frederick W. Longfellow, Pres.

TRAVELERS AID Society of N. Y., 144 E. 44 St., N. Y. 17, (1905), David W. Haynes, Gen. Dir.

TUBERCULOSIS Assn., Natl., 1790 Broadway, N. Y. 19, (1904), 3,539, Dr. James E. Perkins, Man. Dir.

UNIVERSITY PRESSES, Assn. of American, Harvard Univ. Press, Cambridge 38, Mass., (1924), 37, Datus C. Smith Jr., Pres.

UNIVERSITY PROFESSORS, American Assn. of, 1155 18 St. NW, Washington 6, (1915), 21,238, Ralph E. Himstead, Sec.

UNIVERSITY WOMEN, American Assn. of, 1634 I St. NW, Washington 6, (1881), 94,030, Dr. Kathryn McHale, Gen. Dir.

VETERANS COMMITTEE, American, 1860 Broadway, N. Y. 23, (1943), 103,000, Chat Paterson, Natl. Commander.

WOODMEN CIRCLE, Supreme Forest, 3303 Farnam St., Omaha 2, Nebr., (1891), 146,-330, Mrs. Dora A. Talley, Pres.

WOODROW WILSON Foundation, 45 E. 65 St., N. Y. 21, (1922), Frank Altschul, Pres.

WOMEN OF U. S., Natl. Council for, 501 Madison Ave., N. Y. 22, (1888), 5,000,000, Mrs. Ambrose N. Diehl, Pres.

WOMEN VOTERS, League of, 726 Jackson Place NW, Washington 6, (1920), 72,000, Mrs. Anna L. Strauss, Pres.

WOMEN'S Assn., American, 111 E. 48 St., N. Y. 17, (1922), Mrs. Natalie W. Lindholm, Pres.

WOMEN'S CLUBS, General Federation of, 1734 N St. NW, Washington 6, (1890), 3,000,000, Mrs. J. L. Blair Buck, Pres.

WOMEN'S VOLUNTARY SERVICES, American, 99 Park Ave., N. Y. 16, (1940), 90 units, Mrs. Ogden L. Mills, Natl. Pres.

WORKMEN'S CIRCLE, 175 East Broadway, N. Y. 2, (1900), 70,000, Ephim H. Jeschurin, Pres.

YOUNG MENS CHRISTIAN Assn., 347 Madison Ave., N. Y. 17, (1844), 2,500,000 (U. S.), Eugene E. Barnett, Gen. Sec.

YOUNG WOMENS CHRISTIAN Assn., 600 Lexington Ave., N. Y. 22, (1858), 3,000,-000, Mrs. Arthur F. Anderson, Pres.

YOUTH HOSTELS, American, Northfield, Mass., (1934), 20,000, Monroe Smith, Exec. Dir.

ZIONIST ORGANIZATION of America, 41 E. 42 St., N. Y. 17, (1897), 200,000, Dr. Sidney Marks, Exec. Dir.

ZOOLOGISTS, American Society of, 5700 Ingleside Ave., Chicago 37, (1902), 1,100, Dr. L. V. Domm, Sec.

NOBEL PRIZES

The Nobel prizes are awarded under the will of Alfred Bernhard Nobel, Swedish chemist and engineer, who died in 1896. The interest of the fund is divided annually among the persons who have made the most outstanding contributions in the field of physics, chemistry, and physiology or medicine, who have produced the most distinguished literary work of an idealist tendency, and who have contributed most toward world peace.

The prizes for physics and chemistry are awarded by the Swedish Academy of Science in Stockholm, the one for physiology or medicine by the Caroline Medical Institute in Stockholm, that for literature by the academy in Stockholm, and that for peace by a committee of five elected by the Norwegian Storting. The distribution of prizes was begun on December 10, 1901, the anniversary of Nobel's death. The amount of each prize varies with the income from the fund and since 1936 has stood at approximately £8,000.

Year	Literature	Peace
1901	René F. A. Sully Prudhomme (France)	Henri Dunant (Switzerland) and Frederick Passy (France)
1902	Theodor Mommsen (Germany)	Elle Ducommun and Albert Gobat (Switzerland)
1903	Björnstjerne Björnson (Norway)	Sir William R. Cremer (England)
1904	Frédéric Mistral (France) and José Echegaray (Spain)	Institut de Droit International (Belgium)
1905	Henryk Sienkiewicz (Poland)	Bertha von Suttner (Austria)
1906	Giosuè Carducci (Italy)	Theodore Roosevelt (U. S.)
1907	Rudyard Kipling (England)	Ernesto T. Moneta (Italy) and Louis Renault (France)
1908	Rudolf Eucken (Germany)	Klas P. Arnoldson (Sweden) and Frederik Bajer (Denmark)
1909	Selma Lagerlöf (Sweden)	Auguste M. F. Beernaert (Belgium) and Baron Paul H. B. B. d'Estournelles de Constant de Rebecque (France)
1910	Paul von Heyse (Germany)	The Bureau International Permanent de la Paix (Switzerland)
1911	Maurice Maeterlinck (Belgium)	Tobias M. C. Asser (Holland) and Alfred H. Fried (Austria)
1912	Gerhart Hauptmann (Germany)	Elihu Root (U. S.)
1913	Rabindranath Tagore (India)	Henri La Fontaine (Belgium)
1915	Romain Rolland (France)	No award
1916	Verner von Heldenstam (Sweden)	No award
1917	Karl Gjellerup (Denmark) and Henrik Pontoppidan (Denmark)	International Red Cross
1919	Carl Spitteler (Switzerland)	Woodrow Wilson (U. S.)
1920	Knut Hamsun (Norway)	Léon Bourgeois (France)
1921	Anatole France (France)	Karl H. Branting (Sweden) and Christian L. Lange (Norway)
1922	Jacinto Benavente (Spain)	Fridtjof Nansen (Norway)
1923	William B. Yeats (Ireland)	No award
1924	Wladyslaw Reymont (Poland)	No award
1925	George Bernard Shaw (England)	Sir Austen Chamberlain (England) and Charles G. Dawes (U. S.)
1926	Grazia Deledda (Italy)	Aristide Briand (France) and Gustav Stresemann (Germany)
1927	Henri Bergson (France)	Ferdinand Buisson (France) and Ludwig Quidde (Germany)
1928	Sigrid Undset (Norway)	No award
1929	Thomas Mann (Germany)	Frank B. Kellogg (U. S.)
1930	Sinclair Lewis (U. S.)	Lars O. J. Söderblom (Sweden)
1931	Erik A. Karlfeldt (Sweden)	Jane Addams (U. S.) and Nicholas M. Butler (U. S.)
1932	John Galsworthy (England)	No award
1933	Ivan G. Bunin (Russia)	Sir Norman Angell (England)
1934	Luigi Pirandello (Italy)	Arthur Henderson (England)
1935	No award	Carl von Ossietzky (Germany)
1936	Eugene O'Neill (U. S.)	Carlos de S. Lamas (Argentina)
1937	Roger Martin du Gard (France)	Lord Cecil of Chelwood (England)
1938	Pearl S. Buck (U. S.)	Office International Nansen pour les Réfugiés (Switzerland)
1939	Frans Emil Sillanpää (Finland)	No award

Nobel Prizes—(cont.)

Year	Literature	Peace
1944	Johannes V. Jensen (Denmark)	International Red Cross
1945	Gabriela Mistral (Chile)	Cordell Hull (U. S.)
1946	Hermann Hesse (Switzerland)	Emily Greene Balch (U. S.) and John R. Mott (U. S.)

Year	Physics	Chemistry	Medicine
1901	Wilhelm C. Roentgen, for discovery of Roentgen rays.	Jacobus H. van 't Hoff, for discovery of laws of chemical dynamics and osmotic pressure in solutions.	Emil A. von Behring, for work on serum therapy against diphtheria.
1902	Hendrik A. Lorentz and Pieter Zeeman, for work on influence of magnetism upon radiation.	Emil Fischer, for experiments in sugar and purin groups of substances.	Sir Ronald Ross, for work on malaria.
1903	Henri A. Becquerel, for work on discovery of spontaneous radioactivity. Pierre and Marie Curie, for investigation of phenomena of radiation.	Svante A. Arrhenius, for his electrolytic theory of dissociation.	Niels R. Finsen, for his treatment of lupus vulgaris, with concentrated light rays.
1904	John Strutt, Lord Rayleigh, for discovery of argon in investigating gas density.	Sir William Ramsay, for discovery and determination of the place of inert gaseous elements in the air.	Ivan P. Pavlov, for work on the physiology of digestion.
1905	Philipp Lenard, for work with cathode rays.	Adolph von Baeyer, for work on organic dyes and hydroaromatic combinations.	Robert Koch, for work on tuberculosis.
1906	Joseph J. Thomson, for investigations on passage of electricity through gases.	Henri Moissan, for isolation of fluorine, and introduction of electric furnace.	Camillo Golgi and Santiago Ramon y Cajal, for work on structure of the nervous system.
1907	Albert A. Michelson, for spectroscopic and meteorologic investigations.	Eduard Buchner, for discovery of cell-less fermentation and investigations in biological chemistry.	Charles L. A. Laveran, for work with protozoa in the generation of disease.
1908	Gabriel Lippmann, for method of reproducing colors by photography.	Ernest Rutherford, for investigations into disintegration of elements and chemistry of radioactive substances.	Paul Ehrlich and Elie Metchnikoff, for work on immunity.
1909	Guglielmo Marconi and Ferdinand Braun, for development of wireless.	Wilhelm Ostwald, for work on catalysis and investigations into principles governing chemical equilibrium and reaction rates.	Theodor Kocher, for work on the thyroid gland.
1910	Johannes D. van der Waals, for work with the equation of state for gases and liquids.	Otto Wallach, for work in the field of alicyclic compounds.	Albrecht Kossel, for achievements in the chemistry of the cell.
1911	Wilhelm Wien, for his laws governing the radiation of heat.	Marie S. Curie, for discovery of elements radium and polonium.	Allvar Gullstrand, for work on the dioptrics of the eye.
1912	Gustaf Dalén, for discovery of automatic regulators used in lighting lighthouses and light buoys.	Victor Grignard, for reagent discovered by and named after him; and Paul Sabatier, for the methods of hydrogenating organic compounds.	Alexis Carrel, for work on vascular ligature and grafting of blood vessels and organs.

Year	Physics	Chemistry	Medicine
1913	H. Kamerlingh Onnes, for work leading to production of liquid helium.	Alfred Werner, for linking up atoms within the molecule.	Charles Richet, for work on anaphylaxis.
1914	Max von Laue, for discovery of defraction of Roentgen rays passing through crystals.	Theodore W. Richards, for determining atomic weight of many chemical elements.	Robert Bárány, for work on physiology and pathology of the vestibular system.
1915	W. H. Bragg and W. L. Bragg, for analysis of crystal structure by means of X rays.	Richard Willstätter, for research into coloring matter of plants, especially chlorophyll.	No award.
1917	Charles G. Barkla, discovery of Roentgen radiation of the elements.	No award.	No award.
1918	Max Planck, for discoveries in connection with quantum theory.	Fritz Haber, for synthetic production of ammonia.	No award.
1919	Johannes Stark, discovery of Doppler effect in Canal rays and decomposition of spectrum lines by electric fields.	No award.	Jules Bordet, for discoveries in connection with immunity.
1920	Charles E. Guillaume, for discoveries of anomalies in nickel steel alloys.	Walther Nernst, for work in thermochemistry.	August Krogh, discovery of regulation of capillaries' motor mechanism.
1921	Albert Einstein, for discovery of the law of the photoelectric effect.	Frederick Soddy, for investigations into origin and nature of isotopes.	No award.
1922	Niels Bohr, for investigations of structure of atoms and radiations emanating from them.	Francis W. Aston, for discovery of isotopes in nonradioactive elements and for discovery of the whole number rule.	In 1923 the 1922 prize was divided between Archibald V. Hill for discovery relating to heat-production in muscles; and Otto Meyerhof, for correlation between consumption of oxygen and production of lactic acid in muscles.
1923	Robert A. Millikan, work on elementary charge of electricity and photoelectric phenomena.	Fritz Pregl, for method of microanalysis of organic substances discovered by him.	Frederick G. Banting and John J. R. MacLeod, for discovery of insulin.
1924	Karl M. G. Siegbahn, for investigations in X-ray spectroscopy.	No award.	Willem Einthoven, for discovering the mechanism of the electrocardiogram.
1925	James Franck and Gustav Hertz, for discovery of laws governing impact of electrons upon atoms.	In 1926 the 1925 prize was awarded to Richard Zsigmondy, for work on the heterogeneous nature of colloid solutions.	No award.
1926	Jean Perrin, for works on discontinuous structure of matter and discovery of the equilibrium of sedimentation.	The Svedberg, for work on disperse systems.	Johannes Fibiger, for discovery of the Spiroptera carcinoma.
1927	Arthur H. Compton, discovery of Compton phenomenon; and Charles T. R. Wilson, for method of perceiving paths taken by electrically charged particles.	In 1928 the 1927 prize was awarded to Heinrich Wieland, for investigations of bile acids and kindred substances.	Julius Wagner-Jauregg, for use of malaria inoculation in treatment of dementia paralytica.

Nobel Prizes—(cont.)

Year	Physics	Chemistry	Medicine
1928	In 1929 the 1928 prize was awarded to Owen W. Richardson, for work on the phenomenon of thermionics and discovery of the Richardson Law.	Adolf Windaus, for investigations on constitution of the sterols and their connection with vitamins.	Charles Nicolle, for work on typhus exanthematicus.
1929	Prince Louis Victor de Broglie, for discovery of the wave character of electrons.	Arthur Harden and Hans K. A. S. von Euler-Chelpin, for research of fermentation of sugars.	Christiaan Eijkman, for discovery of the anti-neuritic vitamins; and Sir Frederick G. Hopkins, for discovery of growth-promoting vitamins.
1930	Sir Chandrasekhara V. Raman, for work on diffusion of light and discovery of the Raman effect.	Hans Fischer, for work on coloring matter of blood and leaves and for his synthesis of hemin.	Karl Landsteiner, for discovery of human blood groups.
1931	No award.	Carl Bosch and Friedrich Bergius, for invention and development of chemical high-pressure methods.	Otto H. Warburg, for discovery of the character and mode of action of the respiratory ferment.
1932	In 1933 the prize for 1932 was awarded to Werner Heisenberg, for creation of the quantum mechanics.	Irving Langmuir, for work in realm of surface chemistry.	Sir Charles S. Sherrington and Edgar D. Adrian, for discoveries of the function of the neuron.
1933	Erwin Schroedinger and P. A. M. Dirac, for discovery of new fertile forms of the atomic theory.	No award.	Thomas H. Morgan, for discoveries on hereditary function of the chromosomes.
1934	No award.	Harold C. Urey, for discovery of heavy hydrogen.	George H. Whipple, George R. Minot, and William P. Murphy, for discovery of liver therapy against anaemias.
1935	James Chadwick, for discovery of the neutron.	Frédéric and Irène Curie Joliot, for synthesis of new radioactive elements.	Hans Spemann, for discovery of the organizer-effect in embryonic development.
1936	Victor F. Hess, for discovery of cosmic radiation; and Carl D. Anderson, for discovery of the positron.	Peter J. W. Debye, for investigations on dipole moments and diffraction of X rays and electrons in gases.	Sir Henry H. Dale and Otto Loewi, for discoveries on chemical transmission of nerve impulses.
1937	Clinton J. Davisson and George P. Thomson, for discovery of diffraction of electrons by crystals.	Walter N. Haworth, for research on carbohydrates and Vitamin C.	Albert Szent-Györgyi von Nagrapolt, for discoveries on biological combustion.
1938	Enrico Fermi, for identification of new radioactivity elements and discovery of nuclear reactions effected by slow neutrons.	Richard Kuhn, for carotinoid study and vitamin research.	Cornell Heymans, for importance of sinus and aorta mechanisms in the regulation of respiration.
1939	Ernest Orlando Lawrence, for the development of the cyclotron.	Adolf Friedrich Johann Butenandt, for work on sexual hormones (declined the prize) and Leopold Ruzicka, work with polymylenes.	Gerhard Domagk, antibacterial effect of pron-tocilate.

Year	Physics	Chemistry	Medicine
1943	Otto Stern, for detection of magnetic momentum of protons.	George Hevesy De Heves, for work on use of isotopes as chemical indicators.	Henrik Dam, Edward A. Doisy for the discovery of the chemical nature of Vitamin K.
1944	Isidor Isaac Rabi, for work on magnetic movements of atomic particles.	Otto Hahn, for work on atomic fission.	Joseph Erlanger and Herbert Spencer Gasser, for work on functions of the nerve threads.
1945	Wolfgang Pauli, for work on atomic fissions.	Artturi Ilmari Virtanen, for research in the field of conservation of fodder.	Sir Alexander Fleming, Ernst Boris Chain, and Sir Howard Florey, for discovery of penicillin.
1946	Percy Williams Bridgman, studies and inventions in high-pressure physics.	James B. Sumner, crystallizing of enzymes. John H. Northrop and Wendell M. Stanley, preparing enzymes and virus proteins in pure form.	Hermann J. Muller, hereditary effects of X-ray on genes.

(For 1947 Nobel Prize Winners see Index)

The Hall of Fame

The Hall of Fame for Great Americans, established in 1900 on the campus of New York University, is an open-air colonnade containing busts of 75 of the 77 persons so far honored for national achievements. New names are voted on every five years by a committee of 100 men and women from all the states. To be elected to the Hall of Fame, an individual must have been dead more than 25 years, must have been a citizen of the United States, through birth or naturalization, and must receive three-fifths of the vote of the committee. Nominations for the Hall of Fame may be made by any citizen of the United States. The next election is in 1950.

Names	Elected	Names	Elected
John Adams (statesman)	1900	Mark Hopkins (educator)	1915
John Quincy Adams (statesman)	1905	Elias Howe (inventor)	1915
Louis Agassiz (naturalist)	1915	Washington Irving (author)	1900
John James Audubon (naturalist)	1900	Andrew Jackson (statesman)	1910
George Bancroft (historian)	1910	Thomas Jefferson (statesman)	1900
Henry Ward Beecher (clergyman)	1900	John Paul Jones (naval officer)	1925
Daniel Boone (explorer)	1915	James Kent (jurist)	1900
Edwin Booth (actor)	1925	Sidney Lanier (poet)	1945
Phillips Brooks (clergyman)	1910	Robert E. Lee (military officer)	1900
William Cullen Bryant (poet)	1910	Abraham Lincoln (statesman)	1900
William Ellery Channing (clergyman)	1900	Henry W. Longfellow (poet)	1900
Rufus Choate (lawyer)	1915	James Russell Lowell (poet)	1905
Henry Clay (statesman)	1900	Mary Lyon (educator)	1905
Samuel L. Clemens (Mark Twain) (author)	1920	James Madison (statesman)	1905

SCIENCE

MEASURES AND WEIGHTS UNITS OF LENGTH

Metric System

The meter was originally intended to be the ten-millionth of the earth's quadrant, a quadrant being one-quarter of a circumference. However, because of the difficulty of determining such a length with accuracy, this definition was abandoned. The meter is now considered to be the distance at 0°C between two microscopic marks on the International Prototype Meter, a platinum-iridium bar, kept by the International Bureau of Weights and Measures at Sèvres, France, a suburb of Paris.

In 1927, the International Conference on Weights and Measures adopted a secondary definition of the meter in terms of light waves. According to this definition, one meter is equivalent to 1,553,164.13 wavelengths of the red light from cadmium.

Unit	Comparison	English equivalent
Millimeter (mm)	.001 meter	.0394 inch
Centimeter (cm)	.01 meter	.3937 inch
Decimeter (dm)	.1 meter	3.937 inches
Meter (m)		3.2808 feet
Kilometer (km)	10 meters	32.8083 feet
Hectometer (hm)	100 meters	328.0833 feet
Kilometer (km)	1000 meters	.62137 mile

English System

According to legend, the yard was established by Henry I as the distance from the point of his nose to the end of his thumb when his arm was outstretched. The British Imperial Yard was defined in 1878 by the Weights and Measures Act as the distance at 62°F between two fine lines on gold studs sunk in a bronze bar known as the "No. 1 Standard Yard." This is equivalent to .914399 meter. In the United States, the yard is defined in terms of the meter, using as a standard the U. S. Prototype Meter. According to this definition, the yard is 3600/3937 (or .914402) meter, slightly longer than the British Imperial Yard.

Unit	Comparison	Metric equivalent
Inch (in.)		25.4001 millimeters
Foot (ft)	12 inches	.3048 meter
Yard (yd)	36 inches 3 feet	.9144 meter
Rod (rd)	16½ feet 5½ yards	5.0292 meters
Furlong (fur.)	660 feet 220 yards 40 rods	201.1684 meters
Mile (mi) *	5280 feet 1760 yards 320 rods 8 furlongs	1.0693 kilometers

*Known as statute mile. See nautical mile under Miscellaneous Units.

UNITS OF WEIGHT OR MASS

The term *mass* denotes the amount of matter contained in an object, while the term *weight* denotes the gravitational pull of the earth on the object. For practical purposes, the two terms are synonymous.

Metric System

The gram was originally intended to be equal to the mass of one cubic centimeter of pure water at 4°C. However, because of

the difficulty of making exact measurement, a small error was made; and it has since been found that a kilogram of pure water occupies 1.000028 cubic decimeter. The standard for the kilogram is a platinum-iridium cylinder, called the International Prototype Kilogram, which is kept at the International Bureau of Weights and Measures in France.

Unit	Comparison	Avdp.	English equivalents Troy	Apoth.

Kilogram (kg)	1000 grams	2.2046 pounds	2.6792 pounds	2.6792 pound
Metric ton (t)	1000 kg	1.1023 tons *		

*Short tons. A metric ton is equivalent to .9842 long ton.

English System

The English System is complicated by the existence of three different kinds of weight: *avoirdupois weight*, used for common purposes; *troy weight*, used for weighing gold, silver, etc.; and *apothecaries weight*, used for making up medical prescriptions.

The British Imperial Pound (avoirdupois) is defined as the mass of a pure platinum

cylinder kept by the Standards Department of the Board of Trade. In the United States, the pound (avoirdupois) is defined in terms of the kilogram, using a standard the U. S. Prototype Kilogram. According to this definition, the pound is equal to .4535924277 kilogram, making it infinitesimally smaller than the British Imperial Pound.

*Known as the short hundredweight, which is in use in the United States and Canada. Great Britain uses the long hundredweight (112 lb or 50.8024 kg).

†Known as the short ton, which is in use in the United States and Canada. Great Britain uses the long ton (2240 lb or 1.01605 metric tons).

UNITS OF CAPACITY

Metric System

The liter is a secondary unit of capacity defined as the volume occupied by one kilogram of pure water at 4°C. It was intended that the liter should exactly equal one cubic decimeter, but as an error was made in measurement, has since been found to equal 1.000028 cubic decimeters.

Unit	Comparison	English equivalents Liquid	Dry
Milliliter (ml)	.001 liter	.0338 fl oz	.0018
Centiliter (cl)	.01 liter	.3381 fl oz	.0182
Deciliter (dl)	.1 liter	3.3815 fl oz	.1816
Liter (l)		1.0567 qt	.9081
Dekaliter (dkl)	10 liters	2.6418 gal	1.1351
Hectoliter (hl)	100 liters	26.4178 gal	2.8378

English System

In Great Britain, the standard unit of capacity for measuring both liquid and dry commodities is the British Imperial gallon. It is defined as the volume of ten pounds of pure water at 62°F and contains 277.418 cubic inches. The bushel is defined as eight gallons (2218.192 cubic inches).

In the United States, there are two separate standards. The unit for measuring liquids is the gallon, which is defined as 128 cubic inches; the unit for measuring dry commodities is the bushel, which is defined as 2150.42 cubic inches.

UNITS OF CIRCULAR MEASURE

Unit	Comparison
Second (")	
Minute (')	60 seconds
Degree (°)	60 minutes
Right angle	90 degrees
Straight angle	180 degrees
Circle	360 degrees

Circumference

Circle: $C = \pi d$, in which π is 3.1416 and d the diameter.

Area

Triangle: $A = \frac{ab}{2}$, in which a is the base and b the height.

Square: $A = a^2$, in which a is one of the sides.

Rectangle: $A = ab$, in which a is the base and b the height.

Trapezoid: $A = \frac{h(a+b)}{2}$, in which h is the height, a the longer parallel side, and b the shorter.

Regular pentagon: $A = 1.720a^2$, in which a is one of the sides.

Regular hexagon: $A = 2.598a^2$, in which a is one of the sides.

Regular octagon: $A = 4.828a^2$, in which a is one of the sides.

Circle: $A = \pi r^2$, in which π is 3.1416 and r the radius.

Volume

Cube: $V = a^3$, in which a is one of the edges.

Rectangular prism: $V = abc$, in which a is the length, b the width, and c the depth.

Pyramid: $V = \frac{Ah}{3}$, in which A is the area of the base and h the height.

	4 pecks		

COMMON FORMULAS

Cylinder: $V = \pi r^2 h$, in which π is 3.1416, r the radius of the base, and h the height.

Cone: $V = \frac{\pi r^2 h}{3}$, in which π is 3.1416, r the radius of the base, and h the height.

Sphere: $V = \frac{4\pi r^3}{3}$, in which π is 3.1416 and r the radius.

Miscellaneous

Speed per second acquired by falling body: $v = 32t$, in which t is the time in seconds.

Distance in feet traveled by falling body: $d = 16t^2$, in which t is the time in seconds.

Speed of sound in feet per second through any given temperature of air:

$V = \frac{1087\sqrt{273+t}}{16.52}$, in which t is the temperature Centigrade.

Cost per hour of operation of electrical de-

vice: $C = \frac{Wtc}{1000}$, in which W is the number of watts, t the time in hours, and c the cost per kilowatt-hour.

Conversion of matter into energy (Einstein's Theorem): $E = mc^2$, in which E is the energy in ergs, m the mass of the matter in grams, and c the speed of light in centimeters per second. ($c^2 = 9 \cdot 10^{20}$).

Abbreviations

The National Bureau of Standards recommends that the period be omitted after all abbreviations of units unless the

abbreviation forms an English word, and that the same abbreviation be used for both singular and plural.

FAHRENHEIT AND CENTIGRADE SCALES

Zero on the Fahrenheit scale represents the temperature produced by the mixing of equal weights of snow and common salt.

Absolute zero is theoretically the lowest possible temperature, the point at which all molecular motion would cease.

	F	C
Boiling point of water	212°	100°
Freezing point of water	32°	0°
Absolute zero	-459.6°	-273.1°

To convert Fahrenheit to Centigrade, subtract 32 and multiply by 5/9.

To convert Centigrade to Fahrenheit, multiply by 9/5 and add 32.

ROMAN NUMERALS

Roman numerals are expressed by letters of the alphabet and are rarely used today except for formality or variety.

There are three basic principles for reading Roman numerals:

1. A letter repeated once or twice repeats its value that many times. (XXX=30, CC=200, etc.).

2. One or more letters placed after another letter of greater value increases the greater value by the amount of the smaller. (VI=6, LXX=70, MCC=1200, etc.).

3. A letter placed before another letter of greater value decreases the greater value by the amount of the smaller. (IV=4, XC=90, CM=900, etc.).

Letter	Value	Letter	Value
I	1	LX	60
II	2	LXX	70
III	3	LXXX	80
IV	4	XC	90
V	5	C	100
VI	6	D	500
VII	7	M	1,000
VIII	8	\overline{V}	5,000
IX	9	\overline{X}	10,000
X	10	\overline{L}	50,000
XX	20	\overline{C}	100,000
XXX	30	\overline{D}	500,000
XL	40	\overline{M}	1,000,000
L	50		

SIMPLE INTEREST FOR \$100

To find the interest for any amount of money, move the decimal point of that amount two places to the left and multi-

ply by the figure obtained from the table.

For figuring simple interest, the year is considered to have 360 days.

	1 Day	7 Days	1 Month	3 Months	6 Months	1 Year
2%	\$.00556	\$.03889	\$.16667	\$.50000	\$1.00000	\$2.00000

MISCELLANEOUS UNITS

ANGSTROM (A or λ): .0001 micron or .0000001 mm. Used for measuring length of light waves.

ASTRONOMICAL UNIT (A.U.): 93,003,000 miles, the average distance of the earth from the sun. Used for measuring astronomical distances.

BARREL (bbl): For liquids, 31½ gallon or 7326.5 cubic inches. For dry commodities, except cranberries: 105 dry quart or 7056 cubic inches. For cranberries: 5826 cubic inches.

BOARD FOOT (fbm): 144 cubic inch (12 in. x 12 in. x 1 in.). Used for lumber.

BOLT: 40 yards. Used for measuring cloth.

CABLE: About 100 fathoms or 600 feet. Used for measuring lengths of cable.

CARAT (c): 200 milligrams or 3.086 grains troy. Originally the weight of a seed of the carob tree in the Mediterranean region. Used for weighing precious stones. Also a measure of the purity of gold alloy, indicating how many parts out of 24 are pure. Eighteen carat gold, for example, is $\frac{3}{4}$ pure.

CHAIN (ch): a chain 66 feet or one-tenth of a furlong in length, divided into 100 parts called links. One mile is equal to 80 chains. Used in surveying and sometimes called Gunter's chain.

CUBIT: 18 inches or 45.72 cm. Derived from distance between elbow and tip of middle finger.

ELL, ENGLISH: $1\frac{1}{4}$ yards or $\frac{1}{2}$ bolt. Used for measuring cloth.

FATHOM (fath): 6 feet or 1.8288 m. Derived from the distance to which a man can stretch his arms. Used for measuring cables and depths of water.

GREAT GROSS: 12 gross or 1728.

GROSS: 12 dozen or 144.

HAND: 4 inches or 10.16 cm. Derived from the width of the hand. Used for measuring the height of horses at withers.

HOGSHEAD (hhd): 2 liquid barrels or 14.653 cubic inches.

KNOT: Not a distance, but the rate of speed of one nautical mile per hour. Used for measuring speed of ships.

LEAGUE: Rather indefinite and varying measure, but usually estimated at 3 miles in English-speaking countries.

LIGHT-YEAR: 5,880,000,000,000 miles, the distance light travels in a year at the rate of 186,273 miles per second. (If an astronomical unit were represented by one inch, a light-year would be represented by about one mile.) Used for measurements in interstellar space.

LINK: One-hundredth of a chain or 7.92 inches. Used in surveying.

MAGNUM: Two-quart bottle. Used for measuring wine, etc.

MICRON (μ): .001 millimeter. Used for scientific measurements

MIL: .001 inch. Used for measuring size of wire. The area of a cross-section of wire is usually expressed in circular mils, a circular mil being the area of a circle one mil in diameter. A wire one inch in diameter has a cross-section area of one million circular mils.

MILLIMICRON (m μ): .001 micron or .000001 mm. Used for scientific measurements.

NAUTICAL MILE (also called **GEOGRAPHICAL or SEA MILE**): Equal to a minute or 2/21600 of a great circle of the earth. Length varies in different countries. In Great Britain, it is 6080 feet or 1853.2 meters, and in the United States, it is 6080.2 feet or 1853.248 meters. The International Hydrographic Bureau proposed in 1929 a length of 1852 meters or 6,076.097 feet, which has been adopted by several countries.

PARSEC: Approximately 3.26 light-years or 19.2 trillion miles. Term is combination of first syllables of *parallax* and *second*, and distance is that of imaginary star when lines drawn from it to both earth and sun form a maximum angle or parallax of one second (1/3600 degree). Used for measuring interstellar distances.

PICA: $\frac{1}{6}$ inch or 12 points. Used in printing for measuring column width, etc.

PIPE: 2 hogsheads. Used for measuring wine and other liquids.

POINT: .013837 (approximately $1/72$) inch or $1/12$ pica. Used in printing for measuring type size.

REAM: Used for measuring paper. Sometimes 480 sheets, but more often 500 sheets.

SPAN: 9 inches or 22.86 cm. Derived from the distance between the end of the thumb and the end of the little finger when both are outstretched.

STONE: Legally 14 pounds avoirdupois in Great Britain.

TUN: 252 gallons, but often larger. Used for measuring wine and other liquids.

*VALENCE is a measure of the extent to which an atom is able to combine directly with others.

†ISOTOPES are one of two or more elements having same atomic number identical in chemical behavior. Because of their differences in mass, isotopes may be distinguished in the mass spectrophotograph and in band spectra. Now becoming increasingly important in chemical observations and discoveries of new elements and properties.

†Liquid. §Amorphous. ¶Graphite. **Crystalline. ††Compressed. ‡Cast. §§1939 atomic weight. ¶¶Exact date doubtful—born 1193 and died 1280. < Is less than. > Is greater than.

Figures in parentheses are tentative or theoretical.

Note that the number of isotopes of each element is increasing by discovery or by manufacture.

PHYSICAL CHEMISTRY: Josiah Willard Gibbs (1839-1903), Professor of Mathematical Physics at Yale, by his formulation of the "Phase Rule" and his "On the Equilibrium of Heterogeneous Substances" founded physical chemistry.

ORGANIC CHEMISTRY: Although others had experimented in organic chemistry, the origin of this branch may be ascribed to Friedrich Wöhler who synthesized urea, an organic compound, from ammonium cyanate, an inorganic, in 1828.

SCIENTIFIC INVENTIONS AND DISCOVERIES

Source: Encyclopaedia Britannica.

DISCOVERIES AND INVENTIONS IN CHEMISTRY

- 1766—CAVENDISH. Discovery of "inflammable air" (hydrogen) as distinct substance and demonstration (1781) that it burned to form water.
- 1774—PRIESTLEY. Discovery of oxygen.
- 1783—LAVOISIER. First quantitative synthesis of water.
- 1803—DALTON. Atomic theory; laws of chemical combination.
- 1809—GAY-LUSSAC. Laws of gases.
- 1811—AVOGADRO. Molecular hypothesis.
- 1828—WÖHLER, LIEBIG. Synthesis of urea; foundation of organic chemistry.
- 1841—FARADAY. Induction of electric current.
- 1860—BUNSEN, KIRCHHOFF. Invention of the spectroscope.
- 1868—LOCKYER. Discovery of helium on the sun by use of spectroscope.
- 1869—MENDELEEV. Periodic table of elements, established families of elements.
- 1887—ARRHENIUS. Ionic theory of dissociation in solution.
- 1896—BECQUEREL. Radioactivity of uranium.
- 1899—CURIE. Discovery of radium.
- 1908—ONNES (Kamerlingh). Liquefaction of helium.
- 1912—LAUE, BRAGG. X-ray structures of crystals.
- 1913—MOSELEY. Atomic numbers.
- 1919—ASTON. Mass spectroscope for separation of isotopes.
- 1932—UREY. Discovery of deuterium.
- 1934—JOLIOT, CURIE. Artificial radioactivity.

INVENTIONS AND DISCOVERIES IN APPLIED CHEMISTRY

- 1650—GLAUBER. Manufacture of hydrochloric acid.
- 1839—GOODYEAR. Process for vulcanizing rubber.
- 1846—SCHÖNBEIN. Invention of gun cotton.
- 1856—BESSEMER. Air blast converter for manufacture of steel.
- 1858—HOFMANN. Discovered aniline in coal tar; aniline dyes.
- 1861—SOLVAY. Manufacture of soda from salt.
- 1862—NOBEL. Invention of dynamite.
- 1873—LINDE. Introduced ammonia refrigeration.
- 1886—HALL. Manufacture of aluminum by electrolytic action.
- 1891—FRASCH. Method for mining sulphur.
- 1908—BAKELAND. Phenol-formaldehyde resins (bakelite).
- 1913—HABER. Synthesis of ammonia from nitrogen and hydrogen.
- 1915—LANGMUIR. Tungsten filaments.
- 1923—MIDGLEY. Tetraethyl lead gasoline.
- 1930—CAROTHERS. Nylon plastic.
- 1930—IPATIEFF. High-octane gasoline.
- 1930—CAROTHERS and COLLINS. Neoprene, synthetic rubber.

DISCOVERIES AND INVENTIONS IN ELECTRICITY

- 1745—VON KLEIST. Leyden jar condenser.
- 1752—FRANKLIN. Lightning rod and the nature of lightning.
- 1791—GALVANI. Theory of animal electricity.
- 1800—VOLTA. Current electricity and electric battery.
- 1826—OHM. Laws of electrical resistance.
- 1828—HENRY. Electromagnetism and induction.
- 1831—FARADAY. Electromagnetic induction.
- 1832—MORSE. Electric telegraph perfected.
- 1832—GAUSS. System of absolute electric measurements.
- 1838—PAGE. Induction coil.
- 1870—GRAMME. First industrial dynamo.
- 1876—BELL. Telephone.
- 1878—CROOKES. Discovery of cathode ray.
- 1878—EDISON. First electric incandescent lamp.
- 1855—STANLEY. Electric transformer.
- 1892—TESLA. Alternating current motor.
- 1892—STEINMETZ. Laws of alternating current.
- 1895—ROENTGEN. Discovery of X-rays.
- 1896—MARCONI. Practical wireless.
- 1897—THOMSON. Isolation of the electron.
- 1904—FLEMING. First diode radio tube.
- 1907—DE FOREST. Triode radio tube.
- 1914—COOLIDGE. Tungsten filament lamp.
- 1925—BAIRD. Televisor, precursor of television.

MECHANICAL INVENTIONS AND DISCOVERIES

- 1769—WATT. Steam engine patented.
 1783—MONTGOLFIER. Hot-air balloon.
 1785—CARTWRIGHT. Power loom.
 1786—REED. Machine-cut nails.
 1787—FITCH. Steamboat.
 1793—WHITNEY. Cotton gin; mass production of interchangeable gun parts, 1798.
 1797—NEWBOLD. Cast-iron plow.
 1807—FULTON. First successful steamboat.
 1816—DAVY. Miner's safety lamp.
 1829—STEPHENSON. First successful steam railroad.
 1833—McCORMICK. Reaper.
 1835—COLT. Revolver.
 1837—ERICSSON. Screw propeller.
 1846—HOE. Rotary printing press.
 1846—HOWE. Sewing machine.
 1852—OTIS. Improved power elevator.
 1858—FIELD. Successful Atlantic cable.
 1861—GATLING. Machine gun.
 1868—SHOLES, GLIDDEN. Typewriter.
 1869—WESTINGHOUSE. Air brake for railroads.
 1877—EDISON. Phonograph.
 1888—DUNLOP. Pneumatic tire.
 1893—EDISON. Motion pictures.
 1897—DIESEL. First successful heavy oil engine.
 1903—WRIGHT BROTHERS. Airplane.
 1905—SPERRY. Gyrocompass.
 1909—BRÉGUET. Helicopter.

DISCOVERIES AND INVENTIONS IN PHYSICS

- 1687—NEWTON. Law of gravity.
 1785—COULOMB. Fundamental laws of electrical attraction.
 1798—THOMPSON (Baron Rumford). Mechanical theory of heat.
 1815—FRESNEL. Diffraction of light.
 1840—JOULE. Measurements of electric current.
 1847—HELMHOLTZ. Law of conservation of energy.
 1873—MAXWELL. Electromagnetic theory of light.
 1896—BECQUEREL. Discovery of radioactivity.
 1897—WILSON. Development of cloud chamber to detect subatomic particles.
 1897—THOMSON. Discovery of electrons.
 1901—PLANCK. Quantum theory.
 1902—MICHELSON. Velocity of light.
 1905—EINSTEIN. Special theory of relativity.
 1911—RUTHERFORD. Theory of atomic nucleus.
 1913—BOHR. Electron theory.
 1924—DE BROGLIE. Wave nature of the electrons.
 1931—LAWRENCE. Invention of the cyclotron.
 1932—CHADWICK. Discovery of the neutron.
 1932—ANDERSON. Discovery of the positron.
 1934—FERMI. Use of slow neutrons in atom smashing.
 1938—HAHN. Discovery of uranium fission.
 1941—FERMI, *et al.* Atomic pile for generation of power.

DISCOVERIES IN PHYSIOLOGY AND MEDICINE

- 1628—HARVEY. Circulation of blood and function of the heart.
 1675—LEEUEWENHOEK. Observation of bacteria by microscope.
 1737—LINNAEUS. System for classifying plants and animals.
 1796—JENNER. Vaccination for smallpox.
 1842—LONG. First to use ether as anesthetic in surgery. (Jackson, Morton, and Long disputed first use of ether.)
 1859—DARWIN. Evolution and theory of natural selection.
 1865—MENDEL. Laws of heredity.
 1867—LISTER. Antiseptic surgery.
 1882—PASTEUR. Rabies preventive.
 1882—KOCH. Tuberculosis bacteria discovered.
 1894—ROUX. Perfection of diphtheria antitoxin.
 1901—TAKAMINE. Isolation of adrenaline, first hormone isolated.
 1905—BINET. Intelligence tests.
 1906—WASSERMANN, *et al.* Test for syphilis.
 1908—FREUD. Doctrine of psychoanalysis.
 1910—PAVLOV. Mechanism of the conditioned reflex.
 1913—SCHICK. Test of susceptibility to diphtheria.
 1913—McCOLLUM. Isolation of vitamin A.
 1922—BANTIN, MACLEOD. Insulin for treatment of diabetes.
 1932—DOMAGK. Sulfa drugs as bactericides.
 1946—DU VIGNEAUD. Synthetic penicillin.

The Races of Mankind

by Professor Wilton Marion Krogman, Dept. of Anthropology, University of Pennsylvania

Classification of Man into groups called "races" rests upon the basic fact that all peoples belong to the same genus and species, *Homo sapiens*. This is important to keep in mind, for it implies that all peoples are much more alike than different.

Scientists classify Man by using a number of physical traits, most of them based upon observation rather than upon precise measurement. Examples of these are stature and head-form (determined by a breadth/length ratio), skin color, hair color, form and texture, eye color, nose shape, mouth form, shape of face with special reference to cheek-bones. Other criteria, such as arm and leg proportions, are more specialized. Two things are noteworthy here: (1) most of the physical traits are external; (2) physical traits are so variable that a single trait has virtually no diagnostic value.

We may define a *race*, simply, as a subgroup of Mankind more or less set apart by a combination of physical traits.

There are three, possibly four, great aggregates of races, usually called *stocks*: Caucasoid, Mongoloid, Negroid, and Archaic Caucasoid (or Australoid). The first three are often referred to as "White," "Yellow," and "Black." This is not really correct; peoples of North-Central India are Caucasoids, yet their skin-color is brown to dark-brown; certain tribes of Northeast Africa are Negroids, yet their skin-color is light-brown to brown. Variability also may be seen in stature: the tallest people in the world are found in Denmark and the Scottish Highlands, in East Africa, and in southernmost South America—respectively Caucasoid, Negroid, and Mongoloid. It must be re-emphasized that not one or two traits, but an aggregate of traits, of genetic origin, provides the only valid method of setting up stock or racial classification.

Caucasoids are the peoples of Europe, the adjacent shores of North Africa, and of Asia Minor and the northern half of India. The following races belong to the Caucasoid stock: Nordic, or Northwest European, Alpine or Central European, Mediterranean or Southwest European, Baltic or Northeast European, Dinaric or Southeast European, Armenoid in western Asia Minor, and Indio (often called Hindu) in North-Central India. These races are not, of course, absolutely limited to those geographical areas. For example, the Mediterranean race is found also in North Africa, especially Egypt, and in Asia Minor, where it is represented by the Beduin Arabs of Arabia. Other Caucasoid peoples are the Magyars, the Finns, and the Lapps, who show traces of Mongoloid mixtures, especially the last.

The Negroids are the peoples of Africa and Oceania, termed respectively the African Negroids and the Oceanic Negroids. The following African Negroid races are commonly recognized: Forest or West African or "True" Negro in West Africa, Sudanic in Central Africa, Nilotic in East Africa, Hamitic in Northeast and North Africa, Bantu (better Bantu-speaking) in South Africa, and Bushman-Hottentot in the Kalahari Desert of South Africa. The Oceanic Negroids are commonly called Melanesian or Papuan, and are found chiefly in Borneo, New Caledonia, the Solomons, the Hebrides and Fiji.

Of special interest among Negroids are Pygmies, who average about four feet in stature. They are found in Africa in the Congo region, in the Ituri Forest, and in Oceania on the Andaman Islands, the Malay Peninsula, the Philippines, and Borneo.

The Mongoloids are basically the peoples of Asia, but are also in the Western Hemisphere as the American Indians, and are represented in Malaysia and in Oceania. The Mongoloids are usually divided into the following races: Sinic of China and Japan, Palearctic of Siberia, Turkic and Tungic or Mongolic of Central Asia, and Malayan of Malaysia. In the Western Hemisphere they are found as Eskimos and the Indians of the Americas. In Polynesia, i.e., in Samoa, Tonga, Hawaii and west to Easter Island, the Mongoloid stock is a basic element, with some Caucasoid and some Negroid (Melanesian?) admixture.

The Archaic Caucasoids are found in Australia as the Australian aborigines and in Japan as the Ainu. They may possibly be an element in Melanesia and in Ceylon and South India, e.g., the Toda, the Veddha, and other tribes.

This is a brief survey of the "stocks" and "races" of the world. There is much inter-mixing and some over-lapping. This leads to two very important biological observations: 1) *there are no pure races*; 2) *there are no superior or inferior races*. We know from history that all peoples, upon contact, have crossed their genetically-based physical traits. We know from human anatomy that in fundamental structure all peoples are identical.

As far as biological Man is concerned, what he is is related to his cultural environment, rather than to any innate (or inherited) ability or aptitude. There is no "German race," only a German nationality; there is no "Jewish race," only a Jewish socio-religious community; there is no "Aryan race," only an Aryan language; there is no "master race," only a political bombast!

RELIGION

Principal Religions of the World

Source: Encyclopaedia Britannica.

Note: Statistics of the world's religions are at best rough approximations. The table which follows is based on the most reliable data of 1942 and 1943; it does not take into account the mass deaths and dislocations resulting from World War II and from Hitler's "Judenrein" policy. Aside from the latter religion, however (see footnote below table), the data are believed to be reasonably accurate as of 1947.

*The total number of Jews throughout the world at the beginning of 1947 was estimated between 11,000,000 and 12,000,000. Practically the entire loss was in Europe (about 3,000,000 in Poland alone). It is estimated that 1,000,000 Jews escaped Nazi-dominated Europe.

History of Leading Religious Groups in the United States

Source: Yearbook of American Churches and Christian Herald.

(The churches or religious bodies listed below are those with memberships of 50,000 or over—54 denominations out of more than 200. However, these 54 churches have over 80 percent of the total church membership. The memberships shown are the 1947 figures reported to the Christian Herald, New York, by official statisticians of the various religious groups.)

Baptist

American Baptist Association.—A group of independent Missionary Baptist churches in the Southwest, organized into an association in 1905. They adhere strictly to the apostolic order of church polity and cooperation. Members: 115,022.

Free Will Baptists.—This is a body of Arminian Baptists centering in North Carolina, where the first church of this group was organized in 1727. Members: 221,317.

National Baptist Convention, U.S.A., Inc.—The older and parent convention of Negro Baptists. This body is to be distinguished from the National Baptist Convention of America, usually referred to as the "unincorporated" body. The "incorporated" convention is a constituent member of the Federal Council of the Churches of Christ in America. Members: 4,122,315.

National Baptist Convention of America.—This is a body usually referred to as the

"unincorporated" convention, not to be confused with the "incorporated" National Baptist Convention, U.S.A., Inc., from which this body withdrew. Organized in 1895. Members: 2,575,621.

National Baptist Evangelical Life and Soul Saving Assembly of U.S.A.—Organized in 1921 by A. A. Banks, Sr., as a charitable, educational, and evangelical organization. Members: 70,843.

Northern Baptist Convention.—The early historical local independency of Baptist churches in America tended to impede the formation of any general organization until in 1814 a General Missionary Convention was formed to permit Baptists to express themselves in terms of missionary activities. In 1845, the state conventions in the South withdrew to organize the Southern Baptist Convention. In 1907, the Northern Baptist Convention was organized, a delegated body under whose direction the many agencies of the Baptists in the North and West now operate. Members: 1,592,349.

Primitive Baptists.—A large group of Baptists, largely through the South, who are opposed to all centralization, to modern

missionary societies, and to Sunday schools. They are sometimes called "anti-missionary" Baptists. Members: 69,157.

Southern Baptist Convention.—In 1845, Southern Baptists withdrew from the General Missionary Convention over the question of slavery and other matters and formed the Southern Baptist Convention. Members: 6,079,305.

The United American Free Will Baptist Church.—A body which set up its organization in 1901. Though ecclesiastically distinct, they are in close relations with the Free Will Baptists. Members: 75,000.

Catholic and Orthodox

Greek Orthodox Church (Hellenic).—Greek-speaking Orthodox Christians have had scattered parishes in the U. S. for the past seventy years. These were first under the jurisdiction of the Metropolitan of Athens and later under the Patriarchate of Constantinople. Political changes in Europe have been reflected in this country and have brought difficulties in all branches of the Orthodox Church. In 1931, a general convention held in New York City under the presidency of Archbishop Athenagoras brought a large measure of unity and order. Members: 275,000.

Polish National Catholic Church.—After a long period of dissatisfaction with Roman Catholic Administration in many Polish parishes, this group was organized in 1904. Members: 250,000.

The Roman Catholic Church.—The largest single group of Christians in the U. S., the Roman Catholic Church is under the spiritual leadership of Pope Pius XII. This group dates back to the priests who accompanied Columbus on his second voyage to the New World. A settlement, later discontinued, was made at St. Augustine, Fla. The continuous history of this Church in the colonies began at St. Mary's in 1634, in Maryland. Members: 24,402,124.

Russian Orthodox Church.—The Russian Orthodox Church entered Alaska in 1792 before its purchase by the United States. In 1872, its headquarters were moved to San Francisco and in 1905 to New York. Members: 300,000.

Lutheran

American Lutheran Church.—This Church is a constituent body of the American Lutheran Conference. It is itself the result of the merger in 1930 of the Evangelical Lutheran Joint Synod of Ohio and Other States (org. 1918), the Evangelical Lutheran Synod of Iowa and Other States (org. 1854), and the Lutheran Synod of Buffalo (org. 1845). Members: 601,839.

Evangelical Lutheran Augustana Synod of North America.—This group, whose constituency originally was of Swedish extraction, is a member of the American Lutheran Conference and is also a participating body in the National Lutheran Council. Organized in 1860. Members: 396,999.

Evangelical Lutheran Church.—In 1917 the United Norwegian Church, the Norwegian Synod and the Hauge Synod united under the name, Norwegian Lutheran Church of America. In 1930 this group became a constituent part of the American Lutheran Conference. The new name, The Evangelical Lutheran Church, was adopted at its General Convention in 1946. Members: 661,355.

The Evangelical Lutheran Joint Synod of Wisconsin and Other States.—This group, a constituent part of the Synodical Conference, was organized in Wisconsin in 1850. Members: 259,097.

Evangelical Lutheran Synod of Missouri, Ohio and Other States.—This group, the largest constituent part of the Synodical Conference, was organized in 1847, holds to an unwavering confessionalism and is the leader in the conservative group among the Lutherans. Members: 1,422,513.

United Lutheran Church in America.—This group dates back to the Ministerium of Pennsylvania, organized in 1748, and beyond that to early colonial days. It represents the union of the General Synod, the General Council, and the United Synod of the South in 1918. Members: 1,748,183.

Methodist

African Methodist Episcopal Church.—This group was formed in Philadelphia in 1816 and extended throughout the South after the Civil War. Members: 868,735.

American Zion Church.—Until recently known as The African Methodist Episcopal Zion Church. The group was organized in 1796, coming out of the John Street Methodist Church, New York. Members: 489,244.

Colored Methodist Episcopal Church.—In 1870, the General Conference of the M.E. Church, South, approved the request of its colored membership for the forma-

Growth of Church Membership, U. S., 1946-47

*This table is based only on statistics for the 54 denominations with greater than 50,000 members each. However, the above total represents well over 90 percent of the total U. S. church membership, the remainder of which is found in more than 200 smaller denominations. Many churches do not offer new figures each year.

tion of their conferences into a separate ecclesiastical body. Members: 381,000.

The Methodist Church.—In April, 1939, the Uniting Conference forming The Methodist Church was held by representatives of the Methodist Episcopal Church, the Methodist Episcopal Church, South, and the Methodist Protestant Church. The Methodist Church in the United States originated with the efforts of John and Charles Wesley, leaders of the revival movement in England in the eighteenth century. Methodist emigrants from Ireland planted Methodism in America about 1760. In 1771 Francis Asbury, one of Wesley's preachers, later a Bishop, landed in Philadelphia. The Methodist Episcopal Church was organized in 1784-85. The Methodist Episcopal Church, South, dated from 1846, the separation from the Methodist Episcopal Church having taken place over the slavery issue. The Methodist Protestant Church dated from 1830, was organized over the issue of lay representation. Members: 8,430,146.

Presbyterian

Cumberland Presbyterian Church.—In 1806, a presbytery (Cumberland) of the Presbyterian Church was dissolved by the Synod of Kentucky on account of its attitude toward revivalism. Members of the presbytery organized as an independent body in 1810 and became the Cumberland Presbyterian Church. When this body attempted to reunite with the Presbyterian Church in 1906, a minority preferred to continue as an independent church as above. Members: 75,427.

Presbyterian Church in the U. S.—This group is the branch of the Presbyterian Church which separated from the main body at the time of the Civil War. It is often called the "Southern" Presbyterian Church. Members: 596,037.

Presbyterian Church in the United States of America.—This group, distinguished by its representative form of government and its Calvinistic theology, appeared among the earliest colonists of America. Its first church was established about 1640, its first presbytery in 1706. Members: 2,174,530.

United Presbyterian Church of North America.—This group dates back to the Reformed Presbyterian (Covenanter) Church (1643) and the Associate Presbyterian (Seceder) Church (1733), both of Scotland. These two groups appeared in America in 1774 and 1753 respectively. They united and became the Associate Reformed Presbyterian Church in 1782. A minority, however, continued as the Associate Presbyterian Church. In 1858 the two groups united and became the United Presbyterian Church. Members: 198,815.

Others

Assemblies of God.—Independent, pentecostal, evangelical, missionary churches

associated for cooperative effort in district and general councils. Organized in Arkansas in 1914. Members: 241,782.

Buddhist Churches of America.—Organized in 1914 as the Buddhist Mission of North America, this group was incorporated in 1942 under the present name and represents Buddhism in this country, the faith based on "the anatman doctrine, supplemented by the idea of karma, and nirvana the holy ease or a blissful mental state of absolute freedom from evil." Members: 70,000.

Christian Reformed Church.—A group of Dutch Calvinists which dissented from the Reformed Church in America in 1857 and which was strengthened by later accessions from the same source and by immigration. Members: 134,608.

Church of Christ, Scientist.—Founded by Mary Baker Eddy in 1879. As defined by Mrs. Eddy, Christian Science is the scientific system of divine healing and the reinstatement of primitive Christianity. Number of churches and societies: 2,902.

Church of God.—This body, to be differentiated from the Church of God with headquarters at Anderson, Ind., is a holiness group and pentecostal. It began in 1886 in Tennessee, under the name of Christian Union, reorganized in 1902 as the Holiness Church. In 1907 it adopted the name above. Members: 77,926.

Church of God (Anderson, Ind.).—This group is one of the largest of the groups which have taken the name "Church of God." Its headquarters are at Anderson, Ind. It originated about 1880, now emphasizes Christian unity. Members: 95,325.

Church of God in Christ.—Organized in Arkansas in 1895, by C. P. Jones and C. H. Mason, who believed there was no salvation without holiness; incorporated 1897. Members: 300,000.

Church of the Brethren (Conservative Dunkers).—German pietists from Crefeld, Germany, under the leadership of Peter Becker, entered the colonies in 1719, and settled at Germantown, Philadelphia, Pa. They were called Dunkers (baptizers) and were immersionists. The members are conservative as to attire, oaths or affirmations, resistance to force, temperance, and the like. Members: 182,497.

Church of the Nazarene.—One of the larger holiness bodies, organized in Chicago, Oct., 1907. It is in general accord with the early doctrines of Methodism and emphasizes entire sanctification. Members: 201,487.

Churches of Christ.—This body is made up of a large group of churches, formerly reported with the Disciples of Christ, but since the religious census of 1906, reported separately. They are strictly congregational and have no organization larger than the local congregation. Members: 309,551.

Congregational Christian Churches.*—Congregational churches date back to the Pilgrim Fathers and the early colonists of New England in 1620. The Christian churches date back to the Wesleyan and revival movements at the end of the eighteenth century. These two groups of churches were merged at Seattle, Wash., in 1931. Members: 1,140,824.

Disciples of Christ.—In the revival period of the early nineteenth century, a movement under Thomas Campbell and his son, Alexander, resulted in the establishment of a fellowship called Christians or Disciples, believing that sects are unscriptural, they were biblicalists and immersionists. Members: 1,889,066.

Evangelical and Reformed Church.*—This body was formed on June 26, 1934, at Cleveland, Ohio, by a union of the Evangelical Synod of North America and the Reformed Church in the United States. The union was unique in that it left all details to be adjusted afterwards. The constitution was declared in effect at the General Synod which met at Lancaster, Pa., in June, 1940. The merged boards were organized and on February 1, 1941, took over the work of the two former denominations. Members: 695,029.

The Evangelical United Brethren Church.—This group had its origin in Johnstown, Pa., November 16, 1946, in the consummation of organic union between the Evangelical Church and the Church of the United Brethren in Christ. Both these former communions had their beginning in Pennsylvania in the evangelistic movement of the early 19th century. Jacob Albright was the founder of the Evangelical Church, and Dr. Philip William Otterbein was the founder of the United Brethren Church in 1800. In doctrine this Church is Arminian and in government Methodist. Members: 55,102.

Federated Churches.—Actually not a denomination but a group of local churches in various parts of the country, federated under the above name. Members: 88,411.

Friends, Religious Society of (Five Years Meeting).—In 1902, twelve of the fourteen early meetings of Friends entered into a loose confederation, forming the Five Years Meeting. Two of the original meetings (Kansas and Oregon) have withdrawn. Idaho and Philadelphia never joined. Together, however, these yearly meetings aside from Philadelphia Yearly Meeting, (N. C. St.) and the Five Years Meeting form what is known as the Orthodox group of Friends. Members: 113,465.

Independent Fundamental Churches of America.—Organized in 1930, at Cicero, Ill.,

A proposal of merger of the Evangelical and Reformed Church and the Congregational Christian churches will be voted on by the two organizations June, 1948. If the merger is completed, the new group will be known as the United Church of Christ.

by representatives of various independent churches. Members: 65,000.

Jewish Congregations.—Jews arrived in the colonies before 1650. The first congregation is recorded in 1656, in New York City, the Shearith Israel (Remnant of Israel). Members: 4,641,000.

Latter-Day Saints, Church of Jesus Christ of.—A group in which the Bible, the Book of Mormon, the Doctrine and Covenants and the Pearl of Great Price are regarded as the word of God. The primitive church organization is sought and the same gifts of tongues, prophecy, revelation, visions, healings and interpretation of tongues are continued. Members: 911,279.

Latter-Day Saints, Reorganized Church of Jesus Christ of.—A division among the Latter-Day Saints (Mormons) occurred on the death of Joseph Smith in 1844. His son, Joseph Smith, became presiding officer of this group, which has headquarters at Independence, Mo. Members: 116,888.

Mennonite Church.—The largest group of the Mennonites who began arriving in the U. S. in 1683, settling in Germantown, Pa. They derive their name from Menno Simons, their outstanding leader, born 1496. Members: 52,596.

The Protestant Episcopal Church.—This group entered the colonies with the earliest settlers as the Church of England. It became autonomous and adopted its present name in 1789. Members: 2,155,514.

Reformed Church in America.—This group was established by the earliest Dutch settlers of New York as the Reformed Protestant Dutch Church in 1628. It embraces many of the historic early colonial churches of New York and New Jersey and today has many strong churches in the middle and far west. Members: 176,244.

The Salvation Army.—An evangelistic organization, with a military government, first set up by General William Booth (1829-1912) in England and introduced into America in 1880. Members: 205,881.

Seventh Day Adventists.—This body developed out of the Adventist movement (1833-1844), which emphasized the imminent personal return of Jesus Christ. It emphasized the observance of the seventh-day Sabbath and in 1863 was numerous enough to organize a conference. At present it has twelve world divisions and carries on extensive publishing and medical work. Members: 208,030.

Spiritualists, International General Assembly of.—Organized in Buffalo, N. Y., in 1936 for the purpose of chartering Spiritualist churches. Members: 100,000.

Unitarian Association, American.—The Unitarian movement in Congregationalism, beginning in the eighteenth century, produced the American Unitarian Association in 1825. In 1865 a national conference was organized. Members: 74,789.

History of the Christian Church in England

- 304(?) St. Alban martyred.
 400(?) Ninian founds church in Scotland.
 432(?) St. Patrick begins conversion of Ireland.
 5th century Arrival in England of Angles, Saxons and Jutes. Church isolated from Rome.
 597 Augustine sent to convert Saxons.
 601 Augustine made Archbishop by Pope.
 1170 Murder of Archbishop Becket.
 1172 Becket is canonized.
 1534 Parliament passes Act of Supremacy, making king head of Church of England.
 1554 Church again united with Rome under reign of Mary.
 1558 Church restored to Crown at accession of Elizabeth.
 1611 King James Version published.
 1646 Puritan rebellion. Presbyterianism becomes state religion.
 1660 Restoration. Power of Church of England restored under Charles II.
 1673 Test Act passed by Parliament. Excludes nonconformists and Roman Catholics from public office.
 1701 Act of Succession. All future sovereigns must belong to Church of England.
 1739 John Wesley founds Methodism.
 1828 Repeal of Test Act
 1829 Catholic emancipation.
 1833-45 Oxford Movement attempts to bring Church of England closer to ideals of ancient Church. Movement largely destroyed by conversion of Newman and others to Roman Catholicism.

In Service in United States

- James C. Baker, 125 East Sunset Blvd., Los Angeles, Calif.
- Bruce R. Baxter, First Methodist Church, 1219 S. W. Taylor St., Portland 5, Oreg.
- Charles W. Brashares, 3520 Grand Ave., Des Moines, Iowa.
- Robert N. Brooks, 631 Baronne St., New Orleans 13, La.
- Fred Pierce Corson, 1701 Arch St., Philadelphia 3, Pa.
- Ralph S. Cushman, 1987 Summit Ave., St. Paul, Minn.
- U. V. W. Darlington, 524 Tenth Ave., Huntington, W. Va.
- Charles W. Flint, 100 Maryland Ave., N.E., Washington 2, D. C.
- Wilbur E. Hammaker, 317 Trinity Bldg., Denver, Colo.
- Costen J. Harrell, 516 N. 22d St., Birmingham, Ala.
- Lewis O. Hartman, 531 Boylston St., Boston 16, Mass.
- Ivan Lee Holt, 506 Olive St., St. Louis, Mo.
- Edward W. Kelly, 2731 Pine St., St. Louis 8.
- Paul B. Kern, 810 Broadway, Nashville 2, Tenn.
- W. Earl Ledden, 317 East Jefferson St., Syracuse 2, N. Y.
- Titus Lowe, 305 Underwriters Bldg., Indianapolis, Ind.
- J. Ralph Magee, 77 W. Washington, Chicago 2, Ill.
- Paul E. Martin, 723 Center St., Little Rock, Ark.

William C. Martin, 810 National Bank of Topeka Bldg., Topeka, Kans.

Thur J. Moore, 63 Auburn Ave., N.E., Atlanta, Ga.

Bromley Oxnam, 150 Fifth Ave., New York 11, N. Y.

William Walter Peele, Hotel Jefferson, Richmond 16, Va.

Are Purcell, 2020 Roswell Ave., Charlotte 1, N. C.

G. Richardson, First National Bank Bldg., Madison 1, Wis.

Charles C. Selecman, 6001 Hillcrest, Dallas, Tex.

Alexander P. Shaw, 1206 Etting St., Baltimore 17, Md.

Frank Smith, 2308 Southmore Blvd., Houston, Tex.

Lester Smith, 44 East Broad St., Columbus 15, Ohio.

Angie Smith, 224 N.W. 19th St., Oklahoma City, Okla.

Jones H. Straughn, Methodist Center, Smithfield St. at Seventh Ave., Pittsburgh, Pa.

Raymond J. Wade, 1205 Kales Bldg., 76 W. Adams Ave., Detroit 26, Mich.

William T. Watkins, 1115 Fourth Ave., Louisville, Ky.

In Service Abroad

Well S. Booth, B.P. 522, Elisabethville, Belgian Congo, Africa.

Paul N. Garber, Route de Malignou 17, Geneva, Switzerland.

Willis J. King, Monrovia, Liberia, West Africa.

Edwin F. Lee, 5 Mt. Sophia, Singapore, S. S., Malaya.

Central Conference Bishops

D. D. Alejandro, Methodist Mission, Manila, Philippine Islands.

Theodore Arvidson, Sibyllegatan 18, Stockholm, Sweden.

Enrique C. Balloch, Casilla 67, Santiago, Chile.

W. Y. Chen, 10 Dai Chia Hang, Chungking, Axc., China.

Z. T. Kaung, Methodist Mission, Chungking, Sze., China.

Carleton Lacy, The Methodist Church, Foochow, Fukien, China.

Shot K. Mondol, Methodist Church, Hyderabad, India.

J. Waskom Pickett, 12 Boulevard Road, Delhi, India.

Clement D. Rockey, 37 Cantonment Road, Lucknow, India.

J. W. Ernst Sommer, 80 Ginnheimer Landstrasse, Frankfurt am Main, Ginnheina, Germany.

John A. Subhan, Robinson Memorial, Byculla, Bombay, India.

Ralph A. Ward, 150 5th Ave., New York 11.

Arthur F. Wesley, Rivadavia 4044, Buenos Aires, Argentina.

Roman Catholic Pontiffs

Source: National Catholic Almanac.

Authorities differ concerning the correct list of the Popes. The following is the official list printed in *Annuario Pontificio* and taken from a series of portraits in the Basilica of St. Paul near Rome. On January 18, 1947, Monsignor Mercati presented Pope Pius XII with the only copy thus far dated of a new official Directory. This drops six Popes, places two in doubt, and adds two. Information is changed on 74 Popes, ranging from corrections in dates to the assertion that Pope Domnus II never existed. Designation of sainthood is removed from four Popes, and thirty-seven anti-Popes are added.

Name	Birthplace	Accession	Death	Name	Birthplace	Accession	Death

Religious and Secular Holidays, 1948

NEW YEAR'S DAY—Thursday, Jan. 1—A legal holiday in all states and the District of Columbia, New Year's Day has its origin in Roman times, when sacrifices were offered to Janus, the two-faced Roman deity who looked back on the past and forward to the future.

EPIPHANY—Tuesday, Jan. 6—The Feast of the Epiphany, falling on the twelfth day after Christmas, is observed by all branches of the Christian Church as the anniversary of the baptism of Jesus and His manifestation as the Son of God. This day is also the end of the Advent season and as "Twelfth Night" marks the beginning of the carnival season preceding Lent.

SHROVE TUESDAY—Feb. 10—Falls on the Tuesday before Ash Wednesday. The word derives from the Anglo-Saxon, *scrifan*, meaning to "shrive" or to be confessed. The day is sometimes familiarly referred to as "Pancake Tuesday" by the English and was suggested by the need of using up the eggs and fat which were prohibited articles of diet during the 40 days of Lent. The day is occasioned by a carnival spirit (Mardi Gras, in France). In the United States, the celebration, marking the end of the carnival season, which began at the end of Advent, reached its highest popularity in New Orleans.

ASH WEDNESDAY—Feb. 11—The Wednesday after Quinquagesima Sunday upon which begins the fast of the Lenten season. The name, from *dies cinerum*, meaning "day of ashes" is found in the earliest copies of the Gregorian Sacramentary and probably dates from at least the 8th century. The ceremony is featured by marking a cross on the foreheads of Roman Catholic worshippers by a priest who dips his thumb in ashes of burned remains of the palms used in the Palm Sunday the year before. The Protestant Church also observes the holiday but, for the most part, does not include the use of ashes.

LINCOLN'S BIRTHDAY—Thursday, Feb. 12—Observed as a legal holiday in Alaska, California, Colorado, Connecticut, Delaware, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Dakota, Ohio, Oregon, Pennsylvania, South Dakota, Tennessee, Utah, Washington, West Virginia and Wyoming. In Massachusetts, the Governor issues a proclamation.

ST. VALENTINE'S DAY—Saturday, Feb. 14—A day long held sacred to lovers, St. Valentine's Day may have come from the belief that on February 14, birds begin to mate, although this theory has no more validity than others that have been advanced. It is notable nowadays for the sending of a valentine, generally a card embossed with a heart, to a loved one.

WASHINGTON'S BIRTHDAY—Sunday, Feb. 22—The birthday of George Washington is celebrated as a legal holiday in every state of the Union, the District of Columbia and all territories. The observance began in 1796, three years before Washington's death.

ST. PATRICK'S DAY—Wednesday, March 17—St. Patrick, patron saint of Ireland, who died 493 A.D. at the venerable age of 106, has been honored in America since the first days of the nation. There are many dinners and meetings and perhaps the most notable part of the observance is the annual St. Patrick's Day parade on Fifth Avenue in New York City.

PALM SUNDAY—March 21—Is observed the Sunday before Easter to commemorate the entry of Jesus into Jerusalem. The procession and the ceremonies introducing the benediction of palms probably had their origin in Jerusalem. It seems certain that the bearing of the palms during services was the earlier practice, then came the procession, and later the benediction of the palms.

GOOD FRIDAY—March 26—The Friday before Easter Sunday, observed by all branches of the Christian Church in commemoration of the Crucifixion, which is retold during services from the Gospel of St. John. It is the only day of the year upon which Mass may not be said and only those who are in danger of death may receive Holy Communion. The eating of hot cross buns on this holiday is said to have originated in England.

EASTER SUNDAY—March 28—Observed in all Christian churches, Easter is the principal feast of the ecclesiastical year, and commemorates the Resurrection of Jesus. It is celebrated on the first Sunday after the full moon which occurs on or next after March 21 and is therefore celebrated between March 22 and April 25 inclusive. This date was fixed by the Council of Nicaea in 325. The Venerable Bede, the

English monk and ecclesiastical historian, claimed the word to have originated from the Anglo-Saxon *Eostre*, old Teutonic goddess of spring.

FIRST DAY OF PASSOVER (Pesach)—Saturday, April 24—The Feast of the Passover, also called the Feast of Unleavened Bread, observed for eight days of which only the first and last days are holy days, commemorates the escape of the first-born of the Jews from the Angel of Death, who took from the Egyptians their first-born, thus fulfilling the prophecy of Moses. As they fled Egypt, the Jews ate unleavened bread and from that time the Jews have allowed no leavening in the home during Passover, the bread being replaced by matzoth.

ASCENSION DAY—Thursday, May 6—Took place in the presence of His apostles 40 days after the Resurrection of Jesus. It is traditionally held to have occurred on Mount Olivet in Bethany.

PENTECOST (Whitsunday)—May 16—This day commemorates the descent of the Holy Ghost upon the Apostles fifty days after the resurrection. The sermon by the Apostle Peter, which led to the baptism of 3000 who professed belief, originated the ceremonies that have since been followed. "Whitsunday" is believed to have come from "white Sunday" when, among the English, white robes were worn by those baptised on the day.

MEMORIAL DAY—Sunday, May 30—Also known as Decoration Day, Memorial Day is a legal holiday in all the northern states and in the territories, and is also observed by the armed forces. In 1868, General John A. Logan, Commander in Chief of the Grand Army of the Republic, issued an order designating the day as one in which the graves of soldiers would be decorated. The holiday was originally devoted to honoring the memory of those who fell in the war between the states, but is now so dedicated to the memory of the dead in all wars.

HEBREW PENTECOST (Shabuoth)—Sunday, June 13—The Feast of Harvest, in olden times observed at the end of the wheat harvest. The holiday is sometimes celebrated by decorating houses and synagogues with branches of trees, flowers and various plants. The word originates from the Greek, meaning fifty, and the day comes fifty days after Passover.

FLAG DAY—Monday, June 14—Flag Day is not a legal holiday but is universally observed throughout the country, particularly in schools. The date originates in the resolution adopted on June 14, 1777.

INDEPENDENCE DAY—Sunday, July 4—The day of the adoption of the Declaration of Independence in 1776, celebrated in all states and territories. The observance began in the next year in Philadelphia.

LABOR DAY—Monday, Sept. 6—Observed the first Monday in September in all states and territories, Labor Day was first celebrated in New York in 1882 under the sponsorship of the Central Labor Union, following the suggestion made earlier in the year by Peter J. McGuire, of the Knights of Labor, that the day be set aside in honor of labor.

JEWISH NEW YEAR (Rosh Hashanah)—Monday, Oct. 4—Based on the lunar calendar, Rosh Hashanah is the first of ten penitential days ending in the Day of Atonement.

COLUMBUS DAY—Tuesday, Oct. 12—A legal holiday in thirty-four states, commemorating the discovery of America by Columbus in 1492. Quite likely the first celebration of Columbus Day was that organized in 1792 by the Society of St. Tammany, or Columbian Order, more widely known as Tammany Hall. In 1892, a statue of Columbus was erected at the entrance to Central Park, just above Fifty-ninth Street, New York, and the plaza there was renamed Columbus Circle.

DAY OF ATONEMENT (Yom Kippur)—Wednesday, Oct. 13—The holiest day of the Jewish year, observed over the centuries since the day was set aside by Moses, according to Biblical belief. All Jews refrain from daily pursuits and since the holiday begins at sundown of the preceding evening, fasting and services in the synagogues begin then and continue to the sundown of the following evening.

FEAST OF THE TABERNACLES (Suk-koth)—Monday, Oct. 18—The name comes from the booths or tabernacles, in which Jewish families lived while they gathered the harvest. One of the ancient customs still preserved in connection with this festival, which lasts eight days, is the hanging of fruits in synagogues to signify the harvest. Orthodox Jews still continue to build small huts in their back yards or on the roofs of houses.

ELECTION DAY (in certain states)—Tuesday, Nov. 2—Since 1845, by Act of Congress, the first Tuesday after the first Monday in November is the date for choosing Presidential electors. State elections are also generally held on this day.

ARMISTICE DAY—Thursday, Nov. 11—Commemorates the signing of the Armistice ending World War I in 1918. A Congressional resolution in 1926 directed the President to issue a proclamation annually for observance of the day. It is a legal holiday in many states and in others observance is asked by proclamation of the governors. As part of the day's observance, two minutes of silence are included in the ceremonies honoring the memories of the war dead. The most notable observance is at the Tomb of the Unknown Soldier in Arlington Cemetery, in Arlington, Va.

THANKSGIVING—Thursday, Nov. 25—Observed nationally on the fourth Thursday in November by Act of Congress (1941), the first such national proclamation having been issued by President Lincoln in 1863, on the urging of Mrs. Sarah J. Hale, editor of "Godey's Lady's Book" who long had pressed for a national day of thanksgiving. Most Americans believe that the holiday dates back to the day of thanks ordered by Governor Bradford of Plymouth Colony in New England in 1621 but scholars point out that days of thanks stem from ancient times.

FIRST SUNDAY IN ADVENT—Nov. 28—Advent is the season in which the faithful must prepare themselves for the advent of the Savior on Christmas. The four Sundays before Christmas are marked by special church services.

CHRISTMAS (Feast of the Nativity)—Saturday, Dec. 25—The most important and the most widely celebrated holiday of the Christian year, it is observed as the anniversary of the birth of Jesus. Christ-

mas customs are centuries old. The mistletoe, for example, comes from the Druids, who, in hanging the mistletoe, hoped for peace and good fortune. Use of such plants as holly comes from the ancient belief that such plants blossomed at Christmas. Comparatively recent is the Christmas tree, first set up in Germany in the 17th century, and the use of candles on trees developed from the belief that candles appeared by miracle on the trees at Christmas. The Germans also gave us the legend of Santa Claus, corrupted from St. Nicholas.

HANUKKAH (Festival of Lights)—Monday, Dec. 27—An eight-day festival, Hanukkah commemorates the purification of the Temple of Jerusalem after it had been desecrated by Antiochus Epiphanes, who set up a pagan altar there in 168 B.C. Eight lamps illuminated the temple and these have been memorialized in the Hanukkah lights, one for each night of the festival, which are lighted in Jewish homes and special prayers said.

U. S. Postal Regulations

First Class (limit 70 pounds):

Letters and written and sealed matter, 3 cents for each ounce, local and non-local, except that drop letters are subject to 1 cent for each ounce when deposited for local delivery at offices not having letter-carrier service, provided they are not collected or delivered by rural or star-route carriers.

Government postal cards, 1 cent.

Private mailing or post cards, 1 cent.

Air Mail (limit 70 pounds):

Five cents for each ounce or fraction thereof within the continental United States, within any Territory or possession of the United States, within any geographical area which is a protectorate of the United States, or between any of the foregoing. This includes air mail to or from Alaska, Hawaii, Puerto Rico, Virgin Islands of the United States, Canton Island, Canal Zone, Guam and any other place where the United States mail service is in operation.

Second Class (no limit of weight):

Newspapers, magazines, and other periodicals containing notice of second-class entry, 1 cent for each 2 ounces or fraction thereof, or the fourth-class rate, whichever is lower.

Third Class (limit 8 ounces):

Circulars and other miscellaneous printed matter, also merchandise, $1\frac{1}{2}$ cents for each 2 ounces.

Books (including catalogues) of 24 pages or more, seeds, cuttings, bulbs, roots, sections and plants, 1 cent for each 2 ounces.

Identical pieces of third-class matter may be mailed under permit in bulk lots of not less than either 20 pounds or 200 pieces, at the rate of 12 cents a pound, or fraction thereof, in case of circulars, miscellaneous printed matter and merchandise, and 8 cents a pound, or fraction thereof, in the case of books or catalogues having 24 pages or more, seeds, plants, etc., with a minimum charge of 1 cent a piece in either case. Apply to postmaster for permit.

For conditions and restrictions governing mail to our armed forces overseas, consult postmaster.

Fourth Class (over 8 ounces):

Limit of size, 100 inches length and girth combined. Limit of weight, 70 pounds.

Merchandise, books, printed matter and all other mailable matter not in first or second class.

Special Rates For Books:

Books (containing no advertising matter other than incidental announcements of

books) all zones: 3 cents a pound plus 1 cent up to and including 16 pounds; 17 to 27 pounds, 3 cents a pound plus 2 cents; 28 to 38 pounds, 3 cents a pound plus 3 cents; 39 to 49 pounds, 3 cents a pound plus 4 cents; 50 to 61 pounds, 3 cents a pound plus 5 cents; 62 to 70 pounds, 3 cents a pound plus 6 cents.

Library Books:

Books sent by authorized libraries to readers and when returned by such readers, for delivery within the first three zones or the State in which mailed: 4 cents for the first pound and 1 cent for each additional pound up to and including 47 pounds; 52 cents for 48 pounds and 1 cent for each additional pound up to and including 70 pounds.

Special Delivery and Special Handling Fees:

The prepayment of the special-delivery fee on second-, third- or fourth-class mail entitles it to the most expeditious handling and transportation practicable, and also entitles it to special delivery at the office of address.

Parcels of fourth-class matter endorsed "Special Handling" will be given the most expeditious handling, transportation and delivery practicable (but not special delivery) upon payment in addition to the regular postage of the following charge:

Weight	Special delivery		Special handling
	First class	Second, third or fourth class	(Fourth class only)
Up to 2 pounds . . .	13¢	17¢	10¢
Over 2 pounds up to 10 pounds . . .	20¢	25¢	15¢
Over 10 pounds . . .	25¢	35¢	20¢

Registered, Insured and C. O. D. Mail:

The sending of registered or insured mail to Army and Navy personnel overseas is restricted. Consult postmasters for details. C. O. D. mail cannot be sent to Navy personnel on board ships or at overseas shore stations.

Registered Mail:

Fees for indemnity limited to:

\$ 5	\$.20	\$ 500	\$.95
5025	600	1.05
7535	700	1.15
10040	800	1.20

30065	1,000	1.35
40080		

Domestic registered mail is subject to surcharges in addition to regular registry fees as follows: When declared value exceeds maximum indemnity covered by registry fee paid by not more than \$50, 2

cents; over \$50, not over \$100, 3 cents; over \$100, not over \$200, 4 cents; over \$200, not over \$400, 6 cents; over \$400, not over \$600, 7 cents; over \$600, not over \$800, 8 cents; over \$800 but less than \$1,000, 10 cents. If excess of declared value over maximum indemnity covered by registry fee paid is \$1,000 or more, additional fees for each \$1,000 or part of \$1,000 are: For local delivery or delivery in 1st zone, 11 cents; 2d zone, 12 cents; 3d zone, 14 cents; 4th zone, 15 cents; 5th or 6th zone, 16 cents; 7th or 8th zone, 18 cents. In the case of nonnegotiable securities, surcharge is based on known or estimated cost of duplication.

Registration fee for mail without intrinsic value for which no indemnity is paid, 20 cents.

Insured Mail (third and fourth classes):

Fees for indemnity limited to:

\$ 5	\$.03	\$ 50	\$.15
\$2510	20025

C. O. D. Mail:

Unregistered (third and fourth classes and sealed matter of any class bearing postage at the first-class rate). Fees for collections and indemnity limited to:

\$ 2.50	\$.15	\$100	\$.50
520	15055
2530	20060
5040		

Domestic mail of any class sealed against inspection and bearing postage at the first-class rate may be sent as registered collect-on-delivery mail. The maximum amount collectible is \$200; maximum indemnity, \$1,000. For further details, consult postmaster.

A demurrage charge of 5 cents a day is collected on each C. O. D. article which the addressee fails to accept within 20 days after the first attempt to deliver or the first notice of arrival at the office of address is given.

Fee of 5 cents is charged for notifying sender of nondelivery of C. O. D. mail.

Return receipts for registered or insured mail: fee, if requested at time of mailing, 4 cents; after mailing, 7 cents; at time of mailing to show address of delivery, 31 cents.

An additional charge of 20 cents is made when registered, insured or C. O. D. mail is restricted in delivery to addressee only, or to the addressee or order.

Certificates of mailing for ordinary mail of any class and additional certificates for ordinary, registered, insured and C. O. D.

mail, 1 cent for each article described thereon.

Foreign Regular Mail

South and Central America (except European possessions), Canada, Newfoundland, Labrador, Cuba, Dominican Republic, Haiti, Andorra, and Spain: Letters, 3 cents an ounce or fraction; Post cards, 2 cents single, 4 cents reply-paid.

Other countries: Letters, 5 cents first ounce, 3 cents each additional ounce. Post cards, 3 cents single, 6 cents reply-paid.

Air Mail Postage Rates

Domestic (includes Alaska, Canal Zone, Canton Island, Guam, Hawaii, Midway Island, Puerto Rico, U. S. Virgin Islands, Wake Island), Canada and Mexico: FIVE cents (\$.05) per ounce.

Air mail addressed for delivery to APO's or Fleet Post Offices outside the continental United States care of Postmaster—FIVE cents (\$.05) per ounce—limit EIGHT ounces.

By air to U. S. Coast, or border, exchange offices and thence by ordinary means to destination, SEVEN cents (\$.07) per ounce or fraction. This rate includes air service in the United States and surface transportation onward to destination.

EXCEPTIONS (See Chart on opposite page)

In the first or second zone, where the distance by the shortest regular practicable mail route is 300 miles or more, the rate is the same as for the third zone. On parcels collected on rural routes, the postage is 2 cents less per parcel than at rates in table when for local delivery and 3 cents less per parcel when for other than local delivery. Parcels weighing less than 10 pounds, but exceeding 84 inches in length and girth combined, are subject to 10-pound rate. For special rates on catalogues, and other similar printed advertising matter, consult postmaster.

The Record

By Grantland Rice

*When the game is done and the players creep
One by one to the League of Sleep,
Deep in the night they may not know
The way of the fight, the fate of the foe.
The cheer that passed, and applauding hands,
Are stilled at last—but the Record stands.*

*The errors made, and the base hits wrought;
Here the race was run! There the fight was fought!
Yet the game is done when the sun sinks low
And one by one from the field they go;
Their day has passed through the Twilight Gates,
But the Scroll is cast—and the Record waits.*

*So take, my lad, what the Great Game gives,
For all men die—but the Record lives.*

BASEBALL

THE POPULAR TRADITION that baseball was invented by Abner Doubleday at Cooperstown, N. Y., in 1839, has been enshrined in the Hall of Fame and National Museum of Baseball erected in that town, but research has proved that a game called "Base Ball" was played in this country and England before 1839. However, the first team baseball as we know it was played at the Elysian Fields, Hoboken, N. J., on June 19, 1846, between the Knickerbockers and the New York Nine. There was a gradual growth of baseball and an improvement of equipment and playing skill in the next fifty years. Soldiers returning home from the Civil War spread over the country the game they had learned to play in their camps.

Historians have it that the first pitcher to throw a curve was William A. (Candy) Cummings in 1867. The Cincinnati Red Stockings were the first all-professional

team and in 1869 they played 64 games without a loss. The standard ball of the same size and weight, still the rule, was adopted in 1872. The first catcher's mask was worn in 1875. The National League was organized in 1876. The first chest protector was donned in 1885. The three-strike rule was put on the books in 1887 and the four-ball ticket to first base came in 1889. The pitching distance, formerly shorter, was lengthened to 60 feet 6 inches in 1893 and the rules have been only slightly modified since that time.

The American League, under the vigorous leadership of B. B. Johnson, blossomed forth as a major league in 1901. Judge Kenesaw Mountain Landis, by action of the two major leagues, became Commissioner of Baseball in 1921 and, upon his death (1944), Albert B. Chandler, former United States Senator from Kentucky, was elected to that office (1945).

Baseball Statistics

*When Berra hit a home run in the 7th of the 3d game, the official scorers ruled that he had pinch-hit for Catcher Lollar, whose place Berra took in the field. Thus Berra became the first pinch hitter to hit a homer in world series competition.

aWalked for Shea in 5th of 1st game, doubled for Chandler in 6th of 3d game, singled for Phillips in 3d of 6th game and doubled for Bevens in 4th of 7th game (set pinch-hitting record with 3 hits).

bWalked for Raschi in 3d of 3d game and lined out for Newsom in 6th of 6th game.

cFlied out for Drews in 4th of 3d game.

dSingled for Raschi in 7th of 6th game.

eForced A. Robinson for Wensloff in 9th of 6th game.

fWalked for Casey in 9th of 4th game and walked for Stanky in 7th of 5th game.

gDoubled for Stanky in 9th of 4th game and struck out for Casey in 9th of 5th game.

hRan for Edwards in 9th of 5th game.

iStruck out for Behrman in 7th of 1st game and ran for Reiser in 9th of 4th game.

jFlied out for Gregg in 7th of 2d game, walked for Gregg in 7th of 4th game and doubled for Behrman in 7th of 5th game.

kDoubled for Branca in 6th of 6th game.

lForced Jorgensen for Barney in 9th of 2d game, ran for Furillo in 9th of 4th game and walked for Hatten in 6th of 5th game.

mRan for Bragan in 6th of 6th game.

nStruck out for Barney in 7th of 7th game.

Triple play—Chicago.

Three No-hit Games in Majors

Ewell Blackwell of the Cincinnati Reds, Don Black of the Cleveland Indians and Bill McCahan of the Philadelphia Athletics, in that order, were the only pitchers in the majors to hurl no-hit no-run games during the 1947 season. Blackwell turned back the Boston Braves, 6 to 0, in a night game;

Triple plays—Pittsburgh, Chicago 2, St. Louis.

Black defeated the Athletics, 3 to 0, in a game that started in daylight and wound up with six innings being played under the lights because of a rainstorm which interrupted the contest for 45 minutes, and McCahan blanked the Washington Senators, 3 to 0, in a day game.

Giants Establish Slugging Mark

The New York Giants set a major league home-run record in 1947 with 221 circuit clouts. Johnny Mize, who tied Ralph Kiner for the major league individual crown, was high man with 51 four-baggers. Other big guns for the Giants were Willard Marshall with 36 homers, Walker Cooper, 35, and Bobby Thomson, 29.

Home-Run Record to Kiner

Ralph Kiner of the Pittsburgh Pirates, who tied with Johnny Mize of the New York Giants as major-league home-run king in 1947 with 51 circuit clouts, established a slugging mark last season by hitting eight homers in four games. The former record as seven, made by the late Tony Lazzeri as a member of the New York Yankees in 1936.

Ott Ends Playing Career

Mel Ott, manager of the New York Giants, retired as a player late last season after wearing a Giant uniform for 22 years. Ott made three appearances at the plate in 1947—popping up twice and grounding out—and did not play in the field at all. Among his 2876 hits were 511 home runs, a National League record.

Feller's Strikeout Record

300,825 See Labor Day Games

A single-day attendance record in the major leagues was set last Labor Day, Sept. 1, when the seven double-headers and the morning and afternoon games in

Brooklyn attracted 300,825 spectators. The previous mark for a single day was made on Memorial Day, 1947, when 283,370 saw the eight twin bills.

Longest Game in the Majors

The 26-inning 1-1 tie game between Brooklyn and Boston of the National League, played at Braves Field, Boston, on May 1, 1920, still stands as the longest contest in major league history. Both pitchers, Joe Oeschger of the Braves and Leon Cadore of the Robins, as they were then called because they were managed by Wilbert Robinson, went the distance. George (Miracle Man) Stallings guided Boston. The game was called because of darkness.

National League—New York Cubans
American League—Cleveland Buckeyes

TRACK AND FIELD

RUNNING, jumping, hurdling and throwing weights—track and field sports, in other words—are as natural to boys and young men as eating, drinking and breathing. Unorganized competition in this form of sport goes back beyond the Cave Man era. Organized competition begins with the first recorded Olympic Games in Greece, 776 B. C., when Coroebus of Elis won the only event on the program, a race of approximately 200 yards. The Olympic Games, with an ever-widening program of events, continued until “the glory that was Greece” had faded and “the grandeur that was Rome” was tarnished, and finally were abolished by decree of Emperor Theodosius of Rome in A. D. 394. The Tailteann Games of Ireland are supposed to have antedated the first Olympic Games by some centuries, but we have no records of the specific events and winners thereof.

Professional contests of speed and strength were popular at all times and in many lands, but the widespread competition of amateur athletes in track and field

sports is a comparatively modern development. The first organized amateur athletic meet of record was sponsored by the Royal Military Academy at Woolwich, England, in 1849. Oxford and Cambridge track and field rivalry began in 1864 and the English amateur championships were established in 1866. In the United States such organizations as the New York Athletic Club and the Olympic Club of San Francisco conducted track and field meets in the 1870's, and a few colleges joined to sponsor a meet in 1874. The success of the college meet led to the formation of the Intercollegiate Association of Amateur Athletes of America and the holding of an annual set of championship games beginning in 1876.

Many athletic clubs joined the National Association of Amateur Athletes of America, formed in 1879, but dissension broke up this organization and the Amateur Athletic Union, organized in 1888, has been the ruling body in American amateur athletics since that time.

James E. Sullivan Memorial Award Winners

Given annually to the amateur athlete voted by sports leaders as having done the most to advance the cause of sportsmanship.

Year	Winner	From	Sport
1930	Robert T. Jones, Jr.	Atlanta, Ga.	Golf
1931	Bernard E. Berlinger	Philadelphia	All-around athletics
1932	James A. Bausch	Kansas City, Mo.	All-around athletics
1933	Glenn Cunningham	University of Kansas	Middle-distance running
1934	William R. Bonthron	New York A. C.	Middle-distance running
1935	W. Lawson Little, Jr.	California	Golf
1936	Glenn Morris	Denver A. C.	All-around athletics
1937	J. Donald Budge	Oakland, Calif.	Tennis
1938	Donald R. Lash	Indiana State Police	Distance running
1939	Joseph W. Burk	Penn. A. C., Philadelphia	Rowing
1940	J. Gregory Rice	South Bend A. A., Ind.	Distance running
1941	Leslie MacMitchell	New York University	Middle-distance running
1942	Cornelius Warmerdam	San Francisco Olympic Club	Pole vaulting
1943	Gilbert L. Dodds	Boston Athletic Ass'n.	Middle-distance running
1944	Ann Curtis	Crystal Plunge S. C., San Francisco	Swimming
1945	Felix (Doc) Blanchard	U. S. Military Academy	Football
1946	Y. Arnold Tucker	U. S. Military Academy	Football

NATIONAL A. A. U. GYMNASIIC CHAMPIONS, 1947

Men

All-around—Frank Cumiskey, Swiss Gym. Society.
 Calisthenics—Roy Sorensen, Penn State.
 Long Horse—Robert C. Sears, Swiss Gym. Society, and Rudolph Hradecky, Bohemian Gym. Assn. (tie).
 Side Horse—Frank Cumiskey.
 Parallel Bar—Robert C. Sears.
 Horizontal Bar—Edward J. Scrobe, D. A. Turn Verein.
 Flying Rings—Waldimir Baskovich, Acrotheater, Univ. of Chicago.
 Tumbling—Charles W. Thomson, Berkeley, Calif.
 Rope Climb—Garvin E. Smith, Los Angeles City College.
 Indian Clubs—Edward A. Hennig, Cleveland East Side Turners.
 Team—Swiss Gymnastic Society, Union City, N. J.

Women

All-around—Helen Schifano, Elizabeth (N. J.) Turners.
 Calisthenics—Helen Schifano.
 Side Horse—Helen Schifano.
 Balance Beam—Clara Schroth, Phila. Turners.
 Flying Rings—Helen Schifano.
 Parallel Bars—Meta Neumann, Acrotheater, Univ. of Chicago.
 Indian Clubs—Margaret Dutcher, Ridgewood (N. J.) High.
 Tumbling—Jo Ann Matthews, Dallas A. C.
 Team Drill—Elizabeth (N. J.) Y. M. and Y, W. H. A.

WATER POLO, 1947

National A. A. U. Champions

Outdoor—Los Angeles A. C.
 Indoor—Beifuss Natatorium, Chicago.

Fernando Isais of Los Angeles won the 1947 world horseshoe pitching tournament, held at Salt Lake City, Utah, Aug. 25 to 30.

NATIONAL A. A. U. TRACK AND FIELD CHAMPIONS, 1947

Outdoor

100-m.—William Mathis, Urbana, Ill.
 200-m.—Barney Ewell, Shanahan C. C., Philadelphia.
 400-m.—Herb McKenley, University of Illinois.
 800-m.—Reginald Pearman, New York Pioneer Club.
 1500-m.—Gerald Karver, Penn State.
 3000-m.—Curtis C. Stone, Penn State.
 5000-m.—Edward O'Toole, New York A. C.
 10000-m. steeplechase—Forest Efav, Stillwater, Okla.
 100-m. walk—Ernest Weber, German-American A. C.
 10-m. high hurdles—Harrison Dillard, Baldwin-Wallace.
 100-m. low hurdles—Harrison Dillard.
 100-m. low hurdles—J. Walter Smith, Los Angeles A. C.
 High jump—David Albritton, Dayton, Ohio.
 Broad jump—Willie Steele, San Diego State.
 100-yd. hop, step, and jump—Bob Beckus, Los Angeles A. C.
 Shot-put—Francis Delaney, Olympic Club, San Francisco.
 16-lb. weight—Frank Berst, New York A. C.
 Pole vault—A. Richmond Morcom, New Hampshire State.
 Discus—Fortune Gordien, Minnesota.
 Javelin—Steve Seymour, Los Angeles A. C.
 Hammer—Robert H. Bennett, Apponaug, R. I.
 100-m. relay—San Antonio A. C.
 200-m. relay—Los Angeles A. C.
 400-m. relay—San Antonio A. C.
 Team—New York Athletic Club.
 Decathlon—Irving Mondschein, New York University.
 Pentathlon—John Voight, Baltimore.
 Marathon—Ted Vogel, Boston A. A.

Indoor

60-yd.—Ed Conwell, unattached, Jersey City.
 60-yd. high hurdles—Harrison Dillard, Baldwin-Wallace.
 60-yd. low hurdles—Harrison Dillard.
 600-yd.—George Guida, Villanova.
 1000-yd.—Bill McGuire, Jr., 69th Regt. A.A., New York.
 Mile run—Gilbert Dodds, Boston A.A.
 Mile walk—Ernest Weber, German-American A.C.
 Mile relay—Manhattan.
 2-mile relay—Fordham.
 3 miles—Curtis C. Stone, Penn State.
 Sprint medley relay—Manhattan.
 Broad jump—Herbert Douglas, Pittsburgh.
 High jump—John Vislocky, New York A.C.
 Shot-put—Irving Kintisch, unattached, Brooklyn.
 35-lb. weight—Henry Dreyer, New York A.C.
 Pole vault—Owen G. Smith, Olympic Club, San Francisco.
 Team—New York University.

Outdoor—Women

50-m.—Alice Coachman, Albany (Ga.) State College.
 100-m.—Juanita Watson, Tuskegee.
 200-m.—Stella Walsh, Polish Olympic A.C.
 80-m. hurdles—Nancy Cowperthwaite, German-American A.C.
 400-m. relay—Tuskegee A team.
 Broad jump—Lillie Purifoy, Tuskegee.
 High jump—Alice Coachman.
 Shot-put—Dorothy Dodson, Chicago Hurricanes.
 Javelin—Dorothy Dodson.
 Discus—Frances Kaszubski, Polish Olympic A.C.
 Baseball throw—Marion Barone, Phila. Turners.
 Team—Tuskegee Institute.

EASTERN COLLEGE CHAMPIONS, 1947

Boxing

125 lb.—Jerry Auclair, Syracuse
 130 lb.—Glenn Hawthorne, Penn State
 135 lb.—Jimmy Miragliotta, Virginia
 145 lb.—Willie Barnett, Virginia
 155 lb.—Billy Byrne, Syracuse
 165 lb.—Jackie Tighe, Penn State
 175 lb.—Carlo Ortenzi, Western Maryland
 Heavyweight—John McArdle, Syracuse
 (Edward J. Neil Trophy)—Syracuse

Swimming

100-yd. free style—Dick Morgan, Yale.
 200-yd. free style—Paul Girdes, Yale.
 400-yd. free style—Paul Girdes.
 800-yd. free style—Jeremy Gorman, Harvard.
 1500-yd. free-style relay—Yale.
 100-yd. backstroke—Allen Stack, Yale.
 200-yd. breast stroke—Joe Verdeur, LaSalle.
 100-yd. medley—Joe Verdeur.
 200-yd. medley relay—Rutgers.
 100-yd. dive—Ralph Burrati, Rutgers.
 200-yd. dive—Ernest G. Crone, North Carolina.
 400-yd. m.—Yale.

Wrestling

125 lb.—Pilgrim McRaven, Lehigh
 135 lb.—James Mohney, Penn State
 145 lb.—Leon Smith, Navy
 155 lb.—John Fletcher, Navy
 165 lb.—Stanley Thevent, Army
 175 lb.—Ed Ericson, Lehigh
 185 lb.—Robert Pickett, Syracuse
 Heavyweight—Henry O'Shaughnessy, Columbia
 m.—Lehigh

WEIGHT LIFTING CHAMPIONS, 1947

World

SWIMMING

THERE IS THE ancient tale of Leander of Abydos swimming the Hellespont nightly to call on Helen of Sestos but nobody kept the time on his trips. However, Lord Byron swam one leg of the old Leander course, Sestos to Abydos, on May 3, 1810, in 1 hour 10 minutes. The famous British poet was a noted swimmer and once, in an endurance trial at Venice, was in the water for 4 hours 10 minutes. Distance swimming was the early type of competition. Captain Matthew Webb achieved fame by being the first to swim the English Channel—Dover to Calais—in August, 1875, in 21 hours 45 minutes. Many other swimmers, men and women, have conquered the

Channel since that time. Gertrude Ederle, of New York City, was the first woman to accomplish the feat. Miss Ederle swam the Channel Aug. 6, 1926, in 14 hours 34 minutes, breaking the existing record at that time. Since then the record has been lowered by four or five men.

Regular competition at short as well as long distances and indoor as well as outdoor came with the development of such organizations as the Amateur Athletic Union and the building of indoor and outdoor swimming pools. Swimming has been on the Olympic program since the start of the modern Olympic Games at Athens in 1896.

 3-m. dive—Patsy Elsener, San Francisco.
 Team—Crystal Plunge.

THE OLYMPIC GAMES

THE first Olympic Games of which there is record occurred in 776 B. C. and consisted of one event, a great foot race of about 200 yards held on a plain by the river Alpheus (now the Ruphia) just outside the little town of Olympia in Greece. It was from that date that the Greeks began to keep their calendar by "Olympiads," the four-year spans between the celebrations of the famous games. There was as a religious as well as an athletic significance to the ancient games and the games, temples and sacred fires within the Olympic enclosure were the scenes of worship all through the year whereas the Olympic Games, at the height of their popularity, never lasted more than five days and were held only once every four years.

The competition was entirely amateur at the start and the only prizes were laurel wreaths. Only free Greek citizens were allowed to compete and they had to undergo a strict training course that lasted ten months. But civic rivalry led to trickery and professionalism and the

games became degraded after some centuries. When Rome conquered Greece, the Roman emperors turned the Olympic Games from patriotic, religious and athletic festivals into carnivals and circuses. They dragged on malodorously until they were finally halted by decree of Emperor Theodosius I of Rome in A. D. 394.

The modern Olympic Games, which started in Athens in 1896, are the result of the devotion of a French educator, Baron Pierre de Coubertin, to the idea that, since boys and athletics have gone together down the ages, education and athletics might well go hand-in-hand toward a better international understanding. He planned a revival of the ancient Olympic Games on a world-wide basis and succeeded in getting nine nations to send athletes to the first of the modern games in 1896. Since then more than 5,000 athletes representing 53 nations have competed in the games.

Interrupted for the second time by war, the modern Olympic Games will be resumed at London in 1948.

U. S. 1948 WINTER TEAMS

(Ski team listed on page 845)

Bobsledding

- No. 1 two-man—Tuffield Latour and Leo Martin, Saranac Lake, N. Y.
 No. 2 two-man—Fred Fortune, Jr., Lake Placid, N. Y., and Schuyler Carron, Ausable Forks, N. Y.
 No. 1 four-man—James Bickford, Pat Buckley, Donald Dupree and William Dupree, Saranac Lake, N. Y.
 No. 2 four-man—Francis Tyler, Pat Martin, William D'Amico, Lake Placid, N. Y., and Ed Rimkus, Schenectady, N. Y.
 Alternates—Bud Washbond, Keene Valley, N. Y.; Joe Meconi and Thomas Hicks, Lyon Mountain, N. Y.

Figure Skating**Men's Singles**

- Richard Button, Englewood, N. J.
 James Grogan, Berkeley, Calif.
 John Lettengarver, St. Paul.

Women's Singles

- Janette Ahrens, Minneapolis.
 Gretchen Merrill, Boston.
 Eileen Seigh, Brooklyn

Pairs

- Peter and Carol Kennedy, Seattle, Wash.
 Robert Swenning and Yvonne Sherman, New York

Speed Skating

- Ken Bartholomew, Minneapolis.
 Ray Blum, Nutley, N. J.
 Bob Fitzgerald, Minneapolis.
 Ken Henry, Chicago.
 Del Lamb, Milwaukee.
 Louis Ruprecht, St. Louis
 Art Seaman, Minneapolis.
 Buddy Solem, Chicago.
 John Werket, Minneapolis.

NATIONAL COLLEGIATE A. A. CHAMPIONS, 1947**Track and Field**

100 yd.—Mel Patton, Southern California.
 220 yd.—Herb McKenley, Illinois.
 440 yd.—Herb McKenley.
 880 yd.—Jack Clifford, Ohio State.
 Mile—Gerald Karver, Penn State.
 2 miles—Jerry Thompson, Texas.
 120-yd. high hurdles—Harrison Dillard, Baldwin-Wallace.
 220-yd. low hurdles—Harrison Dillard.
 Broad jump—Willie Steele, San Diego State.
 High jump—Irving Mondschein, New York University.
 Shot-put—Charles Fonville, Michigan.
 Discus—Fortune Gordien, Minnesota.
 Javelin—Bob Likens, San Jose State.
 Pole vault—Tie for first among Moore, Northwestern; Richards, Illinois; Morcom, New Hampshire; Rasmussen, Oregon; Hart, Southern California; Maggard, U. C. L. A. Team—Illinois.

Wrestling

121 lb.—Richard Hauser, Cornell (Iowa) College.
 128 lb.—Russell Bush, Iowa State Teachers.
 136 lb.—Lowell Lange, Cornell (Iowa) College.
 145 lb.—William Koll, Iowa State Teachers.
 155 lb.—Gales Mikles, Michigan State.
 165 lb.—William Nelson, Iowa State Teachers.
 175 lb.—Joe Scarpello, Iowa.
 Heavyweight—Richard Hutton, Oklahoma A. and M. Team—Cornell (Iowa) College.

Fencing

Epee—Abraham Balk, New York University.
 Foil—Abraham Balk.
 Saber—Oscar Parsons, Temple.
 Team—New York University.

Swimming

50-yd. free style—Richard Weinberg, Michigan.
 100-yd. free style—Richard Weinberg.
 220-yd. free style—Bill Smith, Ohio State.
 440-yd. free style—Bill Smith.
 1,500-m. free style—George A. Hoogerhyde, Michigan State.
 150-yd. backstroke—Harry Holiday, Michigan.
 200-yd. breast stroke—Joe Verdeur, LaSalle (Philadelphia).
 300-yd. medley relay—Michigan.
 400-yd. free style relay—Ohio State.
 1-m. dive—Miller Anderson, Ohio State.
 3-m. dive—Miller Anderson.
 Team—Ohio State.

Boxing

125 lb.—Gerald Auclair, Syracuse.
 130 lb.—Glen Hawthorne, Penn State.
 135 lb.—Charles Davey, Michigan State
 145 lb.—Cliff Lutz, Wisconsin.
 155 lb.—Herb Carlson, Idaho.
 165 lb.—John Lendenski, Wisconsin.
 175 lb.—Laune Erickson, Idaho.
 Heavyweight—Art Saey, Miami (Fla.).

Basketball

Holy Cross defeated Oklahoma, 58 to 47, in final.

Baseball

California defeated Yale, 2 games to 0, in final.

Tennis

Singles—Gardner Larned, William and Mary.
 Doubles—Sam Match-Bob Curtis, Rice Institute.
 Team—William and Mary.

Golf

Individual—Dave Barclay, Michigan.
 Team—Louisiana State.

INTERCOLLEGIATE A. A. A. TRACK AND FIELD CHAMPIONS, 1947**Outdoor**

100 yd.—Joseph Cianiabella, Manhattan.
 220 yd.—Joseph Cianiabella.
 440 yd.—George Guida, Villanova.
 880 yd.—Reginald Pearman, New York U.
 Mile—Gerald Karver, Penn State.
 2 miles—Curtis C. Stone, Penn State.
 Mile relay—Army.
 120-yd. high hurdles—Sherwood Finley, Yale.
 220-yd. low hurdles—Fred Johnson, Michigan State.
 Broad jump—Fred Johnson.
 High jump—George Heddy, Colgate.
 Shot-put—Bernard Mayer, New York U.
 Discus—Victor Frank, Yale.
 Javelin—Donald Trimble, Harvard.
 Hammer—Robert H. Bennett, Brown.
 Pole vault—Peter Harwood, Harvard.
 Team—New York University.

Indoor

60 yd.—Joseph Cianiabella, Manhattan.
 60 yd. high hurdles—Warren Halliburton, New York U.
 600 yd.—George Guida, Villanova.
 1000 yd.—William Atkinson, Manhattan.
 Mile—Gerald Karver, Penn State.
 2 miles—Curtis C. Stone, Penn State.
 Mile relay—Seton Hall.
 2 mile relay—New York University.
 Broad jump—Herbert Douglas, Pittsburgh.
 High jump—Irving Mondschein, New York U.
 Pole vault—A. Richmond Morcom, New Hampshire.
 Shot-put—Bernard Mayer, New York U.
 35-lb. weight—Robert H. Bennett, Brown.
 Team—New York University.

LACROSSE CHAMPIONS, 1947

National Open—Mount Washington Club, Baltimore.
 National Intercollegiate—Johns Hopkins.
 North-South—North.

1947 All-America Team

Goal—George Baron, City College of New York.
 Defense—John McNery, Army.
 Defense—Fred Allner, Princeton.
 Defense—Lloyd Banting, Johns Hopkins.
 Midfield—Jim Hartinger, Army.
 Midfield—Henry Fish, Princeton.
 Midfield—Wilson Fewster, Johns Hopkins.
 Attack—Leonard Gaines, Princeton.
 Attack—Damon Jordan, Rensselaer Poly.
 Attack—Brooke Tunstail, Johns Hopkins.

NATIONAL A. A. U. WRESTLING CHAMPIONS, 1947

115 lb.—Grady Peninger, Oklahoma A. & M.
 121 lb.—Charles Ridenour, New York A. C.
 126 lb.—Louis Kachiroubas, Univ. of Illinois.
 135 lb.—Lowell Lange, Cornell (Iowa) College.
 145 lb.—James Miller, Ithaca (N. Y.) Y. M. C. A.
 155 lb.—Orville Long, Southwestern (Okla.) Tech.
 165 lb.—Douglas Lee, Baltimore Y. M. C. A.
 175 lb.—Dale Thomas, Cornell (Iowa) College.
 191 lb.—Henry Wittenberg, New York Police Dept.
 Heavyweight—Ray Gunkel, Purdue.
 Team—Cornell (Iowa) College.

BOXING

WHETHER it be called pugilism, prize fighting or boxing, there is no tracing "the Sweet Science" to any definite source. Tales of rivals exchanging blows for fun, fame or money go back to earliest recorded history and classical legend. There was a mixture of boxing and wrestling called the "pancratium" in the ancient Olympic Games and in such contests the rivals belabored one another with hands fortified with heavy leather wrappings that were sometimes studded with metal. More than one Olympic competitor lost his life at this brutal exercise.

There was little law or order in pugilism until Jack Broughton, one of the early champions of England, drew up a set of rules for the game in 1743. Broughton, called "the father of English boxing", also is credited with having invented boxing gloves. However, these gloves—or "mufflers" as they were called—were used only in teaching "the manly art of self-defense" or in training bouts. All professional

championship fights were contested with "bare knuckles" until 1892 when John L. Sullivan lost the heavyweight championship of the world to James J. Corbett in New Orleans in a bout in which both contestants wore regulation gloves.

The Broughton rules were superseded by the London Prize Ring Rules of 1838. The 8th Marquess of Queensberry, with the help of John G. Chambers, put forward the "Queensberry Rules" in 1866, a code that called for gloved contests. Amateurs took quickly to the Queensberry Rules, the professionals slowly.

There is no official international set of rules for boxing even today. Amateur organizations set rules for amateurs in different countries and professional rules set by boxing commissions vary even in different sections of the United States, but the variations are for the most part minor. A prize fighter doesn't have to change his style greatly to ply his trade anywhere in the world.

June 22, 1937	Chicago.....	Joe Louis, 197¼ (23)....	Jim Braddock, 197 (31)...	KO 8	Tommy Thomas

*Lack of opposition caused Jeffries to retire in March 1905. He named Marvin Hart and Jack Root as the leading contenders and agreed to referee their fight at Reno, Nev., on July 3, 1905, with the stipulation that he would designate the winner the world champion. Hart, 190 (28), knocked out Root, 171 (29), in the twelfth round.

†Burns claimed the title after defeating Hart. Philadelphia Jack O'Brien became another claimant after fighting a 20-round draw with Burns at Los Angeles on Nov. 28, 1906, with Jeffries as the referee. Burns, 180 (25), eliminated O'Brien, 167 (29), by defeating him in 20 rounds at Los Angeles, May 8, 1907. Charles Eytan was the referee.

‡Tunney retired after his bout with Tom Heeney in New York on July 26, 1928. Tunney, 192 (30), knocked out Heeney, 203½ (30), in the eleventh round. Ed Forbes was the referee.

BARE-KNUCKLE HEAVYWEIGHT CHAMPIONS, 1719-1892

- | | |
|---|--|
| <p>1719—Jim Figg</p> <p>1734—George Taylor</p> <p>1740—Jack Broughton</p> <p>1750—Jack Slack</p> <p>1760—Bill Stevens</p> <p>1761—George Meggs</p> <p>1765—Bill Darts</p> <p>1777—Harry Sellers</p> <p>1780—Jack Harris</p> <p>1785—Tom (Jackling) Johnson</p> <p>1790—Big Ben Brain</p> <p>1792—Daniel Mendoza</p> <p>1795—John Jackson (retired)</p> <p>1802—Jem Belcher</p> <p>1805—Henry Pearce (Game Chicken)</p> <p>1808—John Gully (declined title)</p> <p>1809—Tom Cribb received belt, not transferable, and cup</p> <p>1824—Tom Spring received four cups; resigned title.</p> <p>1825—Jem Ward received belt, not transferable</p> <p>1838—James (Deaf) Burke claimed title</p> <p>1839—William Thompson (Bendigo) beat Burke; claimed championship; received belt from Jem Ward.</p> <p>1841—Nick Ward (Jem's brother) beat Ben Caunt, Feb. 2. In return match Caunt beat Nick Ward and received belt by subscription. It was transferable.</p> <p>1845—Thompson beat Caunt and got belt.</p> <p>1850—Bill Perry (The Tipton Slasher), after fight with Paddock, claimed title.</p> <p>1851—Harry Broome won title from Perry.</p> <p>1853—Perry claimed title when Broome forfeited £200 to him in a match; retired from ring on Aug. 13.</p> <p>1857—Tom Sayers beat Perry for £200 a side and new belt.</p> <p>1860—Sayers retired after 42-round draw with John C. Heenan (The Benicia Boy), leaving old belt open for competition.</p> | <p>1860—Sam Hurst (The Stalybridge Infant) beat Paddock and received belt.</p> <p>1861—Jem Mace beat Hurst.</p> <p>1862—Mace beat Tom King for £200 a side and the belt.</p> <p>1862—King beat Mace and claimed belt. Subsequently gave it up. Declined to meet Mace again. Mace claimed belt.</p> <p>1863—King beat Heenan for £1,000 a side.</p> <p>1865—Joe Wormald beat Andrew Marsden for £200 a side and belt, which had been claimed by both. Belt was given to Wormald, who forfeited £120 to Mace.</p> <p>1866—Mace and Joe Goss fought draw with £200 a side and belt at stake.</p> <p>1867—Wormald received £200 forfeit from Ned O'Baldwin and claimed belt when O'Baldwin failed to appear at starting place.</p> <p>1867—Mace and O'Baldwin drew; £200 a side; title and belt in abeyance.</p> <p>1868—Wormald and O'Baldwin drew; £200 a side and title in America.</p> <p>1869—Mike McCoolle beat Tom Allen in America for world championship.</p> <p>1870—Mace beat Allen in America for world championship.</p> <p>1871—Mace and Joe Coburn fought draw for championship; £500 a side.</p> <p>1882—John L. Sullivan defeated Paddy Ryan for American championship only; 9 rounds, Mississippi City, Miss. (London Prize Ring rules).</p> <p>1885—Jem Smith beat Jack Davis for £100 a side and championship of England.</p> <p>1887—Jake Kilrain and Jem Smith drew; \$10,000 and Police Gazette Championship of World belt.</p> <p>1889—John L. Sullivan beat Jake Kilrain, 75 rounds, Richburg, Miss., July 8, in last bare-knuckle championship fight; \$10,000 a side and Police Gazette Belt. (Sullivan claimed world title because of draw fought by Kilrain with Smith, England's titleholder.)</p> |
|---|--|

Other Boxing Titleholders

LIGHT HEAVYWEIGHT CHAMPIONS

- 1903 —Jack Root, George Gardner
 1903-05—Bob Fitzsimmons
 1905-12—Philadelphia Jack O'Brien
 1912-16—Jack Dillon
 1916-20—Battling Levinsky
 1920-22—Georges Carpentier
 1923 —Battling Siki
 1923-25—Mike McGigue
 1925-26—Paul Berlenbach
 1926-27—Jack Delaney (a)
 1927 —Mike McGigue
 1927-29—Tommy Loughran (a)
 1930-34—Maxie Rosenbloom
 1934-35—Bob Olin
 1935-39—John Henry Lewis (a)
 1939 —Melio Bettina
 1939-41—Billy Conn (a)
 1941- —Gus Lesnevich
 (a) Abandoned title.

MIDDLEWEIGHT CHAMPIONS

- 1867-72—Tom Chandler (bare knuckles).
 1872-81—Geo. Rourke (bare knuckles and gloves)
 1881-82—Mike Donovan (r)
 1884-91—Jack (Nonpareil) Dempsey
 1891-97—Bob Fitzsimmons
 1897-1907—Tommy Ryan, Kid McCoy, Philadelphia Jack O'Brien (t)
 1907-08—Stanley Ketchel
 1908 —Billy Papke
 1908-10—Stanley Ketchel
 1910-13—Billy Papke
 1913 —Frank Klaus
 1913-14—George Chip
 1914-17—Al McCoy
 1917-20—Mike O'Dowd
 1920-23—Johnny Wilson
 1923-26—Harry Greb
 1926 —Tiger Flowers
 1926-31—Mickey Walker (a)
 1931-32—Gorilla Jones (NBA); Ben Jeby (N. Y. Comm.)
 1932-37—Marcel Thil*
 1938 —Al Hostak and Solly Krieger (NBA)
 1939 —Solly Krieger, Al Hostak (NBA); Ceferino Garcia (N. Y. Comm.)
 1940 —Tony Zale (NBA); Ken Overlin (N. Y. Comm.)
 1941 —Tony Zale (NBA); Billy Soose (N. Y. Comm.)†
 1941-47—Tony Zale
 1947- —Rocky Graziano

(r) Retired. (t) Title claimants. (a) Abandoned title. *Thil's victory on a foul over Jones gave him a clear title claim, but the New York Commission withheld recognition. At various times during the 1932-37 period, championship recognition by the different bodies was given to the following: Ben Jeby, Lou Brouillard, Vince Dundee, Teddy Yarosz, Babe Risko, and Freddy Steele. Fred Apostoli knocked out Thil in 10 rounds at the Polo Grounds, Sept. 23, 1937, but did not claim the title because of an agreement made with Thil. This was Thil's last fight. †Soose abandoned his claim to the title and Zale became the undisputed champion by defeating Georgie Abrams, who had beaten Soose three times.

WELTERWEIGHT CHAMPIONS

- 1892-94—Mysterious Billy Smith
 1894-96—Tommy Ryan
 1896 —Kid McCoy (o)
 1900 —Rube Ferns, Matty Matthews
 1901 —Rube Ferns
 1901-06—Joe Walcott*
 1906-07—Honey Melody

- 1907 —Mike (Twin) Sullivant
 1915 —Ted Lewis†
 1919-22—Jack Britton
 1922-26—Mickey Walker
 1926-27—Pete Latzo
 1927-29—Joe Dundee
 1929-30—Jackie Fields
 1930 —Young Jack Thompson
 1930-31—Tommy Freeman
 1931 —Young Jack Thompson
 1931-32—Lou Brouillard
 1932-33—Jackie Fields
 1933 —Young Corbett 3d
 1933-34—Jimmy McLarnin
 1934 —Barney Ross
 1934-35—Jimmy McLarnin
 1935-38—Barney Ross
 1938-40—Henry Armstrong
 1940-41—Fritzie Zivic
 1941-46—Freddie Cochrane
 1946-47—Marty Servo (r), Ray Robinson
 1947- —Ray Robinson

(o) Outgrew class. *Walcott lost on foul to Dixie Kid in 1904, but decision was disputed. Dixie Kid went abroad, outgrew class, and Walcott was again recognized as the champion. †Sullivant outgrew class. The title was claimed by Jimmy Gardner, Jimmy Clabby, Ray Bronson, Clarence (Kid) Ferns, Mike Gibbons, Kid Graves, Mike Glover, Ted Lewis, and Jack Britton but no one received recognition as titleholder until Ted Lewis established his claim in 1915. †Lewis outpointed Britton to gain undisputed possession of the crown on Aug. 31, 1915, and fought Britton a number of times over a period of four years with varying results until March 17, 1919, when Britton became the undisputed titleholder by knocking out Lewis. (r) Retired.

LIGHTWEIGHT CHAMPIONS

- 1885-96—Jack McAuliffe*
 1896-99—Kid Lavigne
 1899-02—Frank Erne
 1902-08—Joe Gans
 1908-10—Battling Nelson
 1910-12—Ad Wolgast
 1912-14—Willie Ritchie
 1914-17—Freddy Welsh
 1917-25—Benny Leonard (r)
 1925 —Jimmy Goodrich
 1925-26—Rocky Kansas
 1926-30—Sammy Mandell
 1930 —Al Singer
 1930-33—Tony Canzoneri
 1933-35—Barney Ross
 1935-36—Tony Canzoneri
 1936-38—Lou Ambers
 1938-39—Henry Armstrong
 1939-40—Lou Ambers
 1940-41—Lew Jenkins
 1941-42—Sammy Angott†
 1943 —Beau Jack, Bob Montgomery (N. Y. Comm.), Sammy Angott (NBA).
 1944 —Beau Jack, Bob Montgomery (N. Y. Comm.), Sammy Angott, Juan Zurita (NBA).
 1945 —Bob Montgomery (N. Y. Comm.), Juan Zurita, Ike Williams (NBA).
 1946-47—Bob Montgomery (N. Y. Comm.), Ike Williams (NBA).
 1947- —Ike Williams

*McAuliffe was champion of America, but never held the world crown, his battle for the world title with Jem Carney of England in 1887 resulting in a 74-round draw. (r) Retired. †Angott announced his retirement on Nov. 13, 1942, leaving title vacant, but approximately two months later announced his comeback as challenger for the crown.

FEATHERWEIGHT CHAMPIONS

- 189 —Freddy Bogan
 190 —Billy Murphy
 192-1900—George Dixon
 1900-01—Terry McGovern
 1901 —Young Corbett (o)
 1904-08—Brooklyn Tommy Sullivan
 1908-12—Abe Attell
 1912-23—Johnny Kilbane
 1923 —Eugene Criqui
 1923-25—Johnny Dundee (o)
 1925-27—Louis (Kid) Kaplan (o)
 1927-28—Benny Bass
 1928 —Tony Canzoneri
 1928-29—Andre Routis
 1929-32—Battling Battalino (o)
 1932 —Tommy Paul (NBA); Kid Chocolate (N. Y. Comm.).
 1933-36—Freddie Miller
 1936-37—Petey Sarron
 1937-38—Henry Armstrong (a)
 1938-40—Joey Archibald
 1940-41—Harry Jeffra, Joey Archibald
 1941-42—Chalky Wright
 1942—Willie Pep
 (o)Outgrew class. (a)Abandoned title.

FLYWEIGHT CHAMPIONS

- 1916-23—Jimmy Wilde
 1923-25—Pancho Villa*
 1925 —Frankie Genaro
 1925-27—Fidel La Barba (r)
 1927 —Corporal Izzy Schwartz†
 1930 —Midget Wolgast (N. Y. Comm.); Frankie Genaro (NBA).
 1931-32—Young Perez†
 1932-35—Jackie Brown
 1935-38—Benny Lynch (r)
 1939 —Peter Kane (a)
 1943-47—Jackie Paterson (d)
 1947 —Rinty Monaghan

*Villa died in 1925, Genaro claiming title. †Schwartz as recognized as champion by N. Y. Comm., but conditions in the class became confused and were not lightened out until an elimination tourney was held in November, 1929. ‡Perez was recognized as world's champion by the International Boxing Union of Europe. (r)Retired. (a)Abandoned title. (d)Deprived of title.

1936.....	281,838.00	1939.....	301,995.17	1942.....	111,082.00	Total.....	\$3,393,073.72*

*Louis was inducted into the Army in 1942. Before his fight with Billy Conn on June 19, 1946, Louis' earnings from exhibitions while on furlough and since his discharge amounted to \$73,000. In 1946-47 Joe received approximately \$200,000 from exhibitions in the United States, Hawaii, Mexico, Cuba and South America.

Title Bout Sets Indoor Record

A crowd of 18,457 paid record receipts of \$422,918 for an indoor boxing show to see Rocky Graziano knock out Tony Zale in the sixth round of their world middle-weight title bout in the Chicago Stadium on July 16, 1947. An additional \$30,000 was received for the broadcast rights.

(World title fights in 1947 listed on page 910.)

Lesnevich Stops Fox's Streak

When Billy Fox stepped into Madison Square Garden's ring on Feb. 28, 1947, for a title bout with Gus Lesnevich, world light heavyweight champion, he carried with him a record of forty-three knockouts in forty-three professional bouts. Lesnevich knocked him out in the tenth.

Evans Snowshoe Victor

Lloyd Evans, a marathon runner from Hyacinthe, Quebec, won the ten-mile race at the International Snowshow Congress on Feb. 1, 1947. The winner finished in a three-minute margin over Walter Lang, the runner-up, covering the route

from Bow to Manchester, N.H., in 68 minutes 15 seconds. Gerard Cote, three-time Boston Marathon victor, finished third. Evans set the world record of 59 minutes 23 seconds for the distance at Quebec in 1945.

LAWN TENNIS

LAWN TENNIS is a comparatively modern modification of the ancient game of court tennis. Major Walter Clopton Wingfield thought that something like court tennis might be played outdoors on lawns and in December, 1873, at Nantclwyd, Wales, he introduced his new game under the name of *Sphairistike* at a lawn party. The game was a success and spread rapidly, but the name was a total failure and almost immediately disappeared when all the players and spectators began to refer to the new game as "lawn tennis". In the early part of 1874 a young lady named Mary Ewing Outerbridge returned from Bermuda to New York, bringing with her the implements and necessary equipment of the new game that she had obtained from a British Army supply store in Bermuda. Miss Outerbridge and friends played the first game of lawn tennis in the United States on the grounds of the Staten Island

Cricket and Baseball Club in the spring of 1874.

For a few years the new game went along in haphazard fashion under varying rules. Tennis balls were of no standard size or texture. The nets were set at different heights up to 5 feet on the side and 4 feet in the middle. Some courts were marked out in hour-glass shape, narrow in the middle and wide at both ends. But about 1880 standard measurements for the court and standard equipment within definite limits became the rule. In 1881 the United States Lawn Tennis Association was formed and conducted the first national championship at Newport, R. I. The international matches for the Davis Cup began with a series between the British and United States players on the courts of the Longwood Cricket Club, Chestnut Hill, Mass., in 1900, with the home players winning.

GOLF

IT MAY BE that golf originated in Holland—historians believe it did—but certainly Scotland fostered the game and is famous for it. In fact, in 1457 the Scottish Parliament, disturbed because football and golf had lured young Scots from the more soldierly exercise of archery, passed an ordinance that "futeball and golf be utterly cryit down and nocht usit". James I and Charles I of the royal line of Stuarts were golf enthusiasts, whereby the game came to be known as "the royal and ancient game of golf".

The golf balls used in the early games were leather covered and stuffed with feathers. Clubs of all kinds were fashioned by hand to suit individual players. The great step in spreading the game came with the change from the feather ball to the gutta-percha ball about 1850, and in 1860 formal competition began with the establishment of an annual tournament for the British open championship. There are records of "golf clubs" in the United

States as far back as colonial days but no proof of actual play before John Reid and some friends laid out six holes on the Reid lawn in Yonkers, N. Y., in 1888 and played there with the golf balls and clubs brought over from Scotland by Robert Lockhart. This group then formed the St. Andrews Golf Club of Yonkers, and golf was established in this country.

However, it remained a rather sedate and almost aristocratic pastime until a 20-year-old ex-caddy, Francis Ouimet of Boston, defeated two great British professionals, Harry Vardon and Ted Ray, in the United States Open championship at Brookline, Mass., in 1913. This feat put the game and Francis Ouimet on the front pages of the newspapers and stirred a wave of enthusiasm for the sport. The greatest feat so far in golf history was that of Robert Tyre Jones, Jr. of Atlanta, Ga., in winning the British Open, the British Amateur, the U. S. Open and the U. S. Amateur titles in one year, 1930.

(a) Won play-off. *In 1892 competition was extended to 72 holes.

Ace Percentage Increases

Michael Buchka, assistant pro at the Webster-Dudley (Mass.) Golf Club, one day last July spent twelve hours making 3,333 shots at the course's 135-yard third hole

in a vain attempt to score a hole-in-one. One ball lipped the cup, five came within an inch of the cup and the pin was hit six times.

Braid Scores 15th Hole-in-One

James Braid, England's grand old man of golf, registered his fifteenth hole-in-one last April. His ace came at the 165-yard 15th hole on the Walton Heath course, where he had been the professional for thirty-three years. According to the British Golf Book, the late Sandy Herd holds the record for aces with nineteen.

Golf Record to McHale

Jim McHale of Philadelphia turned in the best 18-hole round in the history of the National open golf championship tourney when he registered a 30, 35—65 in last year's event, held at the St. Louis-Country Club. His 30 for the first nine shattered the previous mark of 31, held jointly by Bobby Jones and Henry Ransom, and his 65 wiped out the former record of 66, held by a number of players.

McHale's record round:

Out—

Par 4 3 3 4 5 4 3 4 5—35
 McHale 3 3 2 4 4 3 2 4 5—30

In—

Par 4 4 3 5 4 5 3 4 4—71
 McHale 4 4 3 5 4 4 3 4 4—35—65

ICE HOCKEY

ICE HOCKEY, by birth and upbringing a Canadian game, is an offshoot of field hockey. Some historians state that the first ice hockey game was played in Montreal in December, 1879, between two teams composed almost exclusively of McGill University students, but others assert that Kingston, Ont., or Halifax, N. S., were scenes of earlier hockey games. In the Montreal game of 1879 there were fifteen players on a side and they used an assortment of crude sticks to keep the puck in motion. Early rules allowed nine men on a side but the number was reduced to seven in 1886 and finally reduced to six, the standard of today.

The first governing body of the sport was the Amateur Hockey Association of Canada, organized in 1887. In the winter of 1894-95 a group of college students from the United States visited Canada, saw hockey played, became enthused over the game and introduced it as a winter sport when they returned home. This was the

start of hockey in the United States. The first professional league was the International Hockey League that operated, strangely enough, not in Canada but in northern Michigan in 1904-06 and included as players such famous stars as Cyclone Taylor and Hod Stuart, later included in the Hockey Hall of Fame.

Until 1910, professionals and amateurs were allowed to play together on "mixed teams", but this arrangement ended with the formation of the first "big league", the National Hockey Association, in eastern Canada in 1910. The Pacific Coast League, to provide professional hockey in the West, was organized in 1911 with Seattle (and later other American cities) included in the circuit. The National Hockey League replaced the National Hockey Association in 1917. Boston, in 1924, was the first American city to join that circuit. The Stanley Cup, top trophy of hockey, was competed for by "mixed teams" from 1894 to 1910, thereafter by professionals.

BASKETBALL

BASKETBALL may be unique in sports. It is one game concerning which it is safe to state when, where and how it originated. In the winter of 1891-92, Dr. James Naismith, an instructor in the Y.M.C.A. Training College (now Springfield College) at Springfield, Mass., deliberately invented the game of basketball in order to provide indoor exercise and competition for the students between the closing of the football season and the opening of the baseball season. He affixed peach baskets overhead on the walls at opposite ends of the gymnasium and, with an association (soccer) football, organized teams to play his new game in which the purpose was to toss the ball into one basket and prevent, as far as possible, the opponents from tossing the ball into the other basket. Fun-

damentally, the game is the same today, though there have been some improvements in equipment and many changes in the rules.

Because Dr. Naismith had eighteen available players when he invented the game, the first rule was: "There shall be nine players on each side." Later the number of players became optional, depending upon the size of the available court, but the five-player standard was adopted when the game spread over the country. United States soldiers introduced the game in Europe in World War I and, being taken up by foreign nations, it soon became a world-wide sport. An odd point is that, though it is still chiefly an indoor game in the United States, in other countries it flourishes almost entirely outdoors.

947	Ch. Warlord of Mazelaine	Boxer	Mr. and Mrs. R. C. Kettles, Jr.

POLO

POLO originated "somewhere east of Suez" but exactly where never has been determined. There is pictorial proof that it was played many centuries ago in Persia, Japan, China and Tibet, but it reached England by way of a border tribe in India known as the Manipuri. British army officers in India, about 1860, found the Manipuri playing polo and learned the game from them. The fact that the Manipuri used small native horses—they had no others—was the reason for the early height limit (14 hands) on polo mounts, from which arose the custom of calling them "polo ponies," which was abandoned in 1919.

In 1869 some officers of the 10th Hussars, returning from India, introduced the game in England and informal games were played with as many as eight players on a side. Formal competition at Hurlingham, the great shrine of the game, began in 1876 with five players on a side, which

number was cut to four in 1882. In 1884 an outstanding English player by the name of John Watson invented the backhand stroke and much improved the tactics of the game.

James Gordon Bennett, Jr., noted American newspaper owner and editor, saw polo at Hurlingham in 1875, brought the implements to this country, had a carload of cow ponies sent up from Texas and promoted a game that was played indoors at the Dickel Riding Academy at Fifth Avenue and 39th Street, New York City, in 1876. Polo moved outdoors to the Jerome Park race course and other suitable places soon after. One field on which it was played, at Fifth Avenue and 110th Street, was taken over by the New York baseball team in the National League and that is why the field on which the "Giants" play ball, although there since have been two changes in site, still is called "the Polo Grounds."

Hurricanes Take Monty Waterbury Cup Final

Alan Corey sparked the Hurricanes to a 9-3 victory over the Westchester quartet in the 1947 final of the twenty-second Monty Waterbury Memorial Cup handicap tournament at the Meadow Brook Club, Westbury, L. I. The West beat the East, 9 to 7, in last season's renewal of the intersectional series on famed International Field of the Meadow Brook Club.

NATIONAL OPEN POLO CHAMPIONS

Not held from 1905 to 1909, inclusive; 1911, 1915, 1917, 1918, and from 1942 to 1945, inclusive.

1904—WANDERERS 1—C. R. Snowden. 2—J. E. Cowdin. 3—J. M. Waterbury, Jr. Back—L. Waterbury.	1921—GREAT NECK 1—L. E. Stoddard. 2—R. Wanamaker, II. 3—J. W. Webb. Back—R. E. World Champions

1851-58	Adolph Anderssen, Breslau, Germany
1858-62	Paul Morphy, New Orleans, La.
1862-66	Adolf Anderssen, Breslau, Germany
1866-94	William Steinitz, Vienna, Austria
1894-1921	Emanuel Lasker, Berlin, Germany
1921-27	Jose R. Capablanca, Havana, Cuba
1927-35	Alexander A. Alekhine, Moscow, Russia
1935-37	Dr. Max Euwe, Amsterdam, The Netherlands
1937-46	Alexander A. Alekhine, Moscow, Russia*

*Alekhine, a French citizen, died on March 23, 1946, leaving the world championship vacant.

Kashdan Annexes Open Crown

Isaac I. Kashdan of New York, with a score of 11½-1½, won the 1947 open championship tournament of the U. S. Chess Federation at Corpus Christi, Texas, last August. Runner-up honors were shared by Anthony Santasiere and Abe Yanofsky.

United States Champions

1858-62	Paul Morphy, New Orleans, La.
1871-87	George H. Mackenzie, New York
1887-92	Max Judd, St. Louis, Mo.
1892-94	Simon Lipschuetz, New York
1894	Jackson W. Showalter, Georgetown, Ky.
1894	Albert B. Hodges, Staten Island, N. Y.*
1894-97	Jackson W. Showalter, Georgetown, Ky.
1897-1906	Harry Nelson Pillsbury, Boston, Mass.
1906-09	Jackson W. Showalter, Georgetown, Ky.
1909-36	Frank J. Marshall, New York
1936-44	Samuel Reshevsky, New York†
1944-46	Arnold S. Denker, New York
1946	Samuel Reshevsky, Boston

*Retired after winning return match with Showalter. †In 1942, Isaac I. Kashdan of New York was co-champion for a while because of a tie with Reshevsky in that year's tournament. Reshevsky won the play-off.

SKIING

SKIS were devised for utility, to aid those who had to travel over snow. The Norwegians, Swedes, Lapps and other inhabitants of northern lands used skis for many centuries before skiing became a sport. Emigrants from these countries brought skis to the United States with them. The first skier of record in the United States was a mailman by the name of "Snowshoe" Thomson, born and raised in Telemarken, Norway, who came to the United States and, beginning in 1850, used

skis through twenty successive winters in carrying mail from northern California to Carson Valley, Nevada.

Ski clubs sprang up about sixty years ago where there were Norwegian and Swedish settlers in Wisconsin and Minnesota and ski contests were held in that territory in 1886. On Feb. 21, 1904, at Ishpeming, Mich., a small group of skiers organized the National Ski Association that, with the rapid growth of the sport, now has approximately 300 member clubs.

Long Jumps (Official American)

Year	Made by and place	Distance, in feet
1904	T. Walters, Ishpeming, Mich.	82
1905	Gustave Bye, Red Wing, Minn.	106
1908	John Evenson, Ishpeming, Mich.	122
1910	August Nordby, Ishpeming, Mich.	140
1913	Lars Haugen, Steamboat Springs, Col.	185
1917	Henry Hall, Steamboat Springs, Col.	203
1919	Lars Haugen, Steamboat Springs, Col.	214
1932	Hans Brack, Lake Placid, N. Y.	235

Joseph Bradl of Austria holds the world long-jump record with a leap of 350.96 feet, made at Planica, Yugoslavia, in 1938.

NATIONAL CHAMPIONS, 1947

Jumping

Class A, amateur and open—Arnold Kongsgaard, Norway.
Class B—Kenneth Oja, Ishpeming, Mich.
Class C (under 18)—Wilbert Rasmussen, Ishpeming, Mich.
Veterans' (over 32)—Earl Minkin, Ironwood, Mich.

Cross-Country, and Classic Combined

Class A cross-country—Wendall Broomhall, Rumford, Maine.
Combined jumping and cross-country—Ralph Townsend, Durham, N. H.

Downhill and Slalom

MEN

Downhill, amateur and open—Karl Molitor, Switzerland.
Slalom, amateur and open—Karl Molitor.
Combined, amateur and open—Karl Molitor.

WOMEN

Downhill, amateur and open—Rhoda Wurtele, Canada.
Slalom, amateur and open—Olivia Ausoni, Switzerland.
Combined, amateur and open—Rhoda Wurtele.

Awards

Paul Bietila Trophy (best American-born ski jumper)—Joseph Perrault, Ishpeming, Mich.
Julius P. Blegen Trophy (outstanding service to U. S. skiing)—Roger Langley, Barre, Mass.
National Ski Patrol Trophy (outstanding national ski patrolman of the year)—Harold M. Gore, Amherst, Mass.
American Ski Trophy (outstanding contribution to the sport)—R. L. (Barney) McLean, Denver, Colo.

The American jumping record of 289 feet was unofficially broken by Arnold Kongsgaard, who leaped 294 feet while giving an exhibition at Olympian Hill, Hyak, Wash., on March 23, 1947.

Year	Made by and place	Distance, in feet
1934	John Elvrum, Big Pines, Calif.	240
1937	Alf Engen, Salt Lake City, Utah	242
1939	Alf Engen, Big Pines, Calif.	251
1939	Bob Roecker, Iron Mountain, Mich.	257
1941	Alf Engen, Iron Mountain, Mich.	267
1941	Torger Tokle, Leavenworth, Wash.	273
1941	Torger Tokle, Olympian Hill, Hyak, Wash.	288
1942	Torger Tokle, Iron Mountain, Mich.	289

record with a leap of 350.96 feet, made at Planica, Yugoslavia, in 1938.

U. S. 1948 OLYMPIC TEAM

Men's Downhill and Slalom

John M. Blatt, Palo Alto, Calif.
Robert Blatt, Jr., Palo Alto, Calif.
William G. Distin, Saranac Lake, N. Y.
David S. Fairas, Seattle, Wash.
Gene Gillis, Bend, Oreg.
H. Devereaux Jennings, Salt Lake City, Utah.
Steve Knowlton, Aspen, Colo.
George Macomber, West Newton, Mass.
Robert L. McLean, Denver, Colo.
Richard D. Movitz, Salt Lake City, Utah.
Jack N. Reddish, Salt Lake City, Utah.
Colin C. Stewart, Hanover, N. H.

Women's Downhill and Slalom

Gretchen Fraser, Vancouver, Wash.
Rebecca A. Fraser, Bridgewater Corners, Vt.
Brynhild Grasmoe, Merced, Calif.
Suzanne Harris, Salt Lake City, Utah.
Paula Kann, North Conway, N. H.
Andrea Mead, Rutland, Vt.
Dodie Post, Reno, Nev.
Ruth-Marie Stewart, Hanover, N. H.

Men's Jumping

Ralph Bietila, Ishpeming, Mich.
Walter Bietila, Iron Mountain, Mich.
Arthur Devlin, Lake Placid, N. Y.
Sverre Fredheim, St. Paul.
Joseph Perrault, Ishpeming, Mich.
Gordon Wren, Denver, Colo.

Men's Cross-Country, and Classic Combined

Wendall Broomhall, Rumford, Maine.
Corey Engen, Huntsville, Utah.
Don Johnson, Salt Lake City, Utah.
Ralph Townsend, Durham, N. H.

ROWING

ROWING goes back so far in history that there is no possibility of tracing it to any particular aboriginal source. The oldest rowing race still on the calendar is the "Doggett's Coat and Badge" contest among professional watermen of the Thames (England) that began in 1715. The first Oxford-Cambridge race was held at Henley in 1829. Competitive rowing in the United States began with matches between boats rowed by professional oarsmen of the New York water front. They were oarsmen who rowed the small boats that plied as ferries from Manhattan Island to Brooklyn and return, or who rowed salesmen down the harbor to meet ships arriving from Europe. Since the first salesman to meet an incoming ship had some advantage over his rivals, there was keen competition in the bidding for fast boats and the best oarsmen. This gave rise to match races for a purse or a side bet on many occasions. The first of such races was held in June, 1811, in four-oared gigs.

Amateur boat clubs sprang up in the United States between 1820 and 1830 and seven students of Yale joined together to purchase a four-oared lap-streak gig in 1843. The first Harvard-Yale race was held Aug. 3, 1852, on Lake Winnepesaukee, N. H. The first time an American college crew went abroad was in 1869 when Harvard challenged Oxford and was defeated on the Thames. There were early college rowing races on Lake Quinsigamond, near Worcester, Mass., and on Saratoga Lake, N. Y., but the Intercollegiate Rowing Association, in 1895, settled on the Hudson, at Poughkeepsie, as the setting for the annual "Poughkeepsie Regatta". The National Association of Amateur Oarsmen, organized in 1872, has conducted annual championship regattas since that time. The first rowing races were held with lap-streak gigs but shells came into general favor about a century ago. The outrigger was invented in 1830 by Clasper, an Englishman. Yale used the sliding seat in 1870.

MOTORBOATING

SINCE the source of power—the internal combustion engine—is the same in the motorboat as it is in the automobile, the history of motorboat racing parallels that of auto racing. There was a sporting risk in driving the early power boats. As soon as they began to show a degree of dependability, there came the informal rivalries of the rivers and lakes. These led to the formal contests of speed and endurance

over marked courses under the control of the American Power Boat Association. The races were severe tests of all parts of power boats and what was learned in the annual Gold Cup competition, which started in 1904, caused a great improvement in the designing of engines and hulls. The development of the outboard motor opened up another branch of power boat competition of wide popularity.

GOLD CUP WINNERS

Beginning with 1922 the race for the American Power Boat Association Gold Cup was open only to displacement boats of over 25 feet in length and powered with motors of not more than 625 inches piston displacement.

Motorboat Classics to Miss Peps V

Miss Peps V, owned by the Dossin brothers and piloted by Danny Foster, made a clean sweep in 1947 of the three events that make up motorboating's

"triple crown," the Gold Cup test on Jamaica Bay, Long Island, the National Sweepstakes at Red Bank, N. J., and the President's Cup at Washington, D. C.

IRISH HURLING

Kilkenny defeated Cork, 14 to 13, for the 1947 All-Ireland hurling championship. The match took place at Croke Park, Dublin, before a crowd of 70,000.

YACHTING

JASON sailed in search of the Golden Fleece. Cleopatra (according to Shakespeare) had a royal barge with purple sails. Columbus had three sailing ships when he crossed the Atlantic westward in 1492. But who the first sailor was and where he launched his primitive craft nobody ever will know. The word "yacht" is of Dutch origin and the first "yacht race" of record in the English language was a sailing contest from Greenwich to Gravesend and return in 1662 between a Dutch yacht and an English yacht designed and, at some part of the race, sailed by Charles II of England. The royal yacht won the contest.

The first yacht club was organized at Cork, Ireland, in 1720 under the name of the Cork Harbour Water Club, later changed to the Royal Cork Yacht Club. The Royal Yacht Squadron was organized

at Cowes in 1812 and the name changed to the Royal Yacht Club in 1820. The New York Yacht Club was organized aboard the Stevens schooner "Gimcrack" on July 30, 1844, and a clubhouse erected at Elysian Fields, Hoboken, N. J., the following year.

From that time until the Civil War races were held over courses starting from the water off the yacht club promontory. One course was to the Sandy Hook Lightship and return.

In 1850 the celebrated "America" was built by a group of New York yachtsmen and sent abroad to compete at Cowes. In a race around the Isle of Wight, with a special cup as a prize, the "America" defeated fourteen English boats and brought back the trophy that has been raced for as "the America's Cup" in many international yacht races since that time.

AUTO RACING

THE FIRST automobiles on the road were Terratic in action and driving them or even riding in them was considered a trifle risky, hence it became the sporting thing to do. Experimental excursions in crude cars gave rise to rivalry in speed over the rough roads of the Gay Nineties and this eventually led to formal contests, the first of which was a road race from Paris to Rouen in 1894, with 26 cars showing up at the starting line. Formal competition in the United States started with a road race in the Chicago district on Thanksgiving Day, 1895, and the winner, J. F. Duryea, covered the road distance of 54.36 miles at the astonishing average of 7.5 miles per hour!

Around 1900 Paris became the hub of road racing in Europe and each year there were raucous, dusty and dangerous races from Paris to Berlin, to Vienna, to Madrid

and other cities on the Continent. Accidents were so numerous to drivers and spectators that, after a gory group of mishaps in the forepart of the Paris-Madrid race of 1903, the contest was halted at Bordeaux by public authorities and all road racing was brought under control. Other kinds of auto racing were exposed to view. Some contests, including 24-hour races for stock models, were held on circular or oval tracks originally built for horse racing. Finally came the special racing strips for autos, including such famous autodromes as Brooklands in England and the Indianapolis Speedway in the United States.

As a test of engine and chassis under severe conditions and great strain, auto racing rendered invaluable assistance in the development of the motor car of today.

History of the One-Mile Speed Mark

The first recorded effort for one mile was made in 1898 by Chasseloup-Laubat, driving a Jentaud, in France. His average was 39.23 m.p.h. This was increased to 65.79 in 1899 by Jenatzky, also in France. The first man to travel better than 100 m.p.h. was Rigolly, in 1904, at 103.56 m.p.h., followed by Baras, with 104.53 in the same year. The first over 200 m.p.h. was Major H. O. D. Segrave, who drove at 203.790 in 1927 at Daytona, Florida.

Another chapter was added in 1947 when John Cobb of London became the first person to travel more than 400 m.p.h. on land. The Englishman accomplished the

feat on Sept. 16 at Bonneville, Utah, while raising the world mile record to 394.196 m.p.h. and the world kilometer (.62137 of a mile) mark to 393.825 m.p.h.

Cobb's fastest mile was covered in 8.93 seconds and his average speed was 9.1325 seconds. The Briton drove at the rate of 385.645 m.p.h. for the mile and 388.019 for the kilometer on the southward run, then increased his pace to 403.135 m.p.h. and 399.808, respectively, on the northward sprint, the best times ever recorded.

Those who drove 300 m.p.h. or better follow (all at Bonneville):

Date	Driver	Car	Average
Sept. 3, 1935	Sir Malcolm Campbell	Bluebird Special	301.1292
Sept. 3, 1935	Sir Malcolm Campbell	Bluebird Special	301.13

- 1-man—Ernie Riedel, Pendleton C. C.
- 2-man—Adolph Springel-Ernie Riedel, Pendleton C. C.
- 4-man—Pendleton C. C. (Folkes, Springel, Riedel, Lavach)

U. S. NEGRO TENNIS CHAMPIONS, 1947

Singles—George Stewart, Panama.
 Women's singles—Althea Gipson, Wilmington, N. C.
 Doubles—John Chandler, Plainfield, N. J.-Harold Mitchell, Oakland, Calif.
 Women's doubles—Margaret Peters-Roumania Peters, Tuskegee, Ala.
 Mixed doubles—Ora Washington, Philadelphia-George Stewart.

PADDLE TENNIS

National Open Champions, 1947

Singles—Lester Stevens, Bronx, N. Y.
 Doubles—Abe Tauber-Cliff Bacharach, Bronx, N. Y.

BOWLING

THE GAME of bowling that is the favorite sport of millions of "keglers" in the United States is an indoor modification of the more ancient outdoor game that survives as lawn bowling. The outdoor game is prehistoric in origin and probably goes back to Primitive Man and round stones that were rolled at some target. It is believed that a game something like nine-pins was popular among the Dutch, Swiss and Germans as long ago as A.D. 1200 at which time the game was played outdoors with an alley consisting of a single plank 12 to 18 inches wide along which was rolled a ball toward three rows of three pins each placed at the far end of the alley. When the first indoor alleys were built and how the game was modified from time to time are matters of dispute. Much of the confusion arises from a lack of certainty as to which game is meant, "bowls" or "bowling", one with a "jack" and the other with "pins", in historical passages.

It is supposed that the early settlers of New Amsterdam (New York City) being Dutch, they brought their two bowling games with them. About a century ago the game of nine-pins was flourishing in the United States but so corrupted by gambling on matches that it was barred by law in New York and Connecticut. Since the law specifically barred "nine-pins", it was eventually evaded by adding another pin and thus legally making it a new game. The genius who thought up that simple method of outwitting the law and putting a popular game in motion once more remained modestly anonymous. With the increase in the number of pins, the old diamond formation of nine-pins was abandoned for the triangle set-up of ten-pins that remains the rule to this day. Various organizations were formed to make rules for bowling and supervise competition in the United States but none was successful until the American Bowling Congress, organized Sept. 9, 1895, became the ruling body.

THE ASHES, 1946-47

Australia won three of the five test matches with England and drew the other two to retain "The Ashes," mythical symbol of world cricket supremacy. The term "The Ashes" originated from an obituary notice which appeared in the *Sporting Times* of London in 1882 after Australia had won the test match series for the first time. The notice read:

"In affectionate remembrance of English Cricket, which died at the (London) Oval 29th August, 1882. Deeply lamented by a large circle of sorrowing friends and acquaintances. R.I.P. (N.B.—The body will be cremated and the ashes taken to Australia.)"

Bill Edrich and Denis Compton, England's third wicket pair, set a world batting mark for test cricket competition in the second match of the series with South Africa on June 23, 1947, by putting on 370 runs before their partnership was broken.

Cubans Triumph in Tuna Contest

A six-man team from Cuba won the Alton B. Sharp Trophy, emblematic of the world tuna-angling championship, at the international matches at Wedgeport, Nova Scotia, last September. The Cubans tallied 5,063 points, with the United States second with 3,073 points. The British Empire team finished third and last with 2,487 points

BILLIARDS

APPARENTLY nobody knows where billiards originated. Some trace the game back to ancient Greece or early Egyptian days; others insist it originated in France or England in medieval times. Shakespeare must have believed the Egyptian tale, because in *Antony and Cleopatra* he has Cleopatra saying: "Let's to billiards; come, Charmian." There is an illustration of Louis XIV of France playing billiards in 1694 and using a shovel-shaped stick to set the "cue ball" in motion, from which it is evident that the pointed cue was a later development.

Certainly the game was popular in England and on the Continent in the 17th

and 18th Centuries and early settlers in North America are supposed to have introduced the game here. How to apply "english" to a billiard ball was discovered by Jack Carr, an Englishman, in 1820. A Frenchman named Mingaud is credited with having invented the "draw" shot at about the same time and also to have devised leather tips for wooden cues. Championship competition, amateur and professional, is a modern development in billiards. The first formal professional tournament held in the United States took place in New York in 1863 with eight players competing. The first three-cushion tournament was held in St. Louis in 1878.

Women—Barbara Ann Scott, Ottawa, Canada.

Babe Zaharias Turns Professional

Mrs. Mildred (Babe) Didrikson Zaharias won the women's British golf championship at Gullane, Scotland, in June, 1947, and turned professional the following month after receiving an offer of \$300,000. The victory in the British event was the first for an American-born player. Mrs. Zaharias captured sixteen tournaments in succession before surrendering her amateur status.

Coaching Berths Filled

Robert J. H. (Bob) Kiphuth of Yale and Mike Peppe of Ohio State will coach the United States men's swimming and diving

teams for the 1948 Olympics. Ray Daughters of the Washington A. C., Seattle, will direct the women's squad.

CYCLING

THE ORIGIN and early history of the sport of cycling probably should be sought in the law volumes that contain the court records of decisions in patent cases. There was much dispute and litigation over the priority of inventions and improvements in the development of the bicycle. The fundamental idea of a wheeled frame on which a man could stand or sit and propel himself along a road goes back as far as the time of the Ptolemies in Egypt, but nothing progressive was done about it until a Frenchman named de Sivrac, in 1769, invented a tricycle on which he sat and rolled along by pushing his feet against the ground. There were various two-wheeled and three-wheeled improvements developed by French, German and English experimenters in the next century or so. The frames were better; steering with the front wheel was a new feature; handlebars were of more convenient design and adjustable seats were added. But the rider still pushed himself along with his feet until, about 1820, somebody had the bright idea of rotating the front wheel with a geared device, the rider furnishing the power by

pushing and pulling handlebars mounted on a spindle. Pedals came along about 1840 and, in the case of bicycles, were attached to the front wheel that grew to be much larger than the rear wheel. Solid rubber tires began to replace iron tires in 1869.

There was a long legal dispute about credit for the invention of the "safety bicycle" with two wheels of equal size and pedals attached to a sprocket that, through gears and a chain, applied power to the rear wheel but, in any case, the "safety" or modern bicycle had just about driven the old "high-wheeler" off the roads by 1890. Pneumatic tires were invented in 1888 by J. B. Dunlop, a Scotsman who was a practising veterinarian in Belfast, Ireland, and in a few years all the better bicycles were using pneumatic tires. But when Dunlop tried to patent his invention, it was discovered that a stranger named R. W. Thomson had taken out an English patent on such an idea in 1845. The Pickwick Bicycle Club, founded in London, 1870, was the first bicycle organization. The League of American Wheelmen was organized in 1880.

RIFLE AND PISTOL SHOOTING

Source: Raymond J. Stann, National Rifle Association of America.

The X count is used in most small-bore records to break ties. The X-ring on the target is a circle within the 10-ring and in a case where two or more competitors have the same point score, the one with the most X's is declared the winner. (m) Indicates metallic sight used. (a) Indicates any sight used. V-ring (bull's-eye value 5 points) used instead of x-ring on Army target in Palma Course only.

U. S. Retains Dewar Rifle Cup

A twenty-man rifle squad representing the United States successfully defended the Dewar Cup, symbolic of international team supremacy, in 1947. The U. S. group totaled 7,932 points in its triangular match with Great Britain and Canada. The triumph was the twenty-second for the United States since Lord Dewar of Great Britain placed the trophy in competition in 1919. Great Britain won the cup in 1926 and 1937, while no other country has ever held it.

HANDBALL CHAMPIONS, 1947

National A. A. U. 4-Wall Softball

Singles—Constantine Lewis, Hollywood, Calif.
Doubles—Sam Haber and Joe Samson, New York.

National A. A. U. 1-Wall Softball

Singles—Vic Herschkowitz, Brooklyn.
Doubles—Fred Geller-Frank Gluckler, New York.

National Outdoor Pistol Records

In the pistol records there are three categories: .22 caliber fire, center fire, and .45 caliber. Center-fire pistols or revolvers must be .32 caliber or larger. (s) Slow fire; (t) timed fire; (r) rapid fire. c—Continued firing until a shot scored outside the 10-ring.

.22 Caliber Pistol or Revolver

 Vineyard Lightship and return—De Coursey Fales' NINA (schooner)
 Port Huron to Mackinac—O. A. Johnson's SPOOKIE (cutter)

Berst Makes Record Toss

Frank Berst heaved the 56-pound weight 41 feet 6 inches at the Uniformed Firemen's Association track and field meet at Buffalo, N. Y., on Aug. 3, 1947, to better Matt McGrath's American standard, set at Montreal on Sept. 23, 1911, by 11½ inches.

ARCHERY

ARCHERY goes back through song and story and classic legend to the primeval days when bows and arrows were means of obtaining food and also weapons in warfare, but the invention of gunpowder in the 14th Century brought about a complete change in the hunting field and in the ranks of war. Archery survived only as a sport. One of the oldest annual sporting events in England is the archery contest for "The Ancient Scorton Arrow" (a little silver dart) that has been held each year in Yorkshire since 1673. The tradition

of archery survived in many European countries and many tournaments were held each year until World War II obliterated them. The American Indians, of course, used the bow and arrow until guns came into their hands through early explorers and settlers. Organized archery as a sport in the United States began with the formation of a club called the United Bowmen of Philadelphia in 1828. The sport languished through the Civil War period but was revived by the formation of the National Archery Association in 1878.

NATIONAL TEAM CHAMPIONS, 1947

Saber—Salle Santelli.

Épée—Salle Santelli.

Foil—New York A. C.

Three-weapon—Salle Santelli.

Women's—Fencers Club, New York.

Women's Intercollegiate Champions

Individual—Estelle Osher, Hunter.

Team—Hunter College, N. Y.

The United States team of José R. de Capriles, Albert Wolfe and Dr. Tibor Nyilas, won the first Wilkinson Trophy tourney, held in New York last April. In a round-robin competition involving six trios, including Cuba and Mexico, the U. S. swordsmen beat all five opponents to take the cup. The other teams represented the East, mid-west and Pacific Coast.

Gazel Swim Marathon Victor

Ben Gazel of Toronto won the Canadian National Exhibition ten-mile swim, held on Lake Ontario, Toronto, last August. Gazel's time for the event, held for the first time since 1937, was 4 hours 44 minutes 27 seconds, well above the record

of 4:19:28, set by Frank Pritchard in the last renewal. Second place went to Jerry Kerschner of Columbus, Ohio. The winner received \$5,000, while the runner-up earned \$2,500. Only eight finished out of a starting field of 56.

Carpio of Peru Swims Channel

On Sept. 5, 1947, Daniel Carpio of Peru, a 35-year-old bank clerk, became the first person to swim the English Channel since 1939. Battling powerful three-knot currents and high waves the Peruvian was forced to follow a forty-two-mile route to cross the nineteen-mile wide straits from Cape Griz Nez, France, to Dover, England, in 14 hours 46 minutes.

Blower Swims Irish Sea

Tom Blower of Nottingham, England, conqueror of the English Channel in 1937, last year became the first person to swim the treacherous Irish Sea. Under wretched conditions, Blower, a mill hand, negotiated the twenty-five miles in 15 hours and 25 minutes. He started from Donaghadee, Northern Ireland, and touched land five miles from Port Patrick, Scotland.

FISHING

WORLD RECORDS

Caught with Rod and Reel in Salt Water

Source: International Game Fish Association, Francesca LaMonte, Secretary, American Museum of Natural History.

Species	Lb., oz.	Length	Girth	Where caught	Year	Angler

 Roark

HORSE RACING

Big Red—Man o' War
 Mr. Longtail—Whirlaway
 Old Bones—Exterminator
 The Iceman—George Woolf

Miscellaneous

Boy Wonder—Willie Hoppe
 Calamity Jane—Bobby Jones' putter
 Phog—Forrest Allen
 Human Fish—Johnny Weissmuller
 Iron Man—Reggie McNamara
 Kraut Line—Milt Schmidt, Bobby Bauer and Woody Dumart, Boston Bruins
 Porky—Ed Oliver
 Rocket—Maurice Richard
 Siege Gun—Jesse P. Guilford
 Strangler—Ed Lewis
 The Emperor Jones—Bobby Jones
 The Fastest Human—Charley Paddock
 The Flying Finn—Paavo Nurmi

HARNESS RACING

OLIVER WENDELL HOLMES, the famous Autocrat of the Breakfast Table, wrote that the running horse was a gambling toy but the trotting horse was useful and, furthermore, "horse-racing is not a republican institution; horse-trotting is." Oliver Wendell Holmes was a born and bred New Englander and New England was the nursery of the harness racing sport in America. Racers and trotters were matters of local pride and prejudice in Colonial New England and, shortly after the Revolution, the Messenger and Justin Morgan strains produced many winners in harness racing matches" along the turnpikes of New York, Connecticut, Rhode Island, Massachusetts, Vermont and New Hampshire.

There was English thoroughbred blood in Messenger and Justin Morgan and, many years later, it was blended in Rysdyk's

Hambletonian, foaled in 1849. Hambletonian was not particularly fast under harness but his descendants have had almost a monopoly of prizes, titles and records in the harness racing game. Hambletonian was purchased as a foal with its dam for a total of \$124 by William Rysdyk of Goshen, N. Y. and made a modest fortune for the purchaser.

Trotters and pacers often were raced under saddle in the old days and, in fact, the custom still survives in some places in Europe. Dexter, the great trotter that lowered the mile record from 2:19 $\frac{3}{4}$ to 2:17 $\frac{1}{4}$ in 1867, was said to handle just as well under saddle as when pulling a sulky. But as sulkies were lightened in weight and improved in design, trotting under saddle became less common and finally faded out in this country.

Kentucky Futurity—Hoot Mon	2.04½
Matron—Nymph Hanover	2.09
American—Hoot Mon	2.01¾

*Raced on half-mile track.

CURLING

THE GAME OF CURLING is supposed to be of Dutch origin but it dates back to 1607 in Scotland and grew to be the national sport of that country. The action is something like bowling on ice and, for that matter, it is alleged to be an offshoot of lawn bowling. Circular stones (weight about 35 pounds in the United States, top limit 44 pounds in Great Britain) are sent sliding up and down the rinks toward targets called "tees" at either end. Each player uses two stones and a side or team consists of four players, one of whom is captain or "skip".

Formal competition in curling began with the formation of the Grand Caledonian Curling Club in Scotland on Nov. 5, 1838. The title of the club was changed to "Royal" Caledonian Curling Club when Queen Victoria, with Albert, the Prince Consort, visited Scotland in 1842 and Prince Albert became a patron of the club. Scots who emigrated to Canada and the United States carried their love of the game with them and spread the enthusiasm to such an extent that, where climate permits, curling matches and "bonspiels" have become popular fixtures on the winter sports programs of the northern States and Canada.

CURLING WINNERS, 1947

London Grand National Medal—Schenectady No. 1
Douglas Medal—Ardsley No. 2
Rockton Cup—Utica No. 2
Ten Medal—Utica

April Star, Titan Hanover Break Records

April Star, a 6-year-old chestnut gelding owned by R. L. Craig of Urbana, Ohio, won the mile-and-a-quarter \$50,000 Golden West free-for-all pace at Hollywood Park last season in the world-record time of 2:32. Another world standard was set on the same day, May 3, in the previous race, a mile-and-an-eighth trot, when Titan Hanover was timed in 2:16.2.

Knockout team of four—Joseph E. Low, Harry J. Fishbein, Larry Hirsch, Harry Feinberg, David Clarren, New York.
Mixed teams of four—Detmar Walther, Beverly Hills, Calif.; Mrs. David Eidem, Meyer Schleifer, Betty Bysshe, Los Angeles.
Amateur team of four—Miss Augusta Cantor, New York; Victor Mitchell, Henry Mullaney, Andrew Gabrilovitch, Brooklyn.

HORSE RACING

ANCIENT DRAWINGS on stone and bone prove that horse racing is at least 3000 years old, but Thoroughbred Racing is a modern development. Practically every thoroughbred in training today traces its registered ancestry back to one or more of three sires that arrived in England about 1728 from the Near East and became known, from the names of their owners, as the Byerly Turk, the Darley Arabian and the Godolphin Arabian. The Jockey Club (English) was founded at Newmarket in 1750 or 1751 and became the custodian of the Stud Book as well as the court of last resort in deciding turf affairs.

There was horse racing in this country before the Revolution, but the great lift to the breeding industry came with the importation in 1798, by Col. John Hoomes of Virginia, of Diomed, winner of the Epsom Derby of 1780. Diomed's lineal descendants included such famous stars of the American turf as American Eclipse and Lexington. From 1800 to the time of the Civil War there were race courses and breeding establishments plentifully scattered through Virginia, North Carolina, South Carolina, Tennessee, Kentucky and

Louisiana. In fact, thoroughbred racing was largely a Southern sport and that was one reason why the Confederacy had such excellent cavalry in the Civil War. A century ago crack horses were matched in four-mile races that were run in heats, best two out of three!

The oldest stake event in North America is the King's Plate, a Canadian fixture that was first run in the Province of Quebec in 1836. The oldest stake event in the United States is The Travers, which was first run at Saratoga in 1864. The gambling that goes with horse racing and trickery by jockeys, trainers, owners and track officials caused attacks on the sport by reformers and a demand among horse racing enthusiasts for an honest and effective control of some kind, but nothing of lasting value to racing came of this until the formation of The Jockey Club in 1894. The Jockey Club, composed of fifty members chosen from the aristocracy of the turf, was all-powerful in racing regulation until the State Racing Commissions came into being as a result of mutual betting and the great revenues that came with the tax on the "daily handle".

Cow Pony Defeats Thoroughbred

A quarter-mile winner-take-all match race between Roy Gill's Barbra B., a 4-year-old cow pony, and Charles S. Howard's Fair Truckle, a 4-year-old imported thoroughbred, resulted in the quarter-horse winning by two and one-half lengths. The

event, for a reported purse of \$100,000, was held at Hollywood Park, Inglewood, Calif., on Aug. 4, 1947.

Barbra B., a filly, was timed in 21½ seconds for the distance. Both racers carried 110 pounds.

DIXIE HANDICAP

Fair Truckle and Count Speed Set World Records

Two world records, in successive races, were made at Golden Gate Fields, Albany, Calif., on Oct. 4, 1947. C. S. Howard's Fair Truckle won the Pleasanton Handicap, a

six-furlong dash, in 1:08½, and in the next event Mrs. John D. Hertz's Count Speed ran the mile and one-sixteenth in 1:41.

WOOD MEMORIAL

Jamaica; 3-year-olds; 1 1/16 miles

Run as Wood Stakes prior to 1927. Distance 1 mile and 70 yards from 1925 to 1939, inclusive. Run as Wood Memorial Stakes from 1927 to 1941, inclusive. Run in two divisions in 1944, 1945, and 1947.

Record Equaled in Dead Heat

A dead heat between C. T. Clifford's Te-Tee-See and Walter McCarty's Artillery captured the 1947 running of the Golden Gate Breeders' Handicap at Hollywood Park on June 21. The time for the mile and a sixteenth was 1:41 1/2, equaling the world standard set by Snow Boots at Santa Anita Park in 1946. Mrs. J. D. Hertz's Countess lowered the record to 1:41 at Golden Gate Fields, Albany, Calif., on Oct. 4.

Calumet Sets Earnings Mark

Warren Wright's Calumet Farm last year became the first stable in the history of horse racing to earn more than \$1,000,000 in a single season. Armed's victory in the Washington Park Handicap on Labor Day, Sept. 1, netted \$37,500, to boost Calumet's mark to \$1,012,741. Armed, a gelding, Faultless and Fervent, 3-year-olds, and Bewitch, a 2-year-old filly, were the principal money-winners in the establishment's drive to the million-dollar figure.

Totals		115	31	29	24	816,060

THE JOCKEY CLUB

Though its original charter was dated Feb. 8, 1894, The Jockey Club, parent body of the American turf, might well be considered as having completed its fifty-sixth year of service to thoroughbred racing in 1947 because the Board of Control, forerunner of The Jockey Club, was organized in 1891. Membership is limited to fifty, with The Earl of Derby the only honorary member.

OFFICERS

WILLIAM WOODWARD, *Chairman*; A. H. MORRIS, *Vice-chairman*;
JOSEPH E. DAVIS, *Secretary and Treasurer*

PIMLICO FUTURITY, 1947

(Previous history on page 890.)

Citation, the Calumet Farm's crack 2-year-old, captured the 1947 renewal of the Pimlico Futurity. The colt's victory was worth \$36,875. Citation, ridden by Doug Dodson, carried 119 pounds in annexing the rich fixture.

Attendance, Betting in U. S., 1947

(Previous record on page 888.)

Pari-mutuel wagering in the United States went over the billion mark for the fourth year in succession in 1947, with 24,672,574 fans betting \$1,542,310,470 through Oct. 31.

LEADERS IN 1947

(Through Nov. 25)

Money-winning owner—Calumet Farm, \$1,398,511
 Trainer (winners saddled)—Willie Molter, 144
 Jockey (winners ridden)—Johnny Longden, 283
 Money-winning horse—Armed, \$376,325

Longden Sets Riding Record

Johnny Longden rode four winners at Bay Meadows on Dec. 5 to increase his 1947 total to 304, three over the modern mark made by Jackie Westrope in 1933. Walter Miller, with 388 winners in 1906, holds the all-time record.

FOOTBALL

THE PASTIME of kicking a ball around goes back beyond the limits of recorded history. Ancient savage tribes played football of a primitive kind. There was a ball-kicking game played by Athenians and Spartans and Corinthians 2500 years ago and the Greeks had a name for it: *Episkyros*. The Romans had a somewhat similar game called *Harpastum* and are supposed to have carried the game with them when they invaded the British Isles in the First century, B. C.

Undoubtedly the game known in the United States as Football traces directly to the English game of Rugby, though the modifications have been many and rather sweeping in some directions. There was no formal football on our college lawns well over a century ago and an annual Freshman-Sophomore series of "scrimmages" began at Yale in 1840. But the first formal intercollegiate football game in this country was the Princeton-Rutgers contest played at New Brunswick, N. J., on Nov. 1, 1869, with Rutgers winning by 6 goals to 4. Columbia took to the intercollegiate football field in 1870 and Yale in 1872. On many colleges were playing football in the autumn.

In those old days games were played

with twenty-five, twenty, fifteen or eleven men on a side by mutual agreement. In 1880 there was a football convention at which Walter Camp of Yale persuaded the delegates to agree to a rule calling for eleven players on a side. In 1882 there was adopted the rule requiring the offensive team to make 5 yards in three downs or surrender the ball to its opponents. The game grew so rough that it was attacked as brutal by many critics and some colleges abandoned the sport. Conditions were so bad in 1906 that President Theodore Roosevelt, an enthusiast for all sports, called a meeting of Yale, Harvard and Princeton representatives at the White House in the hope of reforming and improving the game. The outcome was that the game, with the forward pass introduced and some other modifications of the rules inserted, became faster and cleaner and gradually grew to the tremendous popularity it enjoys today.

Professional football, now firmly established, is an outgrowth of intercollegiate football. The first professional game was played in 1895 at Latrobe, Pa. The National Football League was founded in 1921. The All-America Conference went into action in 1946.

1947 CROSS-COUNTRY CHAMPIONS

National A. A. U.—Curtis Stone, Philadelphia

National A. A. U. Team—New York A. C.

N. C. A. A.—Jack Milne, North Carolina

N. C. A. A. Team—Penn State

I. C. 4-A—Robert Black, Rhode Island

I. C. 4-A Team—Manhattan

DiMaggio and Elliott Honored

Joe DiMaggio of the New York Yankees and Bob Elliott of the Boston Braves were chosen as the most valuable players in their respective leagues in 1947 in the annual polls of the 24-man committee of the Baseball Writers Association of America.

SIX-DAY BICYCLE RACING

Bill Anderson of Cleveland and Stan Bransgrove of Australia won the forty-sixth international six-day bicycle race in the Coliseum, Chicago, last October.

WOMEN'S FIELD HOCKEY

A visit by an All-England eleven was a highlight of the United States Field Hockey Association's twenty-fifth anniversary celebration in 1947. The British team proved more than a match for the American players, sweeping the eighteen games on its nation-wide tour and climaxing its trip by defeating the All-America team at the National tourney at the Philadelphia Cricket Club.

GOLF

Ryder Cup Summary, 1947

UNITED STATES 11, GREAT BRITAIN 1

Singles

E. J. Harrison, U. S., beat Fred Daly, 5 and 4.
 Lew Worsham, U. S., beat James Adams, 3 and 2.
 Lloyd Mangrum, U. S., beat Max Faulkner, 6 and 5.
 Ed Oliver, U. S., beat Charles Ward, 4 and 3.
 Sam Snead, U. S., beat Henry Cotton, 5 and 4.
 Byron Nelson, U. S., beat Art Lees, 2 and 1.
 Jimmy Demaret, U. S., beat Dai Rees, 3 and 2.
 Sam King, Great Britain, beat Herman Keiser, 4 and 3.

Scotch Foursomes

Oliver-Worsham, U. S., beat Cotton-Lees, 10 and 9.
 Snead-Mangrum, U. S., beat Daly-Ward, 6 and 5.
 Hogan-Demaret, U. S., beat Adams-Faulkner, 2 up.
 Nelson-Herman Barron, U. S., beat Rees-King, 2 and 1.

MIDGET AUTO RACING, 1947

Henry Renard of Baldwin, N. Y., captured the 100-mile national championship midget auto race at Goshen, N. Y., on Sept. 21. Mike O'Halloran of Lansing, Ill., was first in the 100-mile national test at Langhorne, Pa., on Oct. 12. A crowd of 39,722 saw O'Halloran lower the one-mile Langhorne Speedway mark to 1:04:54.22, nearly two minutes better than the previous record.

Other leading finishers at Langhorne: 2, Paul Mantz, Los Angeles; 3, Chet Gibbons, Paterson, N. J.; 4, Don Brennan, Milwaukee; 5, Bill Schindler, Freeport, N. Y.; 6, Jimmy Carls, Chicago; 7, George Rice, Milford, Conn.; 8, Bill Randall, Wakefield, Mass.; 9, George Marshman, Yerkes, Pa.; 10, Elmer Wilson, Toledo, Ohio; 11, Henry Renard, Baldwin, N. Y.

OTHER A. A. U. CHAMPIONS, 1947

- 10-km. walk—Henry Laskau, New York.
- 15-km. walk—Henry Laskau.
- 20-km. walk—Ernest Weber, New York.
- 25-km. walk—William Mihalo, Detroit.
- 30-km. walk—William Mihalo.
- 40-km. walk—William Mihalo.
- 50-km. walk—John J. Abbate, Philadelphia.
- 15-km. run—Victor Dyrgeall, New York.
- 20-km. run—Mikko Hietanen, Finland.
- 25-km. run—Thomas Crane, New Bedford Club (Mass.).
- 30-km. run—William Steiner, New York.

Hunts Meeting Winners, 1947

- Virginia Gold Cup—Thomas Stokes' Never Worry
- Maryland Grand National—Lawrence Jones' Clifton's Duke
- Maryland Hunt Cup—S. S. Janney, Jr.'s Winton
- My Lady's Manor Point-to-Point—S. S. Janney, Jr.'s Winton
